5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-208**Kate Chow**

To the Port of Oakland,

I'm a resident on Bayfarm Island in Alameda and I'm writing to offer some comments on the Oakland Airport expansion DEIR. 1

I believe the plan is to build 16 additional gates. But in the DEIR there is no explanation of why 16 new gates. Why not 10? Why not 6? What are the reasons that warrants 16 additional gates? 2

In the DEIR there is also no mention or study about how the noise pollution from these additional flights would impact the quality of care and instruction in all of the elementary, middle schools and high schools throughout Bayfarm and the main island, not to mention all the preschools that are here. 3

I'm asking the Port of Oakland to conduct studies on noise and air pollution effects of the airport expansion and that it must also be independently verified. Noise and air quality sensors need to be placed on Bayfarm Island close enough to the OAK airport runways. This is entirely missing in the current DEIR. 4

I live on Bayfarm with 3 children, my husband and my parents who are in their seventies. We are extremely concerned about the noise and air pollution from these additional flights because it would be detrimental to my children's education and my parents' health. My parents are already having a hard time at night as they are being woken up repeatedly by airplane noise. 5

Thank you for your time.

Response to Commenter P-208

1. The commenter's identification as a resident of Bay Farm Island is acknowledged.
2. **Chapter 4** of the EIR provides a discussion of alternatives to the Proposed Project. Any alternatives that contemplated fewer gates and corresponding holdrooms and passenger processing facilities than identified for the Proposed Project would not meet the level of service criteria because it would not provide OAK with industry standard levels of service and, therefore, were not considered for further evaluation

in the EIR. The EIR includes a reasonable range of alternatives to the Proposed Project. Also see Global Response I: Alternatives.

3. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed. See also **Appendix E** and Global Response F: Human Health Risk Assessment.
5. The commenter's statements regarding perceived impacts of the Proposed Project are acknowledged. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed. See also **Appendix E** and Global Response F: Human Health Risk Assessment.

Commenter P-209

Kate Chow

I have 3 kids whose education is disrupted every time a plane flies above their school and a set of elderly parents who aren't sleeping because of airplane noise at night. Expanding OAK will be detrimental to my entire family.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-209

1. The commenter's statements regarding perceived impacts of the Proposed Project is acknowledged. **Table 3.11-12** of the EIR shows that no housing units are within the

65 dB CNEL noise contour associated with aircraft operations at OAK. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of the implementation of the Proposed Project.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Kate Chu

I'm in twelve grade and I'm a member of "Youth Power Climate Action." Our group sponsored an art contest on the theme of environmental impacts of airport expansion..

1

Sophia Satimal one of the winners asked me to read this because she has a class tonight. "People worldwide know that we face storms, heavy flooding, droughts, and wildfires in several parts of the world due to the climate change.. Now you may ask what can you do to reverse the effects of climate change?· The answer to this is simple.. Stop burning fossil fuels.. Flying harms the climate more than any other form of travel per passenger mile.

This project constructing 16 new gates to expand the Oakland airport harms the climate.. The more gates there are the more flights people take and the more pollution and global warming.. In a round trip flight from Oakland to New York City it can produce 1.5 metric tons of CO₂ per passenger.. Isn't that a lot for just a single passenger?· Now imagine how many people travel to New York City on a Boeing 737 which has approximately 143 seats.. Multiply 143 passengers by 1.5 metric tons of CO₂.. The number is 215 metric tons of CO₂ per round trip flight to New York City.. And then we are talking about adding 16 more gates at the Oakland airport?· Think about it. We're producing 215 metric tons of CO₂ per flight without the additional gates.. What would happen if we added the 16 gates; the severe climate emergency and we need to take action.. Thank you.

2

Response to Commenter P-210

1. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E**.

Commenter P-211

Achilles Chua

This is Achilles Chua from DES Architects and Engineers. I have a follow-up question. Does this modernization also include renovation of existing airport lounges and eateries?

1

Response to Commenter P-211

1. The Proposed Project includes modernization of the existing terminals which may include upgrades/changes to concession areas. Details of the specific improvements would be addressed during design.

Commenter P-212

Achilles Chua

And I represent DES Architects and Engineers.. And, yes, we found this webinar very interesting.. And our comment, this is just for Terminal 1 and 2, and that's all we have for now.

1

2

Response to Commenter P-212

1. The commenter's statement regarding the webinar is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project.

Commenter P-213**Patrick Chung**

Hello,

We have serious concerns surrounding noise pollution associated with the proposed airport expansion onto the North Field. While I understand that living in close proximity to an airport comes with some noise, the sound is unbearably loud when a commercial jet takes off over our neighborhood in Alameda. Its significantly louder than the current runway which runs adjacent with planes taking off over the water.

1

Can you build a second runway parallel to the current runway out in the bay?

2

Have there been any air and noise impact studies done in the area directly under the take off path in alameda?

3

Please consider alternatives to utilizing the North Field for your expansion plans, the noise and pollution will significantly impact the homes and schools that are located directly under the flight path.

4

Response to Commenter P-213

1. The commenter's statements regarding perceived impacts of the Proposed Project is acknowledged. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No changes in runway use or runway construction are included in the Proposed Project.
3. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively.

Commenter P-214**Patrick Chung**

The noise pollution will become unbearable. It will impact both home owners as well as interrupt students at the many local preschool and elementary schools.

Commenter P-215

Barbara Clabots

Expanding airports under today's climate emergency is unfathomable. I have chosen to fly less because of this climate crisis. Do not proceed with an expansion.

1

Response to Commenter P-215

1. The commenter's opposition to the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-216

Nikki Clark

There is way too much noise and pollution from all of the planes.

1

Response to Commenter P-216

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively.

Commenter P-217

Roxanne Clement

As a neighbor of the airport for 30 years we have lived with harmony as the take offs and landings are directed over the water. But repairs and discussion of expansion are worrisome as take offs are currently directly over our home every 5-10 minutes 9/23-24-25 and since our homes were not built with sound limiting windows we are currently exposed to overwhelming noise. Bay Farm school is also now in the flight path and I'm also concerned about jet fuel and gasses emitted when flights are directly overhead. How will the Port of Oakland mitigate these issues if expansion of the airport includes North Field and our neighborhood?

1

2

3

Response to Commenter P-217

1. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK.
2. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
3. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.

Commenter P-218**Roxanne Clement**

Please stop consideration of this expansion immediately. This expansion threatens the health and safety of our neighborhoods which will suffer direct fly overs with additional noise, pollution, and safety issues.

1

Response to Commenter P-218

1. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-219**Trish Clifford**

We need to stop using fossil fuels as soon as possible.

Commenter P-223**Andy Cohen**

Ms. Colleen Liang,
Acting Director Port of Oakland Environmental Programs and Planning Division

530 Water Street Oakland, CA 94607

SUBJECT: OAKLAND INTERNATIONAL AIRPORT TERMINAL MODERNIZATION AND
DEVELOPMENT PROJECT DRAFT EIR (SCH#: 2021050164)

Dear Ms. Liang,

Thank you for the opportunity to submit comments about the proposed Environmental Impact Report ("report") concerning the Oakland International Airport Terminal Modernization and Development Project Draft EIR.

1

As homeowners who reside in the city of Alameda in the airport-adjacent community of Harbor Bay, we are gravely concerned that the report submitted by the Oakland Port Authority ("the Port") fails to fulfill its duty under federal and state law to provide a sufficiently transparent or substantive analysis of the impact of the proposed airport expansion on the health and safety of local residents and airport workers. Specifically, we question the conclusion by the Port that the increased air pollution will have, among other things, a de minimis to negative impact (defined as a reduction from 2019 to future levels) on the cancer risks of residents who live in communities close to the North Field that is the locus of the expansion, compared to what the cancer risks would be if the airport expansion project did not occur.

2

1. The report overlooks additional requirements that may apply to a project within a non-attainment area and does not adequately address the project's impact on air pollution.

3

As stated by the Port in the report, Alameda County is a federally categorized nonattainment area in terms of air pollution for certain pollutants, such as ozone and fine particulate matter.

The American Lung Association in its State of the Air Assessment has continually graded Alameda County as receiving an "F" in terms of fine particle and ozone pollution, which is known to raise the risk of cancer, cardiovascular disease, asthma, and other health conditions.

As you know, additional studies and mitigation steps (such as a dispersion analysis conducted by the Federal Aviation Agency) may be required to prevent deterioration of air quality in nonattainment areas from major sources of new pollution. However, the Port has concluded that the future potential cancer risk of maximally exposed individuals in the surrounding communities would be less than the cancer risks under the 2019 operating scheme. In effect, the Port asserts that the new pollution from the airport is not a major source that would trigger additional studies and mitigation.

However, the analysis concluding that the cancer risks from increased air pollution by the expansion is below de minimus levels is confusing, somewhat arbitrary, and not sufficiently transparent.

Given the large scale of the expansion, it makes little sense that the project would create only a de minimis level of particulate matter, ozone, and other pollution either during construction and its subsequent expansion phases. However, the Port in Appendix E to the EIR reasons that the aggregate air quality in the area is likely to improve due "to state and federal regulations that require reductions in on-road and off-road truck and equipment emissions for newer model year vehicles." (Appendix E, p. 32). Thus, the overall air quality following the expansion will, according to the Port, be better than the air quality during airport operations in 2019.

But pointing to a potential decrease in aggregate air pollution caused by more rigorous trucking and equipment regulatory standards doesn't sufficiently detail the actual impact of

increased airport pollution (both from construction and expanded operations as well as airline emissions) on air quality in the area.

It also ignores that, even if some sources of air pollution may decrease over time, other sources, such as wildfires, are rising at a catastrophic level and that pollution caused by growth in the trucking industry and increasing congestion at the Port of Oakland from transport vehicles, loading and unloading, cargo vessels, etc. may erode regulatory-related gains. In addition, the expansion of the airport is intended to generate more passenger activity, package delivery, and a vastly expanded international flight schedule that will result in increased air pollution from support vehicles, passengers driving to and from the airport, airplanes taxiing on the runway, and flight-related emissions, none of which appear to be counted in the scope of this report. Thus, the assumption that the reduction of emissions by the trucking industry would sufficiently offset new pollution by the airport expansion appears to rest on several rose-colored assumptions.

2. The Port's failure to consider the impact of airline emissions undermines the educational and informative purposes of an Environmental Impact Report

The Port also does not detail the impact of increased emissions from airlines under the expanded plan because it claims not to be legally liable for such emissions. This misapprehends one major purpose of an Environmental Impact Report, which is not to assign legal liability for potential pollution, but to provide a detailed report on all significant environmental and health impacts flowing from a project, such that government and other entities can make sound decisions concerning the project.

Here, it is hard to argue that increased airline emissions are not significant to the decision making involved in assessing the environmental and health impacts of the airport expansion. To suggest that the airport has no responsibility to monitor and account for this potential rise in pollution would seemingly undermine the educational and informational purpose behind an Environmental Impact Report.

3. The Port does not adequately detail whether state or federal funding imposes additional environmental requirements

In addition to our concerns about air pollution and health impacts from the project, we would like to understand the sources of federal and state funding that the Port is considering for the proposed expansion. The Biden administration recently allocated infrastructure funds, including a reported billion dollars per year over the next five years, that is arguably motivating several immediate airport expansion projects in the near-term future, including ones at Seattle-Tacoma and Iowa airports. <https://airport-world.com/us-airport-expansions-and-renovations-in-2023will-be-robust/>

To the extent that the Port plans to use infrastructure funding and other sources of state and federal funding, additional obligations may apply to the plan for the expansion or the environmental impact analysis. Thus, we are curious about which sources of public funding the Port intends to use to fund the expansion.

Thanks for your time and attention,
The Cohen family

Response to Commenter P-223

1. The commenter's statement regarding the public involvement process is acknowledged.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-Airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed. The comments regarding other vehicle emissions are acknowledged. See also **Appendix E** and Global Response F: Human Health Risk Assessment.
4. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Thus, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
5. The Port would likely seek a variety of funding sources to fund the Proposed Project. However, federal funds require completion of environmental processes prior to assessing project funding eligibility.

Commenter P-224**Andy Cohen**

Ms. Colleen Liang,
 Acting Director Port of Oakland Environmental Programs and Planning Division
 530 Water Street Oakland, CA 94607

SUBJECT: OAKLAND INTERNATIONAL AIRPORT TERMINAL MODERNIZATION AND DEVELOPMENT PROJECT DRAFT EIR (SCH#: 2021050164)

Dear Ms. Liang,

Thank you for the opportunity to submit comments about the proposed Environmental Impact Report ("report") concerning the Oakland International Airport Terminal Modernization and Development Project Draft EIR.

1

As homeowners who reside in the city of Alameda in the airport-adjacent community of Harbor Bay, we are gravely concerned that the report submitted by the Oakland Port Authority ("the Port") fails to fulfill its duty under federal and state law to provide a sufficiently transparent or substantive analysis of the impact of the proposed airport expansion on the health and safety of local residents and airport workers. Specifically, we

2

question the conclusion by the Port that the increased air pollution will have, among other things, a de minimis to negative impact (defined as a reduction from 2019 to future levels) on the cancer risks of residents who live in communities close to the North Field that is the locus of the expansion, compared to what the cancer risks would be if the airport expansion project did not occur.

1. The report overlooks additional requirements that may apply to a project within a non-attainment area and does not adequately address the project's impact on air pollution.

As stated by the Port in the report, Alameda County is a federally categorized nonattainment area in terms of air pollution for certain pollutants, such as ozone and fine particulate matter.

The American Lung Association in its State of the Air Assessment has continually graded Alameda County as receiving an "F" in terms of fine particle and ozone pollution, which is known to raise the risk of cancer, cardiovascular disease, asthma, and other health conditions.

As you know, additional studies and mitigation steps (such as a dispersion analysis conducted by the Federal Aviation Agency) may be required to prevent deterioration of air quality in nonattainment areas from major sources of new pollution. However, the Port has concluded that the future potential cancer risk of maximally exposed individuals in the surrounding communities would be less than the cancer risks under the 2019 operating scheme. In effect, the Port asserts that the new pollution from the airport is not a major source that would trigger additional studies and mitigation.

However, the analysis concluding that the cancer risks from increased air pollution by the expansion is below de minimus levels is confusing, somewhat arbitrary, and not sufficiently transparent.

Given the large scale of the expansion, it makes little sense that the project would create only a de minimis level of particulate matter, ozone, and other pollution either during construction and its subsequent expansion phases. However, the Port in Appendix E to the EIR reasons that the aggregate air quality in the area is likely to improve due "to state and federal regulations that require reductions in on-road and off-road truck and equipment emissions for newer model year vehicles." (Appendix E, p. 32). Thus, the overall air quality following the expansion will, according to the Port, be better than the air quality during airport operations in 2019.

But pointing to a potential decrease in aggregate air pollution caused by more rigorous trucking and equipment regulatory standards doesn't sufficiently detail the actual impact of increased airport pollution (both from construction and expanded operations as well as airline emissions) on air quality in the area.

It also ignores that, even if some sources of air pollution may decrease over time, other sources, such as wildfires, are rising at a catastrophic level and that pollution caused by growth in the trucking industry and increasing congestion at the Port of Oakland from transport vehicles, loading and unloading, cargo vessels, etc. may erode regulatory-related gains. In addition, the expansion of the airport is intended to generate more passenger activity,

package delivery, and a vastly expanded international flight schedule that will result in increased air pollution from support vehicles, passengers driving to and from the airport, airplanes taxiing on the runway, and flight-related emissions, none of which appear to be counted in the scope of this report. Thus, the assumption that the reduction of emissions by the trucking industry would sufficiently offset new pollution by the airport expansion appears to rest on several rose-colored assumptions.

2. The Port's failure to consider the impact of airline emissions undermines the educational and informative purposes of an Environmental Impact Report

The Port also does not detail the impact of increased emissions from airlines under the expanded plan because it claims not to be legally liable for such emissions. This misapprehends one major purpose of an Environmental Impact Report, which is not to assign legal liability for potential pollution, but to provide a detailed report on all significant environmental and health impacts flowing from a project, such that government and other entities can make sound decisions concerning the project.

Here, it is hard to argue that increased airline emissions are not significant to the decision making involved in assessing the environmental and health impacts of the airport expansion. To suggest that the airport has no responsibility to monitor and account for this potential rise in pollution would seemingly undermine the educational and informational purpose behind an Environmental Impact Report.

4

3. The Port does not adequately detail whether state or federal funding imposes additional environmental requirements

In addition to our concerns about air pollution and health impacts from the project, we would like to understand the sources of federal and state funding that the Port is considering for the proposed expansion. The Biden administration recently allocated infrastructure funds, including a reported billion dollars per year over the next five years, that is arguably motivating several immediate airport expansion projects in the near-term future, including ones at Seattle-Tacoma and Iowa airports. <https://airport-world.com/us-airport-expansions-and-renovations-in-2023will-be-robust/>

To the extent that the Port plans to use infrastructure funding and other sources of state and federal funding, additional obligations may apply to the plan for the expansion or the environmental impact analysis. Thus, we are curious about which sources of public funding the Port intends to use to fund the expansion.

Response to Commenter P-224

1. The commenter's statement regarding the public involvement process is acknowledged.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed. The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-Airport worker locations but would be considered significant at on-Airport worker locations

during incremental operations of the Proposed Project. See also **Appendix E** and Global Response F: Human Health Risk Assessment.

3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see also **Appendix E**). The comments regarding other vehicle emissions are acknowledged.
4. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
5. The Port would likely seek a variety of funding sources to fund the Proposed Project. However, federal funds require completion of environmental processes prior to assessing project funding eligibility.

Commenter P-225

Silvia Colmenares

I live on Bay Farm in Alameda, CA - we are literally 7 minutes by car from OAK airport. I've lived 12 years here and it used to be tolerable, but now it is frequent airplanes overflying right over our homes, sometimes in the middle of the night, waking us up. This is a community where most of us work and have to get up early, many of us have to commute and have a long day of work ahead, so we need our sleep. More runways will mean more frequent airplanes disrupting our sleep. Please stop this!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.
--

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-225

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

I live directly under the flight path for planes taking off from the North Runway. Over the last few weeks, the North Runway has been used more extensively causing EXTREME noise pollution as well as the increased environmental impact of neighborhoods directly under the flight path and the greater surrounding area. In some cases, there is a minimum of 60-90 seconds between planes flying directly overhead. Even without the use of the North runway, expansion of the airport will only make this impact worse. More Flights = More Pollution; More Flights= More Noise. Not to mention reduction in property values for those of us living

1

2

on Bay Farm Island. There are alternative to expansion of this local/regional airport and it should NOT include 17 new gates. I am urging/begging the Port of Oakland to stop the planned Oakland Airport expansion.

See also Global Response A: Aviation Forecast.
2. Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and

conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Arielle Crenshaw

To the Attention of the Port of Oakland and City of Alameda,
 I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents. I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion. I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens. Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

Response to Commenter P-232

1. The commenter's statement regarding the opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see also **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-Airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
5. **Sections 3.3 and 3.7** of the EIR summarize criteria pollutant and GHG emissions, respectively, associated with the Proposed Project. The air quality assessment was conducted in accordance with FAA guidelines for assessing environmental impacts and BAAQMD 2017 CEQA Guidelines. Consistent with those guidelines, the existing conditions included using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest, most representative of the general study area.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

• Aviation is hard to decarbonize and biofuels are not the answer.	4
• It's too much noise. More Flights= More noise.	5
• Sea level rise threatens shoreline development.	6
• Labor rights are at stake.	7
• Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	10

Response to Commenter P-234

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of

aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Julia Crick

To the Attention of the Port of Oakland and City of Alameda,

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity.

On a personal level, we moved to Bayfarm last year and purchased our house with the knowledge of the current flight patterns and the fact that our house is .8 miles from the end of the North runway. The private smaller jets that fly from that runway are a nuisance but manageable when it comes to sound and frequency (fact they do not fly early am or late at night and less often). During the recent weekend work on the South runway and commercial jets flew directly over our house, it was insanely loud, very frequent (every 5-10 mins) and a noticeable difference in quality of life both inside and outside the house. Our 3 year old was so affected by the loud take offs he refused to play outside or even go to the park nearby. Not only does this make living on BayFarm a negative experience for our family, the lasting effect of declined property values effect our future. Who will want to live here, how can Alameda support this plan.

With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). We Bay Area residents do not need more expansion to our single airport. We especially do not need expansion of people coming to further clog all our systems.[Please put humans over greed! More Flights= More Pollution. I live here and want to breathe. Please put life over profit!	1 2
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	3
11. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	4
12. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	5
13. Aviation is hard to decarbonize and biofuels are not the answer.	6
14. It's too much noise. More Flights= More noise.	7
15. Sea level rise threatens shoreline development.	8
16. Labor rights are at stake.	9
17. Inequity: flying is an elite privilege with high costs for everyone else.	10
18. We have alternatives. Invest in Rail.	11
19. We have alternatives like remote business and conferencing.	
20. We need to shift towards climate-just transportation.	12

Response to Commenter P-239

1. The commenter’s opposition to the Proposed Project is acknowledged.
2. The commenter’s statement regarding air quality and priorities is acknowledged. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR.
3. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental

Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-240

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-241**Christine Crouther**

Leave Oakland Airport as-is (there are plenty of empty gates that can be utilized more efficiently) - we already have enough pollution and chaos as it is - as Bay Farm residents and parents of two babies, we chose this place to live for the schools and family-oriented neighborhood, but the constant and unpredictable noise levels are too much already.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

Commenter P-242
Madeleine Cule

I live just across the water in San Francisco and I'm also here with various colleagues from Extinction Rebellion San Francisco Bay Area and I'm here because the effects of climate change are completely undeniable at this point and the forecasts get even worse. Expanding Oakland Airport will increase demand for aviation one of the most damaging forms of emission from transportation and while flights are responsible currently for only two percent of global conduct outside emissions they're responsible for eleven percent of emissions in the Bay Area and we share a responsibility to reduce this however we can and as rapidly as we can to protect us from the worst possible impacts of climate change.

The airport expansion will give rise to a significant demand for aviation taking us in exactly the wrong direction and will make reaching local, regional, State, and national climate goals completely impossible.. And thinking holistically these additional emissions are avoidable by instead investing in lower transport, lower carbon forms of transportation, and expansion and demand isn't completely inevitable.. And I'm frankly a little perplexed that we are moving in the wrong direction and I'm asking the Port to think holistically and take the broadest possible view of the environmental impact that they can rather than the narrowest possible to protect all of us.. Thank you, very much.

Response to Commenter P-242

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in

aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Thus, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. See also Global Response G: Greenhouse Gas and Climate Change.

2. See response to Comment #1 of this letter.
3. The Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.

Commenter P-243

Madeleine Cule

I oppose expansion of aviation infrastructure - we need fewer flights. Please invest in alternatives with lower carbon emissions.

Commenter P-244
Madeleine Cule

Dear Port of Oakland Commissioners and team,

1

I am a resident of the San Francisco Bay Area and am deeply concerned about the climate crisis and our inadequate response.

The Draft EIR on the Oakland Airport Expansion ignores the effect that the expansion would have on increasing numbers of flights and increased passenger demand. This makes no sense and makes it harder for the region and state to reach our climate goals.

Many of the destinations served by Oakland airport are already reachable via Amtrak or other ground services, with much lower CO₂ emissions per passenger mile. We should prioritize making these services more convenient and available, and not expand infrastructure for air travel. I encourage the port to think more broadly about transportation needs, and to reject this project.

Response to Commenter P-244

1. The commenter's concerns about climate change are acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
3. The commenter's statement regarding a shift to other modes of transportation is acknowledged. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

The following question is from a peer reviewed article readily available on PubMed. Does night-time aircraft noise trigger mortality? A case-crossover study on 24 886 cardiovascular deaths Apolline Saucy

1

The authors conclude: "Our findings suggest that night-time aircraft noise events may trigger cardiovascular deaths, which would explain 3% of all cases of death from cardiovascular cause in our population living in the vicinity of an international airport. Does the Port of Oakland agree with these findings? Please let me know if you need help accessing this article- easily accessible on PubMed-happy to send it to you"

Response to Commenter P-246

1. The commenter's reference to a study is noted. **Section 3.11** of the EIR provides an analysis of the noise impacts. See also Global Response D: Noise.

Commenter P-247

Don Curtis

A question from this article: Does night-time aircraft noise trigger mortality? A case-crossover study on 24 886 cardiovascular deaths Apolline Saucy. European Society of Cardiology 2021

1

In the introduction, they say "meta-analyses investigated the cardiovascular health effects of aircraft noise,^{4,5} providing the evidence of associations with IHD,⁶ including the incidence of hypertension (OR = 2.26 per 10 dB increase in night aircraft noise),⁷ myocardial infarction,^{8,9} heart failure,⁹ (ischaemic) stroke,^{5,6,8} and arrhythmias.⁷

The article listed above and the references they use are all more current than any of the references you used in the DEIR. Do you disagree with the findings of the author listed above? Also, why are the references you use in the DEIR so old and outdated?

Response to Commenter P-247

1. The commenter's reference to a study is noted. **Section 3.11** of the EIR provides an analysis of the noise impacts. See also Global Response D: Noise.

Commenter P-248**Don Curtis**

The following question is from Investigation of environmental justice analysis in airport planning practice from 2000 to 2010Amber Woodburn McNair* 2020. Available on PubMed. This is peer reviewed.

1

The authors conclude "the social costs of collective airport expansion are unclear and likely underestimated. This study identifies two limitations that undermined the environmental justice analysis throughout the airport sample: (1) inconsistent methodological choices impeded the detection of impacts and, (2) narrative interpretations tended to 'null' the finding even when impacts were detected.

Please respond to these issues. Again, over 90% of the citations you use in the DEIR are over 5 years old. Is it fair to base future public policy on dated evidence?

Response to Commenter P-248

1. The commenter's reference to a study is noted. **Section 3.11** of the EIR provides an analysis of the noise impacts. See also Global Response D: Noise.

Commenter P-249**Don Curtis**

The DEIR in its current form is not representative of the body of literature that is available regarding the environmental impacts on human health. Nearly all the citations used in the current DEIR are more than five years old. Dated references is an issue because science is rapidly changing and public policy should reflect current, not dated literature.

1

An excellent source of current biomedical scientific evidence is the database called PubMed. There are over 36 million articles on PubMed. All 36 million articles are from peer reviewed journals, where each article is reviewed for accuracy. It is an excellent source of current and accurate evidence regarding environmental impacts and human health. To access and search PubMed you input search terms such as "Air Pollution, Aircraft", or "Aviation Heath Effects" or "Particulate Matter, Aircraft." When these three search terms were used, we found hundreds of articles recommended from PubMed. The 30 most current and relevant articles are something i can send to you, yet sadly your portal does not allow me to send them. Sadly, none of these articles are included as references in the current DEIR. Our question is how can public health be protected if current science is not followed? Does the Port of Oakland believe in Science???

2

Response to Commenter P-249

1. The commenter's statement regarding citations is noted.
2. **Section 3.3** of the EIR discusses air quality. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not; no significant air quality impacts would occur because of the implementation of the Proposed Project. See also Global Response A: Aviation Forecast.

Commenter P-250**Don Curtis**

A review of health effects associated with exposure to jet engine emissions in and around airports. 2021 Environmental Health Katja M. Bendtsen¹

1

The authors of the above article state: "Particle numbers near airports are significantly higher than away from airports and jet engines are a significant source of UFP. This means that urban areas in the vicinity of airports are at risk of increased exposure to UFP" If this is true, why is there not a UFP monitor on Harbor Bay Island, likely the area most affected by jets taking off?? Thank you for answering and reading the article.

Response to Commenter P-250

1. **Section 3.3** of the EIR discusses air quality. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. No significant air quality impacts would occur because of the implementation of the Proposed Project. See also Global Response A: Aviation Forecast.

Commenter P-251**Don Curtis**

My question is in regards to the following article which is a peer reviewed article in a prestigious journal readily available on PubMed but not referenced in your DEIR. Maternal exposure to aircraft emitted ultrafine particles during pregnancy and likelihood of ASD in children. 2023 Environmental International Sarah A. Carter

1

The authors finds were that " Maternal exposure to aircraft PM0.1 during pregnancy was associated with increased risk of ASD diagnoses in children." ASD is Autism. Do you agree with the authors?

If you want me to send a full text of the article, please let me know

2

Response to Commenter P-251

1. **Section 3.3** of the EIR discusses air quality. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. No significant air quality impacts would occur because of the implementation of the Proposed Project. See also Global Response A: Aviation Forecast.
2. The commenter's statement regarding articles is noted.

Commenter P-252**Don Curtis**

The existing DEIR is a plan to create even more of a climate crisis. We wake up daily seeing headlines of human suffering caused by climate crisis; floods, tornadoes, raising sea levels, starvation, and uninhabitable areas of the world. Science shows that air transportation contributes more CO₂ than the entire country of Germany, and approximately 100 times more than a train or bus. Public policy should support clean energy and transportation, not expand infrastructure that results in climate change.

1

Response to Commenter P-252

For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-255

Maxine Daniel

We are in a climate crisis and extra planes will cause even more Global Warming. We are constantly pumping water to keep the runways clear. More planes will expose our frontline communities to even more noise and pollution. Stop this expansion project and I propose a limit to the number of planes flying. After all, flying is an elite privilege that is costing all of us our health. There are alternatives to flying, for example, rail, remote business, and conferencing. I personally oppose the OAK expansion.

1

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

3

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.
- We have alternatives. Invest in Rail.
- We have alternatives like remote business and conferencing.
- We need to shift towards climate-just transportation.

Response to Commenter P-256

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. Thus, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Section 15202(d) of CEQA states: "A draft EIR or Negative Declaration should be used as a basis for discussion at a public hearing. The hearing may be held at a place where public hearings are regularly conducted by the Lead Agency or at another location expected to be convenient to the public."

The public hearings held by the Port, at a commercial hotel, behind a guard, far from the East Oakland neighborhoods and the Alameda neighborhoods that would be most affected by the increased noise and air pollution caused by increased air traffic, were not "convenient to the public," in violation of CEQA.

Response to Commenter P-258

1. The commenter's statement regarding CEQA is noted. **Chapter 6** of the EIR provides information regarding public outreach associated with the publication of the

Draft EIR. See also Global Response E: Environmental Justice and Community Engagement.

2. The public meetings for the Draft EIR, held in Oakland in person and virtually by Zoom, met the CEQA requirements per Sections 21092.2 and 15087 of the CEQA Guidelines.

Commenter P-259

Janet Davis

There is much information now about the harmful air pollution from airplane emissions, no way should the Oakland Airport expand. Also the constant noise of planes every few minutes flying overhead means one cannot enjoy a peaceful walk outside. The airport noise is bad for everyone's nerves and health.	1 2
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	3

we just don't need more of OAK. I like that there's natural space around the airport and I have never seen the airport so crowded that it seemed like more gates were needed. I'd personally find a bigger OAK to be unappealing. I HATE SFO for this reason, it is too much stuff. Let OAK just be the best little OAK it can be, don't try to be the next big effing thing.

1

But most of all, I'd rather have a healthier planet than more damn planes. I live very nearby and would not welcome more air traffic, more pollution, more of all the crap. please just stop.

Response to Commenter P-264

1. The commenter's statement regarding the Proposed Project is noted.

Commenter P-265**Sharrese Dekock**

Dear Port of Oakland,

We have lived in the same house on Bayfarm in Alameda for 33 years Through the years the airplane noise and become worse, especially when the North field is used. In fact, use of the north field has become too frequent. Seven years ago we needed to replace our double pane windows, we decided to get triple pane. You should be in our house to hear the deafening sounds of the planes flying over/ near our house. It's so loud you would not believe we have triple pane windows. With your expansion plans, it will be unbearable. You have stated you have monitors, but you placed them in the wrong locations. It's easy to say it won't affect us when you out them miles away. Put them in our backyards! Simple.

On the subject on monitors, air pollution particulate monitors also need to placed in Bayfarm, not way out on Oakland. You are welcome to put a monitor on our patio and front courtyard. There's constant black airline soot in the windows, on the patio and plants. I'll wash down the patio and a day or two later it's the same mess. What's that doing to our lungs, and the extensive wildlife that surrounds us?

The huge increase in airplane traffic over our homes and all of Alameda puts our city greatly at risk. There are many birds, and a bird strike (or any other type of airline disaster) is a real possibility. If that happened over Alameda it would a horrible tragedy from which our city could not recover.

I understand you need to modernize, but to expand and dramatically affect all our lives is unacceptable and irresponsible.

Response to Commenter P-265

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur because of the implementation of the Proposed Project.
2. **Section 3.3** of the EIR discusses air quality. No significant air quality impacts would occur because of the implementation of the Proposed Project.
3. **Sections 3.4** of the EIR provides an analysis of the biological resource impacts that would occur as a result of the implementation of the Proposed Project.
4. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-266**E Delli Gatti**

I sat on the OAK Roundtable Noise Forum for over 21 years. Noise was an issue 20 Years Ago Fast Forward to Today Nothing Has Changed; Jet Noise Still Remains A Problem And In Fact Has Gotten Worse!!!!

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 2
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 3
- Aviation is hard to decarbonize and biofuels are not the answer. 4
- It's too much noise. More Flights= More noise. 5
- Sea level rise threatens shoreline development. 6
- Labor rights are at stake. 7
- Inequity: flying is an elite privilege with high costs for everyone else. 8
- We have alternatives. Invest in Rail. 9
- We have alternatives like remote business and conferencing. 10
- We need to shift towards climate-just transportation. 11

Response to Commenter P-266

1. **Section 3.11** of the discusses noise impacts. No significant noise impacts would occur because of the implementation of the Proposed Project.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-267

I sat on the OAK Roundtable Noise Forum for over 21 years. Noise was an issue 20 Years Ago Fast Forward to Today Nothing Has Changed; Jet Noise Still Remains A Problem And In Fact Has Gotten Worse!!!! OAK Airport Needs To Conduct An EIR and Have It Included As Part Of It? s Airport Modernization Plan Per State, Local and FAA Regulations!!!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-267

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur because of the implementation of the Proposed Project.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-268**Stephen Demoulin**

The worst part about all this expansion is the increasing noise & pollution. Bay Farm Island residences are mostly family owned. People generally are here to raise their families and work hard to support themselves & their families. There have already been too many jets flying over our homes at unauthorized times ((SAM)). People are still trying to sleep ! I have reported these problems to the Port of Oakland?.but still it continues. I will assume these unauthorized fly overs will get worse as the airport expands. Therefore, almost everyone out here is against the expansion.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-268

1. The commenter's statement regarding nighttime noise is acknowledged.

Appendix M of the EIR provides a Sleep Disturbance Study associated with nighttime flights at OAK. **Section 3.11.3.2** of the EIR indicates that the change in future aircraft operations noise conditions (i.e., in 2028 and 2038) compared to existing conditions is attributable to forecast passenger activity and aircraft operations that are anticipated to occur at OAK with or without the Proposed Project. Therefore, the Proposed Project would be the same as future conditions without the Proposed Project in terms of the number of aircraft operations, the type of aircraft operating, and the timing of aircraft used at OAK. For a further discussion of forecast operations, see **Section 2.4** and **Appendix C** of the EIR and Global Response B: Aviation Forecast. See also Global Response D: Noise.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-276**Alice Dockter**

I am against the expansion of the Oakland airport primarily because of environmental concerns -- pollution and noise. Airport operations create significant and unavoidable emissions. Aviation fuel is the largest source of lead emissions in the U.S.

1

Response to Commenter P-276

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain

authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. Thus, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. See also Global Response A: Aviation Forecast.

Commenter P-277

Ahna Dominksi

I am opposed to this huge expansion of the Oakland airport. My neighborhood in Pacifica, and my place of business in Hayward, CA are currently experiencing excessive jet noise and pollution from jets flying from Oakland. Jets fly over my place of work in Hayward all day long, then travel over my house in Pacifica! We all can not handle the current level of noise & pollution and you want to add another 50% more to this existing problem?

Nothing has been done on behalf of Oakland airport. Planes could have flew higher, alternated flight plans, but nothing has been done to help those on the ground have SOME peace & quiet.

No expansion of the Oakland Airport.

1

2

Response to Commenter P-277

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur because of the implementation of the Proposed Project.
2. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-278

Keith Dong

To the Attention of the Port of Oakland and City of Alameda,
I share many concerns with my Bay Farm Island neighbors, who strongly oppose the
proposed expansion of Oakland Airport. This project will greatly impact residents and
schools in its vicinity. With an increase of departing flights and increased usage of the North
Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would
mean louder, more frequent noise disturbances and jet fuel released directly over Alameda
residents and schools. Neighborhoods closest to the South Field runway already experience
an average sound level greater than the FAA regulated 65dB from aircrafts departing from
Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect
impacts like decreased property values, environmental/wildlife concerns, and increased
vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in
residential areas, various studies indicate that impacts of aviation emissions remain under
examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases,
particles, and ultra particles in a residential area in Boston, MA, concentration of all gases
and pollutants at the residential area greatly exceeded those measured at regulatory
monitored sites. Another systematic review of the impact of commercial aircraft activity
identified dangerous and adverse health impacts, including increased rates of premature
death, preterm births, decreased lung function, oxidative DNA damage and childhood
leukemia. These results show the pressing need to understand the direct impact of air

1

2

4

pollutants from the Oakland Airport on Alameda residents. I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion. I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens. Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

5

6

7

8

Response to Commenter P-278

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur because of the implementation of the Proposed Project.
3. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.
4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed. The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations, but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
5. **Sections 3.3 and 3.7** of the EIR summarize criteria pollutant and GHG emissions, respectively, associated with the Proposed Project. The air quality assessment was conducted in accordance with FAA guidelines for assessing environmental impacts and BAAQMD 2017 CEQA Guidelines. Consistent with those guidelines, the existing conditions included using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest, most representative of the general study area.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-279**Andrea Dorn**

TI urge you to reconsider the Oakland airport expansion. More planes means more air and noise pollution.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-279

1. The commenter's opposition to the Proposed Project is acknowledged. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-280
Elizabeth Dortch

We all need to change transportation habits, less flights, not more.

1

Commenter P-282**Chang Dou**

To the esteemed committee overseeing the proposed airport expansion,

As a dedicated researcher in the biological and chemical fields at the Department of Energy's National Lab, I humbly implore you to conduct a thorough study into the potential impacts this expansion may have on the well-being and health of populations residing near the airport.

Foremost, I wish to bring attention to a critical concern regarding this project: the implications on Air Quality, the presence of Hazardous Pollutants, and the subsequent Health Effects on the local population.

Recently, the US Environmental Protection Agency (EPA) spearheaded an extensive investigation, reviewing a total of 3,301 scientific articles on the topic: "A systematic review of the impact of commercial aircraft activity on air quality near airports" (referenced: DOI Link). The revelations from this study were profoundly alarming. Evidence indicates that airports significantly amplify harmful pollutants in nearby regions. These pollutants encompass ultrafine particulate matter (UFP), particulate matter under 2.5 microns in diameter (PM2.5), black carbon, criteria pollutants, and polycyclic aromatic hydrocarbons. The study further revealed that residents in proximity to airports face heightened risks, including increased rates of premature death, pre-term births, diminished lung function, oxidative DNA damage, and even childhood leukemia.

Given these findings and understanding the gravity of the consequences, it becomes paramount for us to ensure that the welfare of our communities is safeguarded. As such, I earnestly request the committee to consider commissioning a comprehensive assessment,

focusing explicitly on the projected environmental and health repercussions stemming from the proposed airport expansion.

Together, let's make informed decisions that prioritize the health and well-being of our communities.

Thank you for your attention to this matter.

4

Response to Commenter P-282

1. **Chapter 3** of the EIR discusses potential impacts of the Proposed Project.
2. **Section 3.3** of the EIR discusses air quality. No significant air quality impacts would occur because of the implementation of the Proposed Project.
3. The commenter's statement regarding the potential impacts of the Proposed Project is noted. **Chapter 3** of the EIR discusses any potential impacts.
4. The commenter's statement regarding communities is noted.

Commenter P-283

Christine Downie

As an environmental scientist, mother, and Bay Farm resident I am very concerned about the proposed airport extension. It would result in additional air and noise pollution as well as generate additional greenhouse gases through the use of fossil fuels. Moreover, wildlife will be impacted by the additional flights out of OAK, and flagship species like Bald Eagle and Least Tern may choose to live in a quieter location - as does our family!

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.
--

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-287

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur because of the implementation of the Proposed Project.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-288**Serafina Eagleton**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-288

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Commenter P-295**Evan Elias**

In the face of our dire climate crisis we need to make some tough decisions about how we live on this planet. The air travel that has become so much a way of life for many, is part of what's killing our planet. We need to invest in less polluting forms of transportation. In light of the mandate to move away from fossil fuels we also need to reduce our reliance on air travel. We do not need an expanded airport in Oakland. An expanded Oakland airport will lead to more GHG emissions, which accelerates climate change. Air travel is a luxury form of travel which pollutes the world for everyone else, especially the frontline communities that live near the airports. These frontline communities will be exposed to more air pollution and more noise pollution which both impact public health. Our rising sea levels will also create problems for any development along the shoreline. I urge you not to invest money in a fossil fuel based climate destroying project. No to OAK Expansion.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-297**Erin Ellinwood**

To the Port of Oakland and the City of Alameda,
I'm writing to inform you about my significant concerns regarding the proposed Oakland Airport expansion and ask you to consider and act on several fronts.

1

Key Concerns:**Increased Noise and Air Pollution:**

Expanded flight operations, especially the North Field runway usage, would expose Bay Farm Island and Main Island residents and schools to escalated noise levels and jet fuel emissions. Existing South Field runway proximate neighborhoods already endure an average sound level exceeding the FAA-regulated 65dB.

2

Health and Environmental Risks:

Scientific studies, such as those conducted in residential areas of Boston, MA, underline serious health impacts from aircraft emissions, including premature death, decreased lung function, and childhood leukemia. Moreover, concerns linger regarding property value depreciation, wildlife impact, and boosted vehicular traffic.

3

Immediate Requests:**Comprehensive Local Studies:**

Implement technical, localized, and independently verified studies, incorporating noise and air quality sensors at ¼ mile intervals from all OAK airport runways. The analysis should encompass all gases and pollutant concentrations, reflecting on the potential impact on residents. This data is conspicuously absent from the current DEIR.

4

Exploration of Alternative Mitigations:

Please explore and implement alternatives to mitigate noise and pollution impacts, such as mandating all commercial jets to use specific runways and altering flight patterns.

5

Assertive Opposition from the City of Alameda:

I would like to urge the City of Alameda to take a definitive stance against the expansion, reflecting the strong disapproval of its citizens.

6

Extension of Deadline:

Extend the October 16 deadline to ensure thorough due diligence and appropriately address all noise and air pollution concerns, safeguarding against immediate and future health risks.

7

Your earnest attention to these pressing issues is anticipated and much appreciated.

8

Response to Commenter P-297

1. The commenter's statement regarding concerns of the Proposed Project is acknowledged.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-Airport worker locations, but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
4. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of implementation of the Proposed Project
5. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
8. The commenter's statement regarding concerns of the Proposed Project is acknowledged.

Commenter P-298**Erin Ellinwood**

To the Port of Oakland,

1

I am writing to express my strong opposition to the proposed expansion of the Oakland Airport. While I understand the potential economic benefits of such a project, I believe the negative impacts on our community far outweigh any potential gains.

One of my primary concerns is the increased noise and air pollution that would result from the expanded flight operations, particularly the usage of the North Field runway. This expansion would subject Bay Farm Island and Main Island residents and schools in the area to elevated noise levels and harmful jet fuel emissions. It is important to note that even the existing South Field runway already exposes nearby neighborhoods to noise levels exceeding the FAA-regulated 65dB, making further expansion unacceptable.

Moreover, scientific studies conducted in other areas have shown serious health impacts from aircraft emissions, including premature death, decreased lung function, and childhood leukemia. Additionally, concerns about property value depreciation, adverse effects on wildlife, and increased vehicular traffic further exacerbate the negative consequences of this expansion.

I implore you to consider these concerns seriously and prioritize the interests and health of our community members over any short-term economic gains that may come from the airport expansion. Thank you for your attention to this critical matter.

Response to Commenter P-298

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations. **Section 3.13** of the EIR provides an analysis of the traffic impacts that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. The commenter's statement regarding concerns related to the Proposed Project is noted.

Commenter P-299**Erin Ellinwood**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

3. Aviation is hard to decarbonize and biofuels are not the answer.

4. It's too much noise. More Flights= More noise.

5. Sea level rise threatens shoreline development.

6. Labor rights are at stake.

7. Inequity: flying is an elite privilege with high costs for everyone else.

8. We have alternatives. Invest in Rail.

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

Response to Commenter P-299

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-300
Luzanne Engh

I live on Bay Farm Island. Additional flights will greatly impact noise and pollution in our neighborhood.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-301**Paul English**

I'm an environmental epidemiologist. This means that I study the effects of the environment on human health. I worked for the California Department of Health for over 20 years and I wanted to thank the Port for being transparent in the EIR about the significant and as you say unavoidable impacts for greenhouse gas emissions.

1

I'm thinking about my daughter Fiona right now. She lives up in Eugene, Oregon. She could be your daughter, your son, and she's living right now next to these wildfires that have broken out near Eugene. She has an air quality index over 350 which means she has hazardous air quality that she is breathing. I just want you to think for a second about this might be your own son or daughter and realize that what we're deciding about today will impact your son or daughter for future generations.

2

We've had July as the hottest month ever recorded in the world. We've had West Maui devastated by wildfires with people having to run into the ocean to escape the effects. We had estimates of 61,000 people that died last year in Europe from heat waves and we know that this airport expansion will increase these greenhouse gas emissions and we will be causing more of these same problems. We are super charging these events with greenhouse gas emissions. We are super charging extreme weather events and we should stop this now. Thank you, very much.

Response to Commenter P-301

1. The commenter's statement regarding transparency on greenhouse gases is noted.
2. **Section 3.3** of the EIR discusses air quality. No significant air quality impacts would occur because of the implementation of the Proposed Project. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-302**Paul English**

Oakland airport conducted an Env Impact Report as required, but that does not explicitly address health impacts locally and globally. The airport should have been required to conduct a HIA (health impact assessment).

Matt Eremko

I am a long time resident of San Leandro living approximately 4.5 straight line miles from Oakland Airport. During the night I can hear planes idling and the thunder of engines as they take flight. The FAA oversees airline safety AND promotes expansion of the industry. NextGen brought aircraft over our homes. This expansion will make life in the east bay intolerable! Enough is Enough!! Stop the Oakland Airport expansion!!

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1

Commenter P-307**Reva Fabrikant**

We are beyond the tipping point for global warming temperature! That's very scary. Do any local politicians care about that? Expanding OAK will only make things worse for our homes and planet. Those in power are clearly willing to create more long term havoc for our planet in order to provide short term benefits to a minimal number of people. That's just plain WRONG!

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-309**Marion Falk**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-309

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-310**Wayel Fare**

Commenter P-313

Leora R Feeney

I am a neighbor and active in my community, subscribe to two news papers and watch the news on TV. How did I miss the release of the EIR for this project in July?

1

Please give us time to review this large project and impacts to the community and wildlife that has been edged out for decades. Mitigations don't seem to be working.

2

Response to Commenter P-313

1. The Port conducted extensive public engagement as identified in **Chapters 1 and 6** of the EIR. See also Global Response E: Environmental Justice and Community Engagement.

The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

2. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR

Commenter P-314**Francis Fernandes**

Until the FAA can address the current concerns we shouldn't help line the pockets of the companies involved in this.	1

Commenter P-316**Mary Flanagan**

I urge you to NOT expand the Oakland Airport.	1
---	---

In Oakland, some of the main factors associated with asthma are related to air quality. The California Health Interview Survey showed that 23.6% of children 5-17 years of age in	2
---	---

Alameda County had ever been diagnosed with asthma, a figure that is higher than the 18.0% that is found in California at large. Oakland residents can not expose our children to significantly more air pollution.

Historically redlined communities, predominately of people of color, would be most at risk from the increased flights, which would cause increased air pollution.

3

We have alternatives: investment in high speed rail, and remote business conferencing.

4

Another consideration is that the anticipated sea level rise due to Global warming rise would eventually put runways in the Oakland airport underwater.

5

In the face of the extremely threatening Global Warming Crisis, air travel will hopefully be de-incentivised, resulting in less demand for air flights.

6

I am particularly horrified that Leaded aviation gasoline (avgas) is still in use for piston-engine planes at the Oakland Airport. Leaded avgas was banned last year in Santa Clara County because of the harm to local residents, particularly children. Flight paths are unfairly concentrated over some neighborhoods instead of others. Flight patterns of planes that emit pollution from fuel that use as gas impact children in our most vulnerable communities. It is unacceptable that children of Oakland Are exposed to these emissions. The Center for Disease Control and Prevention states: "No safe blood lead level in children has been identified. Children are especially at risk from lead because of their small size and developing brains. Lead exposure can affect nearly every system in the body. Even low levels of lead in blood have been shown to negatively affect a child's intelligence, ability to pay attention, and academic achievement. Removing all sources of lead exposure is important before a child is harmed." <https://www.cdc.gov/nceh/lead/faqs/lead-faqs.htm> In short, the Oakland airport should not increase air traffic. We need fewer flights, not more.

Response to Commenter P-316

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged.
2. **Section 3.3** of the EIR discusses air quality impacts. No significant air quality impacts would occur as a result of implementation of the Proposed Project.
3. The commenter's statement regarding redlining is noted. For a discussion of environmental justice, see Global Response E: Environmental Justice and Community Engagement.
4. The Port does not have the authority to require air travelers to use other modes of transportation.
5. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
6. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

7. The commenter's statement regarding leaded fuel is noted. **Section 3.3** of the EIR discusses air quality impacts. No significant air quality impacts would occur as a result of the implementation of the Proposed Project.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-318**Jack Fleck**

I'm with "350 Bay Area" and we're part of the "Stop Oakland Airport Expansion Coalition," and I spoke last time. I'm a transportation engineer and I tried to make the case which I think is totally true that when you build something with a new supply you expand the induced demand for the capacity of the airport so this is in fact an expansion. Now if it were just a modernization which is the word that the EIR is using I think we'd have a lot more support but as -- it is really an expansion with all this additional gates and so forth. It fails to meet the screening criteria in the EIR in terms of the environmental effects.

So one thing that I did want to say that I haven't heard a lot of people talking about well okay what is a better alternative? Now the "no-build" doesn't take into account things that you mentioned today like consolidating ticketing, baggage, claim, seismic repairs. Why isn't there an alternative in the EIR that simply takes the existing two terminals and makes those kind of improvements? I think that would be a genuine modernization that you know we could probably live with because it wouldn't be doing all this encouraging of induced demand so that's my comment for today.

Response to Commenter P-318

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 4** of the EIR provides a discussion of alternatives to the Proposed Project, including a No Project Alternative, which is considered to be an alternative to the Proposed Project in conformance with Section 15126(d) of the CEQA Guidelines. The EIR evaluates alternatives to accommodate the increase in enplanements and aircraft operations that would occur with or without the implementation of the

Proposed Project. Each alternative is analyzed for the ability to meet most of the basic project objectives while avoiding or lessening significant environmental effects. Thus, the EIR identifies and analyzes the range of alternatives available to the Port. See also Global Response I: Alternatives.

Commenter P-319
Jack Lucero Lucero Fleck

Expanding the airport will only encourage more carbon intensive travel. Unless we have zero emission airplane, we should not be encouraging any expansion of aviation. We need to stop airport expansions for the same reason we need to stop freeway expansions--more capacity = more demand = more pollution

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

11

- We need to shift towards climate-just transportation.

Response to Commenter P-319

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions would occur whether or not the Proposed Project is implemented.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-320**Flora**

OAK,

I am both a frequenter of the airport but also live in the residential neighborhood. I am all for the modernization of the airport but NOT the expansion of the airport. Although some may say I knew what I was getting into when I bought into Alameda, I would agree--I bought into the neighborhood at the EXISTING use, not with a huge 60% expansion

1

underway or even planned at the time. If OAK can put all the commercial flights to fly eastward or westward--rather than directly over Bay Farm, then that would be fine. There's a lot of land to do that if you're trying to expand and while it would cost more to make that move, it would likely make for your Alameda neighbors to be more on board with this potential project. Also, please don't allow pilots to be able to choose to fly over Bay Farm (I read that they have a choice of which runways to use). They should always be choosing to take the least disruptive/farthest route away from Bay Farm.

2

Better yet, instead of expanding OAK, you should consider spending your money to build another !irport out past Dublin/Pleasanton where there is more land and would serve to lessen the strain on OAK---Then you would not need to expand at all, just modernize only. OAK is my airport of choice—It has its own charm, in that it's convenient to park, get in and out, and close by. However, the OAK charm is because it's the anti-SFO. SFO was built with a large airport in mind and has the necessary overpasses, roads, etc. to get huge amounts of people in and out. OAK does not have that. It sits at a dead end turnabout at the airport with traffic with tons of red lights in all directions to get in/out. (A large parking structure does not fix that basic issue).

4

Lastly, I have heard many talk about soundproofing windows. I disagree--with global warming an actual thing and warmer weather, most Alamedans still open their windows during the warmer months, many not being able to get AC because the units were not built for AC or AC ready. The best would to be to shift the runways so that they are pointing as far away from Alameda Bay Farm as possible--again reducing noise and pollution, which are the biggest concerns for everyone.

5

Thank you for taking the time to listen. I hope OAK will seriously consider trying to provide solutions to your patrons and your Alamedan neighbors.

6

Response to Commenter P-320

1. The commenter's statement regarding expansion is noted. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
2. The commenter's statement regarding flight paths is noted. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
3. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
4. The commenter's statement regarding alternative airport locations is noted. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of implementation of the Proposed Project.
6. The commenter's statement regarding concerns about the Proposed Project is acknowledged.

Commenter P-321**Consuelo Flores**

I share additional health concerns that can result from the noise that can not only disrupt sleep and lead to serious health issues but also can activate the stress response (autonomic nervous system) also causing or worsening physical and psychological conditions. The sudden loud and shocking sounds of an airplanes waking people from sound sleep or deep relaxation can disrupt and harm the nervous system in deleterious ways and over time potentially create unhealthy people and communities.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-321

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-322**David Foecke**

I'm here because i have a 9-year-old son.. I was walking home from school with my 9-year-old son this afternoon and we came by the house of an 80-plus-year-old woman whose tree branch had fallen in the last climate emergency atmospheric river.. We volunteered, my 9-year-old son and I to take her chainsaw and help her cut it up.. We met this 80-year-old woman during the lock down when no one was flying.. That's another story that maybe I'll continue at the next public hearing.

1

It's somewhat auspicious that this hearing is happening just days after the largest wildfire -- the largest fire consuming lives generated by climate change happened and then a day after youth won in State Court to force the consideration of climate change in public decisions.. We're living in a different reality people.. Any projection 20 years from now, market or non-market, think about 20 years ago.. In between there was a great recession and a pandemic

2

and you're going to pretend you can project passenger enplanements in 2038?· That makes a mockery of this process.

The thing that you need to do is to talk to the young people.· Youth Source Apocalypse is here, 350 Bay Area's here, Extinction Rebellion is here. They were not on the list of organizations you consulted.

3

Response to Commenter P-322

1. This comment is not associated with the EIR.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Also see Global Response A: Aviation Forecast.
3. The commenter's statement regarding agency consultation is noted.

Commenter P-323

David Foecke

The Draft EIR Fails in 2 important ways. 1) This public consultation process is woefully inadequate because it fails to collect input from at least 2 communities that would be negatively impacted by airport expansion A) The low-income communities of color in east Oakland most affected by fine particulate matter & other pollutants emitted by planes taking off and landing. B) Young people of the east bay, California, and the world whose very lives are at the greatest risk from global warming. This environmental review process must not go forward until public hearings are held, attended by those 2 communities. There are numerous east bay organizations that could help you organize such public hearings. 2) the projections of the number of enplanements that will happen by 2039

1

2

Response to Commenter P-323

1. The commenter's statement regarding public involvement is noted.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Also see Global Response A: Aviation Forecast.

Commenter P-324

David Foecke

It is hard to believe, when we are experiencing the hottest year on record, that anyone would take *any* action that would increase air travel.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

• We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
• Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
• Aviation is hard to decarbonize and biofuels are not the answer.	5

7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.

9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-325**David Foecke**

I'm here today because I have a 9-year-old son and I made a personal vow that on my death bed I will be able to tell him that I did everything in my power to leave him a livable world and that's one of the reasons why your EIR is woefully inadequate because it fails to take into consideration input of at least two directly impacted communities one of which is young people.. They are not here tonight.. They need to hear from -- you need to hear from them and I guarantee you that you will hear from them because if it takes them going to Court like it did in Montana, like they're doing in Hawaii, like they're doing with the federal government.. You will see them in Court so I suggest that you actually organize a public hearing where the organizations that represent young people, especially young people in East Oakland, can come and speak to you and don't limit their input to two minutes.

1

The second community that's missing here are the low income communities of color who are already impacted by air flight emissions.. And I want to address one widely speculative number in your EIR which is 24 million passengers.. It does not take into account a growing movement of people who like myself can respond to the earlier speaker have chosen to forego flying.. Those numbers are going to grow and will dwarf the 24 million because 15 years from now when the wildfires are a weekly daily event all around the world more and more people are going to be making that choice.

2

3

So I appeal to all of you who work for the Port of Oakland envision yourself on your death bed, what will you tell your child, your grandchildren, when they ask you, "what role did you play?.. Did you add fuel to the flames of global warming or did you do everything in your power to put out the flames?"

4

Response to Commenter P-325

1. The commenter's statement regarding public involvement is noted.
2. The commenter's statement regarding low-income communities is noted. For a discussion of environmental justice, see Global Response E: Environmental Justice and Community Engagement.

3. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Also see Global Response A: Aviation Forecast.
4. This comment's statement regarding climate change is noted.

Commenter P-326**David Foecke**

The Draft Environmental Impact Statement, in projecting future passenger traffic based on "market projections," fails to take into account the growing global movement of individuals, who formerly traveled a lot by plane, who are choosing to forgo air travel, in order to reduce their own carbon footprint.

1

Response to Commenter P-326

1. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.

Commenter P-327**David Foecke**

Section 15087(a)(2) of CEQA requires "Posting of notice by the public agency on and off the site in the area where the project is located." The posting of notice at the airport itself, and in the neighborhoods that would be directly affected by increased noise and air pollution, was inadequate, in violation of this section of CEQA.

1

Response to Commenter P-327

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of implementation of the Proposed Project. The commenter's statement concerning the public outreach is noted.

Commenter P-328**David Foecke**

The DEIR, in projecting future traffic based on "market projections," fails to take into account the growing world-wide movement, including in the East Bay, of individuals choosing to forgo air travel in favor of less environmentally destructive alternatives, in order to reduce their individual carbon footprints.

1

Response to Commenter P-328

1. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.

Commenter P-329**David Foecke**

Section 15087(a)(3) of CEQA requires "Direct mailing to the owners and occupants of property contiguous to the parcel or parcels on which the project is located. Owners of such property shall be identified as shown on the latest equalized assessment roll. The direct mailing by the Port to contiguous neighborhoods was woefully inadequate, both in Oakland, and in the properties in Alameda closest to the airport, in violation of CEQA." 1

Response to Commenter P-329

1. The commenter's statement regarding public notifications is noted.

Commenter P-330**David Foecke**

Section 15087(h) of the CA Environmental Quality Act states, "Public agencies should compile listings of other agencies, particularly local agencies, which have jurisdiction by law and/or special expertise with respect to various projects and project locations. Such listings should be a guide in determining which agencies should be consulted with regard to a particular project." Members of the Stop OAK Expansion Coalition have discovered, in meetings with Oakland City Council members, that the Port had never informed them directly about the publication of the DEIR and, in fact, most of them were completely unaware of the proposed project, until we informed them about it. This is a clear violation of CEQA, since the Oakland City Council will hold ultimate jurisdiction, by law, over the adoption or not of the proposed project. 1

Response to Commenter P-330

1. The commenter's statement regarding agency involvement is noted.

Commenter P-331**Marije Fokkens**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons: 1

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 2
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 3

For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-332**Marije Fokkens**

Because for the obvious reason that we, in the fight for climate change, can really not expand an airport but in fact have to look into decrease air travel and or make room for cleaner ways of transport. And on the short term conditions, we breathe enough polluted air as it is, with all the fires and freeways. Please make living conditions better, not worse.

Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-333**Nina Fok-Tang**

To the Attention of the Port of Oakland and City of Alameda,
 I share many concerns with my Bay Farm Island neighbors, who strongly oppose the
 proposed expansion of Oakland Airport. This project will greatly impact residents and
 schools in its vicinity. With an increase of departing flights and increased usage of the North
 Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would
 mean louder, more frequent noise disturbances and jet fuel released directly over Alameda
 residents and schools. Neighborhoods closest to the South Field runway already experience
 an average sound level greater than the FAA regulated 65dB from aircrafts departing from
 Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect
 impacts like decreased property values, environmental/wildlife concerns, and increased
 vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in
 residential areas, various studies indicate that impacts of aviation emissions remain under
 examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases,
 particles, and ultra particles in a residential area in Boston, MA, concentration of all gases
 and pollutants at the residential area greatly exceeded those measured at regulatory
 monitored sites. Another systematic review of the impact of commercial aircraft activity
 identified dangerous and adverse health impacts, including increased rates of premature
 death, preterm births, decreased lung function, oxidative DNA damage and childhood
 leukemia. These results show the pressing need to understand the direct impact of air
 pollutants from the Oakland Airport on Alameda residents. I am asking that the Port of
 Oakland and the City of Alameda conduct technical, localized studies that are independently
 verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments
 from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases
 and pollutants need to be measured and examined. This is entirely missing in the
 current DEIR and would allow for more accurate estimated noise and air pollution impacts
 on the residents most impacted by this expansion. I request that the Port of Oakland
 explores ALL other potential options to mitigate noise and air pollution impacts (require all
 commercial jets to use the North Field runway, change existing flight patterns, etc.). I also
 request the City of Alameda take a stronger stance in opposition to the expansion. The
 current response is disappointingly neutral and lacks the strong dissent of their citizens.
 Please extend the October 16 deadline until proper due diligence has been done and these
 air and noise pollution concerns have been addressed to mitigate immediate and long-term
 health risks.

Response to Commenter P-333

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
3. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-Airport worker locations, but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
5. **Sections 3.3 and 3.7** of the EIR summarize criteria pollutant and GHG emissions, respectively, associated with the Proposed Project. The air quality assessment was conducted in accordance with FAA guidelines for assessing environmental impacts and BAAQMD 2017 CEQA Guidelines. Consistent with those guidelines, the existing conditions included using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest, most representative of the general study area.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-334**Janet Follrath**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-335**Debbie Fong**

The airport noise is already much too loud as it is. The air quality is poor, our tile roofs are blackened and we must halt our conversations when planes fly overhead. Our health is compromised and the property value of our homes are diminishing.

1

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Response to Commenter P-335

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project.

The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

2. The commenter's statement regarding the health of the community it noted.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social

and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-336
Irene and Steven Fong

We oppose to the expansion. We have enough of airplane noises.

1

Response to Commenter P-336

1. The commenter's statement regarding opposition to the Proposed Project is acknowledged. The commenter's opposition to the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand, any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-337**Abbot Foote**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Commenter P-339**Scott J. Forman**

Greetings,

Since the form is apparently broken and I haven't received a reply to my message below, I am submitting this comment by email instead:

1

As a resident of Oakland and a strong supporter of sustainable transportation solutions, I also sometimes fly, including from OAK, and I'm fully in support of this project and I think it should be allowed to proceed apace.

2

Economic development is good for our region, and while climate change is an important civilizational challenge, artificially restricting developments like these to raise the price and inconvenience of air travel is not going to have any appreciable impact on our climate trajectory. Attempting to stop projects like this is a terrible waste of energy and political capital for those who care about climate, as I do deeply. If the opponents succeed at killing or delaying this project, their efforts will be at best completely irrelevant to the course of climate change.

3

I also believe that this entire process of environmental impact reports, reams of public comments, followed by years of inevitable lawsuits constitutes a stranglehold on our state and that the legal apparatus that requires this should be completely overhauled and radically streamlined. I'm commenting because that's the law for now, but this process is a wasteful and counterproductive form of democratic accountability.

4

Response to Commenter P-339

1. The commenter's statement regarding their inability to use the form is noted.
2. The commenter's support of the Proposed Project is noted.
3. The commenter's statement regarding climate change is noted. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. The commenter's statement regarding the environmental review process is noted.

Commenter P-340**Mary Diane Foster**

I've lived here since 1989, and it keeps getting worse! It is way off the charts right now. I can't believe the pollution, and what will be MUCH worse with this expansion.

1

Comment on the Draft Environmental Impact Report for the Oakland Airport Terminals Modernization and Development

1

Picking up where Jack Lucero Fleck, (350 Bay Area Transportation committee), ended his excellent comments:

"Therefore, until fossil free flight is possible, we need to support rail and alternatives to air travel, not promote (OAK) expansion."

To support rail, the Port of Oakland needs to fully fund a detailed, peer and community reviewed assessment using a rail traffic forecast model drafted by James Johnston, a member of the Stop OAK Expansion Coalition. (I contributed to an early version of this model.)

2

Please review James' work titled "Rail as an alternative to the Oakland International Airport expansion: California high speed rail will emit fewer greenhouse gas emissions than aviation, and most airport destinations are already reachable via today's Amtrak service," read it at <https://www.stopoakexpansion.org/trains-v-oak-departures-study>

The endgame is full public and private investment to bring existing high-speed, (e.g., California High Speed Rail Authority) and higher-speed, (e.g., Amtrak), rail passenger services up to automobile and airline competitive levels of service per guidelines detailed in the just released Sierra Club Rail Transportation Statement, read it at <https://www.sierraclub.org/sites/default/files/2023-08/Sierra%20Club%20Rail%20Report.pdf> (I contributed to an early draft of this report.)

3

The Port of Oakland Board needs to endorse the Sierra Club Rail Transportation Statement because the track infrastructure and "Open Access" service improvements detailed will leverage both passenger and freight volume and revenue to pay construction bonds, profit,

and generate significant public benefits net of public cost. The freight benefits will directly benefit Port of Oakland seaport operations.

High value, high volume freight operates on the same track infrastructure required to operate higher speed, (e.g., Amtrak), rail passenger services at automobile and airline competitive levels of service. For example, double and triple tracking the Coastline route between the San Francisco Bay Area and Los Angeles via Santa Barbara with top speeds meeting/exceeding the Northeast Corridor will accommodate innovative passenger and freight services to reduce highway and air market share.

Furthermore, speaking of induced demand and network effects, high-speed, (e.g., California High Speed Rail Authority), and higher-speed, (e.g., Amtrak), rail passenger services will take airline market share not only from OAK, but from SFO, SJO, and SAC, too, creating significant gate capacity, instead of expanding OAK, or any of them.

Recap:

1. Reject the new OAK terminal and gates proposed in the Terminal Modernization and Development plan
2. Fully fund the “Rail as an alternative to the Oakland International Airport expansion” model and factor freight into it
3. Endorse the Sierra Club Rail Transportation Statement, for its analysis of means and ends, up to and including its “Open Access” conclusion

Best Regards,
 Robinson Foster

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Subject: EIR- Concerns for Proposed Terminal and Increased Air Traffic

I am writing on behalf my family and other concerned residents of Point Richmond to express our strong opposition to the significant escalation of noise over our peaceful community which could result from the proposed new terminal and the associated increase in air traffic. We have observed a noticeable rise in the number of planes flying directly over our area in recent years, including during the night, disturbing our sleep, and any further increase in aircraft noise levels is unacceptable.

1

My family and I have lived in Point Richmond for over 20 years, and originally chose to make it our home because it represents an oasis of serenity within the bustling San Francisco Bay area. We treasure the scenic and tranquil Miller/Know regional parkland along our shoreline and hillsides, which is home to abundant wildlife and utilized and enjoyed by Point Richmond residents and citizens from surrounding communities alike. An increase in noise levels would disrupt the wildlife in the park and the quietude of recreational and residential areas and make our community a far less desirable place to live.

2

3

We are concerned that our community has not been adequately informed or involved in the Environmental Impact Report (EIR) and the plans for airport expansion, given our location is not immediately adjacent to the Oakland Airport. We believe that Point Richmond deserves special consideration regarding noise studies and mitigation, as outlined in FAA Order 1050.1F B-1.5.: "Special consideration needs to be given to the evaluation of the significance of noise impacts on noise sensitive areas within Section 4(f) properties (including, but not limited to, noise sensitive areas within national parks; national wildlife and waterfowl refuges; and historic sites, including traditional cultural properties) where the land use compatibility guidelines in 14 CFR part 150 are not relevant to the value, significance, and enjoyment of the area in question. For example, the DNL 65 dB threshold does not adequately address the impacts of noise on visitors to areas within a national park or national wildlife and waterfowl refuge where other noise is very low and a quiet setting is a generally recognized purpose and attribute. When the proposed action or alternative(s) would result in a significant noise increase and the proposed action or alternative is highly controversial on this basis, the EIS should include, as appropriate in light of the specific proposal under analysis, information on the human response to noise. Inclusion of data on background or ambient noise, as well as other noise in the area, may be helpful."

4

This order recognizes the importance of evaluating noise impacts on noise-sensitive areas, particularly in situations where the land use compatibility guidelines do not fully address the value, significance, and enjoyment of the area in question. Our community aligns with this criterion, as we, and visitors from surrounding communities, all cherish the peaceful neighborhoods and outdoor recreation areas that Point Richmond offers.

5

In light of the potential for significant noise increase and the controversial nature of the proposed action, we request that a Supplemental Noise Analysis be conducted, as permitted by FAA Order 1050.1F B-1.6. We understand that there is no one-size-fits-all methodology for such analyses, and we believe that a case-by-case approach is necessary to adequately characterize the specific noise impacts we face. This approach should consider not only metrics like DNL (Day-Night Average Sound Level) but also the magnitude, duration, and frequency of noise events that would result from the proposed changes.

6

We kindly urge you to prioritize our community's well-being and conduct a thorough assessment of the noise impacts that the proposed terminal and increased air traffic would impose on Point Richmond. Our residents have invested in this quiet haven, and we believe it is our right to preserve the peaceful and tranquil environment we cherish.

7

We also respectfully request that the flight routes be altered to farther north to allow planes to reach higher altitudes before they begin the eastbound portion of their flights. Another mitigation measure could be to alter flight paths so that planes don't repeatedly follow the same route overhead.

8

Thank you for your attention to our concerns, and we look forward to a comprehensive and transparent assessment of the potential noise impacts on our community.

9

Response to Commenter P-347

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project.
2. **Sections 3.4** of the EIR provides an analysis of the biological resource impacts that would occur as a result of implementation of the Proposed Project.
3. **Sections 3.4 and 3.11** of the EIR provide an analysis of the biological resource impacts and the noise impacts, respectively, that would occur as a result of implementation of the Proposed Project.
4. **Sections 3.4 and 3.11** of the EIR provide an analysis of the biological resource impacts and the noise impacts, respectively, that would occur as a result of implementation of the Proposed Project.
5. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project.
6. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project.
7. **Chapter 3** of the EIR discusses potential impacts of the Proposed Project.
8. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
9. The commenter's statement regarding noise impacts is noted.

Commenter P-348**Claire Frü**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-348

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-349**Xiya Fu**

Dear Members of the Alameda City Council,

I am writing to express my deep concerns regarding the proposed expansion of the Oakland Airport and its potential adverse effects on the quality of life for residents in our community. As a concerned citizen, I urge you to consider the following issues:

1. Increased Noise Disturbance:

- The proposed 50% expansion of the Oakland Airport is likely to lead to a significant increase in aircraft movements, resulting in elevated noise levels in our neighborhoods.
- Noise pollution can have serious health implications, including sleep disturbances, stress, and a decreased quality of life for residents living near the flight paths.

2. Deteriorating Air Quality:

- The expansion would also mean a substantial increase in air traffic, leading to higher emissions of jet fuel chemicals and pollutants.
- Residents already observe visible layers of black and grey particles on tree leaves, indicating potential air quality degradation.
- The long-term inhalation of these pollutants poses severe health hazards, especially for vulnerable populations.

3. Lack of Environmental Monitoring:

- The Port of Oakland's Draft Environmental Impact Report has not adequately addressed the concerns related to noise and air quality monitoring within Alameda.
- We urge the city council to ensure that proper technical monitoring is conducted before any expansion plans proceed.

4. Health and Safety Concerns:

- The health and safety of our community members, especially children and the elderly, are at risk due to the increased exposure to noise and air pollution.
- The expansion may result in higher rates of respiratory illnesses and other health issues, which could strain our healthcare system.

In light of these concerns, I respectfully request that the Alameda City Council take immediate action to address the potential negative impacts of the Oakland Airport expansion on our community. We urge you to consider alternative solutions that prioritize the well-being of Alameda residents.

6

We are asking that:

- The Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR. This will allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

7

- The Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.)

8

- The City of Alameda takes a stronger stance in opposition to the expansion. Their current response is disappointingly neutral and lacks the strong dissent of their citizens.

9

Response to Commenter P-349

1. The commenter's statement regarding quality of life concerns is noted.
2. **Section 3.11** of the EIR discusses noise impacts. No significant noise impact would occur as a result of implementation of the Proposed Project.
3. **Section 3.3** of the EIR discusses air quality impacts. No significant air quality impact would occur as a result of implementation of the Proposed Project.
4. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of implementation of the Proposed Project.
5. The commenter's statements regarding the health of the community and associated costs are noted.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of implementation of the Proposed Project.
8. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.
9. The commenter's statement regarding the City of Alameda is acknowledged.

Commenter P-350**Maryann Furda**

As a doctor, I have a special concern for human health. The air quality for residents near the airport is already dangerous for children and elders. More traffic will only worsen this. Our climate is changing much faster than was anticipated. We need alternatives, such as rail, not more planes in the air.

1

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-355
Agustin Garcia

Dear Leadership of the Port of Oakland,

I and many of my neighbors appreciate what the port does for our town and economy. We get it, thank you very very much. 1

But the future of the Airport is intertwined with the City of Alameda. This town is already under pressure from the State and Fed to increase housing units in this city. That means traffic and a lot of it based on the numbers of new homes the City is talking about. In that scenario the only thing I have asked of this City and the Board is to get adamant and stand firm on getting the Island a bridge and/or a tunnel or two. This is keyget it first, before we build thousands of houses.... before we make a huge expansion on the airport. If the Port and the city get together and get these projects on the map the state will have to listen to this combined approach.

Building bridges means a couple things means we all can move into the future together and not as adversaries and unhappy citizens. I wish everyone the best in this very important moment in Alameda's History. 2

Best
 Agustin Garcia (just a guy, who lives in Costa Brava)

Response to Commenter P-355

1. The commenter's statement regarding appreciation is noted.
2. The commenter's statement regarding access to the city of Alameda is noted.

Commenter P-356**Agustin Garcia**

I expect more infrastructure to be build before we go and build more houses or bigger airports. Build a bridge and tunnel for The island the after you will have my support for expansion... not before

1

8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-357**John Gardner**

Have been an Alameda resident for 35 years and once again the Port of Oakland proposes a dramatic expansion of their airport. Greed and ignorance can be the only motives. Air travel is a major contributor to climate change, air pollution and noise pollution and needs to be contained and rationalized, not expanded. Do this hurts our planet, but also punishes thousands of homeowners in the local area as they suffer devaluation in their property values and reduced quality of life. I will never be able to take living here if this continues. Too stressful and noisy and smelly from the planes crop dusting our neighborhood with pollution . Please come to your senses and stop thinking about making more money as your only goal.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

5
6
7
8
9
10

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.

6. Labor rights are at stake.	11
7. Inequity: flying is an elite privilege with high costs for everyone else.	12
8. We have alternatives. Invest in Rail.	13
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	14

Response to Commenter P-357

1. The commenter's statement regarding motivation for the Proposed Project is noted.
2. The commenter's statement expressing concerns about climate change, air quality, and noise pollution are noted.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. The commenter's statement regarding financial motivations is noted.
5. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
8. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
9. For a discussion of aircraft noise, see Global Response D: Noise.

10. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
11. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
12. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
13. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
14. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-358**Sanjay Garla**

I am worried about my son's health and the air in my neighborhood.

Commenter P-359

Chris Garrity

I think this is a project that needs to happen to keep OAK usable and competitive into the

1

future. That said, my home is in the flight path of North Field runway 22L. Currently the noise is tolerable w/ occasional bigger planes. I am worried about an increase in usage of the North Field.

2

In addition, I am also worried about sea level rise affecting the Port of Oakland and Alameda. We are in this together as neighbors and I hope we can work together to come to an agreeable solution. Thank you.

3

4

Response to Commenter P-359

1. The commenter's support of the Proposed Project is noted.
2. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
3. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
4. The commenter's statement regarding collaboration is noted.

Commenter P-360

Linda Garvin

We have filth over our deck?s from planes & hard to rest with noise, as well as bring in a climate emergency situation!!?

Commenter P-361**David Gassman**

I just want to be sure.. I live in Oakland, that the Port, the Board, the process consider the inevitable changes that are going to have to happen if we are going to continue flying in this country in this world.

1

I mean, you were talking about sustainable aviation fuel.. That's not really substantially different from fossil-based fuel. Airline -- airplane travel is an environmentally destructive process.

2

I argue that we have to rethink it very, very carefully as opposed to expanding our capacity to travel on fossil fuel or even sustainable aviation fuel planes.. We really need to rethink that carefully.

And if this modernization and development project does not do that, and I have seen no indication that it does, it is a mistake. And I -- I think I've made my point, maybe not as eloquently as I'd like to, but I would hope you'd get the message.. Thank you very much.

I happen to be on the steering committee of the "Stop OAK Coalition" and I wanted to say that I don't see the Board as enemies.· I want to be clear about that..· I do in a way see them as opponents and I'm trying to be part of a dialogue to make for a happier relationship.

1

My concern is well I don't want to see or let me put it differently.. I wish prosperity on the City of Oakland, on the Port of Oakland, and on the airport.· I personally whenever obviously the coalition may think am not interested in seeing the airport shut down or dismantled but it's clear to me that the plan is what you're calling the "modernization plan" is really an extension, a bigger and better version of what we currently have and that is untenable for all the reasons that you heard people give before.. We have to have a different kind of air transportation.. We can't keep going on with burning carbon-based fuels and even so-called sustainable aviation fuel is really a carbon-based fuel that does the same thing as a fossil fuel so that's what I'm personally trying to get across. Thank you, very much.

2

1. The commenter's statement regarding collaboration is noted.
2. The commenter's statement regarding future methods of air travel and future fuels for air travel is noted.

Commenter P-364**David F. Gassman**

Ladies & Gentlemen,

I am concerned that the Draft Environmental Impact Report (DEIR) does not give adequate consideration to the many negative effects of air traffic upon the health & well-being of residents near the airport (due to the emission of particulate matter from the burning of aircraft fuel), upon persons in the flight path of the planes due to noise, & to the overall consequences to everyone on earth in terms of the climate chaos caused by increased greenhouse gases. Expanding the airport will only increase & aggravate these problems.

1

Clearly, we have to reconsider our current form of air travel which relies upon the burning of a polluting fuel. Our present form of air travel actually needs to be reduced as opposed to be expanded, if it is ever to be sustainable.

2

For air travel to continue far into the future I believe that it will have to take a dramatically different form than it does today. It is not clear to me that the Port & the DEIR have given this serious consideration. That strikes me as most unwise & I submit these comments to encourage that consideration. It is reasonably clear to me that the proposed plan is simply contemplating more of the same, which will be contributing to disaster for everyone.

3

I have no problem with remodeling the existing terminals & modernizing the airport to make it function more efficiently. But I want to be certain that every consideration is being given to the changes that will be required in air travel for the future. Because I do not think that is

4

happening now I oppose the project until such a time as it is happening. I will appreciate seeing what this comment elicits in the way of response to these thoughts.

Response to Commenter P-364

Response to Commenter P-369

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-370**Berta Gelber**

The noise is already unbearable especially in the summer if you happen to open your windows. It wasn't like this when I moved in 1991. When they added more terminals the noise at certain hours of the day is deafening. No way to watch TV without putting on the pause button, then a few minutes later doing that again. Or having a conversation outside. I

1

haven't complained about daytime noise, but at night, that's a whole different animal. FedEx flying overhead, waking me up in the wee hours of the morning, multiple times. It's draining.

If you're retired like myself, you're usually going to be home more, and affected more as well.

Not to mention the air pollution...hello climate change? Don't we have a right to quiet enjoyment of our homes? It's all about the bottom line, money. So, what else is new?

2

Response to Commenter P-370

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement regarding economic motivations is noted.

Commenter P-371

Berta Gelber

I'm a resident of Bay Farm Island.. I live two blocks down from the harbor or one block from the harbor base ferry and I bought in 1991 when it was the Oakland Municipal Airport and there was the expansion -- there was an expansion in 2006 with five gates and I did notice an uptick in the noise and since I retired in 2012 it's almost unbearable, can't open a window we have dual pane windows and even with it closed the noise is unbearable at certain times of the day and in the evening, midnight, they're still flying the planes overhead.. During the summertime got to keep the windows closed because the noise is just unbearable and if this expansion goes through it just won't be unbearable it will be unlivable and that's my personal experience.

to occur whether the Proposed Project is implemented or not, any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-372

Berta Gelber

I have lived in Bay Colony right up the street from the Harbor Bay Ferry since 1991, when OAK was called Oakland Municipal Airport. At that time noise wasn't an issue. I worked, busy on weekends and life went on. Then they added a 2nd Southwest Terminal and noise started to become a factor. You couldn't hold a conversation outside without the "pause". I recall smelling the "ah, airline fuel in the mornings" as I left for work.

Now, that I've retired to enjoy the fruits of my labor, it's truly been challenging. You cannot keep a window open at night. The planes roar overhead, being out of compliance on many occasions. Try watching TV at any hour of the day or night. Impossible, especially if there's a dual pane window open. The "pause" continuously.

FedEx is a big noise contributor flying overhead at all hours in the middle of the night, with their lumbering older planes. I try to write down the times being awoken by FedEx and then if on cue, commercial flights take over at 6:00 am. Whatever happened to silent 7/11?

Answer: It never happened. I just couldn't imagine operating 16 more gates. This area will become uninhabitable as it is already unbearable. The noise and pollution will destroy our property values and our health. Aren't we entitled to the quiet enjoyment of our homes?

Answer: NO.

1

I feel the Port is all about money, and that's the bottom line.

2

Response to Commenter P-372

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project.
2. The commenter's statement regarding economic motivations is noted.

Commenter P-373

Berta Gelber

My second comment, and personal feeling about what may happen. I'M TERRIFIED. This is how I, and others feel about this airport expansion. That was stated at the City Council meeting on Oct. 2nd. I never imagined that I would feel this way about where I live. In 1991 when I bought, it was called "Oakland Municipal Airport". Who could have dreamed that it would come to this. Already it's horrible, with the jet/plane noise day and night. Dual paned windows are useless. You can't keep a window open at night. When commercial flights cease around midnight, then FedEx takes over with their planes lumbering over the neighborhoods. For folks that sleep well it may not be an issue. For those of us who don't, it is. Even if you sleep well, during the day you just can't watch TV without the "pause"...or try having an outside conversation...impossible.

1

What's going to happen with 16 more gates and triple the amount of flights? Not just the noise, but the pollution and traffic. It will destroy and decimate this area. I thought this

2

would be my last home, retired and happy. No. Now, I'm thinking of moving....where? I just don't know. Interest rates are through the roof and homes cost (in a decent area) 900K or more. What will this do to our property values? Who wants to live next to an airport this large? It would be like fracking in someone's backyard. We are all for remodeling this airport, but tripling the amount of air planes, that's a recipe for our disaster.

3

Response to Commenter P-373

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of the implementation of the Proposed Project.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of implementation of the Proposed Project. **Section 3.13** of the EIR provides an analysis of the traffic impacts that would occur as a result of implementation of the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. The commenter's statement regarding cost of living is noted.

Commenter P-374

Berta Gelber

Been on Bay Farm, right up the street from the Harbor Bay Ferry since 1991 when it was called OAKLAND MUNICIPAL AIRPORT. No issues until they added the second Southwest terminal. You can't keep a window open at night because the noise is unbearable and I have dual paned windows. I call it the ?pause ? when trying to watch TV or have a conversation outside These planes fly over neighborhoods one after the other. It's something you can never get used to. As well as the pollution that descends on us. Black soot around windows, awful fuel smell and the increased traffic will be something that we will have thrust upon us With this proposed expansion this community will be decimated and unlivable.

1

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

3

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

5

3. Aviation is hard to decarbonize and biofuels are not the answer.	6
4. It's too much noise. More Flights= More noise.	7
5. Sea level rise threatens shoreline development.	8
6. Labor rights are at stake.	9
7. Inequity: flying is an elite privilege with high costs for everyone else.	10
8. We have alternatives. Invest in Rail.	11
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	12

Commenter P-375

Jessica Getty

As a resident of Bay Farm, the expansion will have a significant impact on my community. We will be subject to years of noise and air pollution from continuous construction, including many demolition projects. These communities are already in non-attainment for various air pollutants, which this Project will make worse.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

| 1. Noise – Although there is supposed to be an evening quiet period planes still fly over and wake us up. Is there any policing of private plane.

(I live in Garden Isle) | 1 |
| 2. Will the airport authority replace windows, as they once did, so neighbors can have noise reduction. | 2 |

Response to Commenter P-380

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of the implementation of the Proposed Project.
2. The noise analysis in the EIR describes the changes in noise associated with the increase in aircraft operations that would occur with or without the implementation of the Proposed Project. The Port established the Oakland Airport-Community Noise Management Forum in 1998 (Noise Forum), to provide a committee comprised of elected officials and citizen representatives to address aircraft noise issues related to OAK. With a 20+ year history, this forum is now an important standing venue for communication between the Airport and at least six neighboring communities and the county. With input from the Noise Forum, the noise management program has continuously improved with implementation of noise minimization measures, data capture, documentation, and communication tools. These measures and tools include voluntary "fly quiet" procedures for pilots, a noise monitoring system, a noise complaint reporting system, web-based aircraft report dashboards, community advisories, and continued advocacy on behalf of the community regarding FAA management of flight paths.

Commenter P-381**Bella Goldwasser**

I'm a member of "Youth Power Climate Action."· I'm 17 years old and a senior at Alameda High School..· Fighting climate change is one of the most important parts of my life. I want to live in and pass on a world that is safe, just, and beautiful, and right now you have a powerful opportunity to contribute to that goal..· By not expanding the Oakland airport you can lead our transition into a world with fewer carbon emissions.

Now is not the time to encourage more airplanes to fly..· As climate change becomes a larger and larger part of our lives consumers particularly my generation and myself will want to fly in airplanes less, not more..· On the rare occasions that I do have to fly I would rather it be with an airport I know is fighting for climate justice just as much as I am..· Don't add new gates to the Oakland airport. It is unnecessary and reinforces the idea that we have no power to slow global warming..· Right now you have incredible power to support a consumer change to the benefit of the climate..· Thank you.

- 2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- 3. Aviation is hard to decarbonize and biofuels are not the answer.
- 4. It's too much noise. More Flights= More noise.
- 5. Sea level rise threatens shoreline development.
- 6. Labor rights are at stake.
- 7. Inequity: flying is an elite privilege with high costs for everyone else.
- 8. We have alternatives. Invest in Rail.
- 9. We have alternatives like remote business and conferencing.
- 10. We need to shift towards climate-just transportation.

Response to Commenter P-382

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-383**Nio Gonzalez**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	2
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	3
3. Aviation is hard to decarbonize and biofuels are not the answer.	4
4. It's too much noise. More Flights= More noise.	5
5. Sea level rise threatens shoreline development.	6
6. Labor rights are at stake.	7
7. Inequity: flying is an elite privilege with high costs for everyone else.	8
8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Commenter P-386

Michelle Gossage

We will be impacted by poor air quality and noise , increased street traffic. I am trying to be fair and understand that I bought a house near an airport. However, when I bought the house over 15 years ago, the airport was reasonable in size and air traffic. I find it a bit unfair that they're expanding to the point that it's become unpleasant with the huge increase in the airports size and sheer numbers of additional planes in the sky causing noise and changing what was once a relatively peaceful neighborhood into one with a constant humming in joining of airplanes from above. If any expansion is allowed, it should be a mandate that only planes with quiet engines can use the Oakland airport. The FedEx planes need to takeoff at routes that are far away from homes.	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	3
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	5
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	6
3. Aviation is hard to decarbonize and biofuels are not the answer.	7

Response to Commenter P-386

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of

implementation of the Proposed Project. **Section 3.13** of the EIR provides an analysis of the traffic impacts that would occur as a result of implementation of the Proposed Project.

2. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. The commenter's statement regarding quieter engines is noted.
4. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. Corrina Gould

I live in Sobrante neighborhood where we are impacted by railroads, the freeway and the airport. Expanding the airport to allow more flights would continue to impact the health of poor, working class BIPOC people. The Oakland Airport is already in a flood zone for sea level rise and we need to focus on preventing our bay water from rising and impacting our fresh water, homes and further pollution of the Bay. Air Traffic also impacts the noise levels in our neighborhood, more vehicle traffic in disadvantaged neighborhoods like Sobrante and with no mitigations for us. Expanding the Oakland Airport will impact, humans, the Bay, fish and other water life, birds and other animals as well as plant life, and will further create more global warming. We need solutions to climate disaster not more planes in the air causing the temperature of our world to rise. I OPPOSE OAK expansion.

Commenter P-389**Ariella Granett**

I am part of the Stop OAK Airport Expansion Coalition. Thank you so much for hearing all of our comments tonight. I would also like to propose that our coalition could have a meeting with you and the Port of Oakland Board of Commissioners to continue this dialogue. I think it's been wonderful to hear all these comments and this deserves a discussion and we would like to open that line of communication with you.

1

I have to say I'm a little embarrassed that I forgot to bring a very important thing here tonight. I had a packet of 271 letters that we have gathered in opposition to the airport expansion and so I'll have to come back on the 30th to hand deliver those letters to you and

2

we may have more by then. Again, thank you for hearing our concerns tonight. I want to say that I listened to your summary of the project and in the project objectives and screening criteria there was something missing. I did not see mention of community health and a livable climate.· The plan sounds outdated to me.· It is 2023 and the world is on fire and our communities are dying of air pollution so in my view there's no such thing as a modern airport expansion.· I'd like to add that in the Draft Environmental Impact Report air pollution and global warming emissions are summarized as significant and unavoidable.· I have an idea of how they can be avoided.· We call on you and the Port of Oakland to cap and reduce flights, not increase them, and that is how these problems can be avoided.

3

In my day job I'm an architect.· I'm also a LEED accredited professional.· That means that I specialize in designing buildings that are net zero and low carbon.· Let me tell you, you mentioned sustainable designs but in this context it is completely insignificant to design a building's sustainability.

4

5

Response to Commenter P-389

1. The commenter's statement regarding collaboration is noted.
2. The commenter's statement regarding providing comments from the community is noted.
3. The commenter's statement regarding the health of the community is noted.
Section 3.3 of the EIR discusses air quality impacts. No significant air quality impacts would occur as a result of implementation of the Proposed Project.
4. The commenter's statement regarding limiting the amount of flights at the Airport is noted.
5. The commenter's statement regarding building design is noted.

Commenter P-390

Ariella Granett

I'm worried about my kid's future because of climate change. Four years ago, my family declared a climate emergency and we are doing everything we can to lower our emissions including that we quit flying because we realized that flying was a HUGE part of our carbon footprint. OAK should also declare a climate emergency and reduce it's greatest source of air pollution and emissions which are from the FLIGHTS themselves! It is greenwashing to claim that an airport expansion could ever be sustainable because reducing airport building and ground operation emissions is so insignificant compared to the pollution and emissions from flights. In fact, at SFO, a modernized airport, 99% of SFO's emissions are from flights! If OAK paves the way for 24.7 Million passengers per year, that is like adding 885,000 gas guzzling cars to the road! This has been a year of extreme heat, fires, flooding, hurricanes, 100 degree ocean water, and it's going to be getting a lot worse with accelerating climate change. We gotta stop burning stuff - including oil, gas, jet fuel and biofuels! And, I implore you to act for environmental justice. Stop redlining in the sky- people are getting sick and don't live as long in the zip codes under flight paths. Ban leaded AvGas. Stop all airport advertising, CAP FLIGHTS and encourage low carbon travel like train, bus or carpooling.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.

8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Response to Commenter P-391

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-392**Caryn Graves**

Commenter P-394**Eric Greenwood**

I am writing on behalf my family and other concerned residents of Point Richmond to express our strong opposition to the proposed new terminal and the associated increase in air traffic, which would result in a significant escalation of noise over our peaceful community. We have observed a noticeable rise in the number of planes flying directly over our area in recent years, and any further increase in aircraft noise levels is unacceptable.

Point Richmond has earned a reputation for being a tranquil and quiet community for several reasons, including:

1. Natural Buffer: The hills and the presence of the San Francisco Bay act as an excellent natural buffer against road and city noise. The western side of Point Richmond, facing the Bay, is exceptionally quiet due to the surrounding hills to the north and the Bay to the south and west.
2. Natural Parks: Keller Beach, Miller/Knox Regional Park, and Brickyard Cove are our local treasures, offering peace and tranquility to our residents and visitors from surrounding communities.

Our hilly terrain places us in closer proximity to aircraft flight paths, intensifying the impact of aircraft noise on our community. Many of us have chosen to make Point Richmond our home for years because it represents an oasis of serenity within the bustling San Francisco Bay area. Therefore, we are sensitive to any potential increase in noise levels that could disrupt the quietude of our community.

We are also concerned that our community has not been adequately informed or involved in the Environmental Impact Report (EIR) and the plans for airport expansion, given our location not immediately adjacent to the Oakland Airport. We believe that Point Richmond deserves special consideration regarding noise studies and mitigation, as outlined in FAA Order 1050.1F B-1.5.

"Special consideration needs to be given to the evaluation of the significance of noise impacts on noise sensitive areas within Section 4(f) properties (including, but not limited to, noise sensitive areas within national parks; national wildlife and waterfowl refuges; and historic sites, including traditional cultural properties) where the land use compatibility guidelines in 14 CFR part 150 are not relevant to the value, significance, and enjoyment of the area in question. For example, the DNL 65 dB threshold does not adequately address the impacts of noise on visitors to areas within a national park or national wildlife and waterfowl refuge where other noise is very low and a quiet setting is a generally recognized purpose and attribute. When the proposed action or alternative(s) would result in a significant noise increase and the proposed action or alternative is highly controversial on this basis, the EIS should include, as appropriate in light of the specific proposal under analysis, information on the human response to noise."

Inclusion of data on background or ambient noise, as well as other noise in the area, may be helpful."

This order recognizes the importance of evaluating noise impacts on noise-sensitive areas, particularly in situations where the land use compatibility guidelines do not fully address the

1

2

3

4

value, significance, and enjoyment of the area in question. Our community aligns with this criterion, as we cherish the quiet setting that Point Richmond offers.

In light of the potential for significant noise increase and the controversial nature of the proposed action, we request that a Supplemental Noise Analysis be conducted, as permitted by FAA Order 1050.1F B- 1.6. We understand that there is no one-size-fits-all methodology for such analyses, and we believe that a case-by-case approach is necessary to adequately characterize the specific noise impacts we face. This approach should consider not only metrics like DNL (Day-Night Average Sound Level) but also the magnitude, duration, and frequency of noise events that would result from the proposed changes.

5

We kindly urge you to prioritize our community's well-being and conduct a thorough assessment of the noise impacts that the proposed terminal and increased air traffic would impose on Point Richmond. Our residents have invested in this quiet haven, and we believe it is our right to preserve the peaceful and tranquil environment we cherish.

6

We also respectfully request that the flight routes be altered to farther north to allow planes to reach higher altitudes before they begin the eastbound portion of their flights.

7

Another mitigation measure could be to alter the flight paths such that plane after plane don't take the same route.

8

Thank you for your attention to our concerns, and we look forward to a comprehensive and transparent assessment of the potential noise impacts on our community.

9

Response to Commenter P-394

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of implementation of the Proposed Project.

Commenter P-396**Lin Griffith**

Of course the airport must be maintained and maintaining it in a way that is more modern is appropriate but I am concerned about the financial wisdom of this expansion of 16 gates.

1

One reason given in the DEIR for the need to expand flight capacity is the projected increase in population to the Bay Area.. The expansion plan has been in the works for a number of years and before the pandemic it did appear that the Bay Area population would continue increasing indefinitely but that is no longer the case.. Many people are leaving so the actual increase we are seeing is very slight. The Port needs to adjust the plan to suit the new reality.

2

Another reason given for expanding flight capacity is an increase in market demand over which the Port claims to have no control.. I hear radio ads every day designed to bring travelers to Oakland's airport rather than to any other.. That is not the sign of an inevitable market demand increase and it's not the sign of an increase that the Port has no control over.. Clearly it is constantly working to grow market demand.. Then building a terminal with 16 new gates is sure to induce demand far beyond what demand growth might naturally occur.. Right there is surely an effort to bring the market to this particular airport.. Even if market demand does grow some, surrounding airports in San Francisco, San Jose, Sacramento, and Santa Rosa will also take up portions of that demand and the DEIR does not account for that.. And finally as was just mentioned many people will choose not to fly for good reason.

3

4

The Port of Oakland would do well to study more carefully the need they see for increasing flight capacity.. Historically –

5

2. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements. Also see Global Response A: Aviation Forecast.
3. The commenter's statement regarding advertising by the Airport is noted.
4. The commenter's statement regarding methods of travel is noted.
5. The commenter's statement regarding increasing capacity is noted. Also see Global Response A: Aviation Forecast.

Commenter P-397

Lin Griffith

I am asking the airport to avoid the significant and you claim unavoidable impacts that you have mentioned several times in the DEIR. The very significant addition of greenhouse gasses to the 11 percent of Bay Area climate emissions already caused by aviation is very important to me.. I care deeply about the world we are damaging and leaving for our kids.. The ultrafine particle air pollution increases of additional gates and lights will bring longterm debilitating health consequences to persons in a 10-mile radius of the airport and most especially to airport workers and those living under flight paths near the airport.. I live in East Oakland so I also care deeply about my health and that of my daughter, neighbors, friend, and everybody else in East Oakland, East Bay.. These impacts are avoidable.

1

It is true that our government cannot come together to govern wisely.. Biden ordered all Federal agencies to consider climate change but the Federal Aviation Administration didn't get that memo.. It still doles out money for airport expansion.. Since they are not exercising appropriate authority I call upon you to show more wisdom than they have the backbone to exhibit.. Please eliminate expansion from your modernization plans, no excuses.. Thank you.

2

Response to Commenter P-397

1. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.
2. The commenter's statement regarding government policy is noted.

Commenter P-398

Lin Griffith

The unexamined life is not worth living and the unexamined public agency floats along doing what others have always done without an examined guiding principle.. Business as usual based on an assumption of growth is what has gotten into, gotten us into the climate crisis that we are only now opening our eyes and seeing all around us, what's causing the heat,

1

droughts, wildfires, floods that are worsening at an alarming rate. it's not something or someone else.. It's us, we who go right on designing bigger and more resource rich systems including airports that make life easier for the affluent few who fly.

Our national and state governments are finally regulating and creating incentives to reduce greenhouse gas emissions from road transportations and other areas but have stepped aside from regulating aviation emissions.. To both raise and propel aircraft requires a much more challenging amount of energy and no solution can be readied in the limited time available but fortunately individual customers are noticing the increase in disasters and making the connection to our behavior and flying less.. It is time for the Port of Oakland to make that connection too.

Who has the courage to be the first to say enough growth, enough increasing extraction of resources to allow the affluent to live well?.. Who has the courage to stop overusing our share of resources and allowing other countries and the next generations their turn?.. I call upon the Port of Oakland to make a much better name for itself by becoming a leader of conscience.. What California starts, other states follow.. It's time to turn around the self-indulgence era by starting to live within planetary boundaries and ensuring equity.

Modeled and responsible behavior that will –

4. The commenter's statement regarding monitoring and behaviors is noted.

Commenter P-399

Lin Griffith

Expanding the airport is business as usual. Continuing business as usual is bringing climate breakdown upon us. While affluent individuals continue to fly and airports expand to facilitate their flights, the majority bear the brunt of the climate and pollution effects. We are running as fast as we can toward climate catastrophe--out of habit? greed? Let's step back, consider long-term effects and equity. We don't need a bigger airport. We need to rethink transportation instead--avoid some travel, divert some to rail. And the Port needs to understand such a change and plan for a livable future.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

• Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	5
• Aviation is hard to decarbonize and biofuels are not the answer.	6
• It's too much noise. More Flights= More noise.	7
• Sea level rise threatens shoreline development.	8
• Labor rights are at stake.	9
• Inequity: flying is an elite privilege with high costs for everyone else.	10
• We have alternatives. Invest in Rail.	11
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	12

Response to Commenter P-399

1. The commenter's statement regarding climate change is noted. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. The Port does not have the authority to require air travelers to use other modes of transportation.
2. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

7. For a discussion of aircraft noise, see Global Response D: Noise.

8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-400**Lin Griffith**

In 3.7-4, the DEIR states that "the majority of the Proposed Project's GHG emission increases would result from market-based demand and related aircraft emissions and the Port does not have the authority to mitigate air pollutant emissions associated with aircraft operations. Therefore, the impact would be significant and unavoidable." 1

By declaring that it does not have the authority to reduce aircraft emissions, the Port strives to absolve itself of all responsibility for the vast majority of GHG emissions it facilitates. However, the absence of a document that spells out and bans providing a place and assistance for planes' landing and taking off does not prevent the Port from commanding the moral authority of doing what is right for the good of both the people and the planet. 2

There is no requirement in law for OAK to grow its capacity for servicing more flights; the plan to do so by adding gates is prompted by the business-as-usual assumption that the future offers growth, and with that mindset it is tempting to overestimate the automatic growth in market demand mentioned repeatedly throughout the DEIR but, as in the Vision 2000 overestimation of market demand, not adequately documented. By all means modernize as part of maintenance. But adding gates will, as others have shown, induce additional flights. OAK's constant advertising is intended to grow flight capacity too. This focus on growth harms health and the environment. 3

To take the high road, to exert leadership where all levels of government are ignoring aviation as a means of lowering GHG emissions to reach climate targets, OAK does not need permission. It does not need to perform some proscribed action to fix things. It only needs to NOT perform the action it has announced, ie. expanding flight capacity by adding 16

gates and ultimately a commensurate number of flights. It does not need authority granted by some other agency for that.

STOP thus causing climate disruption, for that is what this project would cause.

4

Response to Commenter P-400

1. **Section 3.3** of the EIR discusses air quality impacts. No significant air quality impacts would occur as a result of implementation of the Proposed Project. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.
2. The commenter's statement regarding the Port's authority is noted.
3. The commenter's stated regarding capacity is noted. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. - Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-402

1. The commenter's statement regarding rethinking air travel, pollution, and climate impacts are acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-403
Debbie Gunning

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- | | |
|---|--|
| 1 | 21. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming |
| 2 | 22. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution |
| 3 | 23. Aviation is hard to decarbonize and biofuels are not the answer. |
| 4 | 24. It's too much noise. More Flights= More noise. |
| 5 | |

25. Sea level rise threatens shoreline development.	6
26. Labor rights are at stake.	7
27. Inequity: flying is an elite privilege with high costs for everyone else.	8
28. We have alternatives. Invest in Rail.	9
29. We have alternatives like remote business and conferencing.	
30. We need to shift towards climate-just transportation.	10

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-404

Gustavo Gutierrez

I'm a staff member for Communities for a Better Planet.. So yeah, I think I find you know as Beatriz.. I care about you know the environment, I care about the air we breathe.. I know that you know airlines are raining down ultrafine particles on communities that they fly over.. I know by publicly available information that airplanes that are coming off of the Oakland airport are flying over East Oakland instead of other areas in order to meet noise reduction requirements, right?.. So you know I find all this problematic and I think that if we expand the airport it will only increase you know those issues that our communities are facing.

1

I find fault in the logic that the increases in demand are inevitable.. You know I think that -- I think expanding the airport you know it's an economic fact and if it weren't expanded I think that there would be you know a reduction in how people use it because you're right it wouldn't be efficient for that but we shouldn't be making it easier to spot,.. right?.. And you know we hear like that that shouldn't matter because airlines are reducing their emissions and that airlines aren't necessarily you know responsible for the emissions of airlines but we also know that the aviation fuels, the sustainable aviation fuels that airlines are using or are transitioning towards have problematic feed stocks, right.. They're fueled by industrial agriculture right and modern cultures which are destroying our environment.

2

The last thing I'll say is that I don't feel that the airport accreditation carbon level, level two, is enough.. I think there should be more like four I guess.

3

Response to Commenter P-404

1. The noise analysis in **Section 3.11** the EIR describes the changes in noise associated with the increase in aircraft operations that would occur with or without the implementation of the Proposed Project. See also Global Response D: Noise and Global Response E: Environmental Justice and Community Engagement for the Port's efforts related to aircraft noise as it relates to community outreach.

Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. Also see Global Response F: Human Health Risk Assessment.

The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase

in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

2. See response to Comment #1 of this letter. The commenter's statement regarding emissions and sustainable aviation fuels is acknowledged.
3. The commenter's statement regarding the Airport's carbon accreditation level is acknowledged. The Port subsequently achieved Level 2 Accreditation: Reduction in 2023 and Level 3 Accreditation: Optimization in 2024. See also Global Response G: Greenhouse Gas and Climate Change.

Commenter P-405

Josh Gutwill

This is a matter of environmental justice. The communities that will be most impacted by increased pollution will be poorer ones. In addition, we simply cannot increase our dependence on air travel., given it's outsized impact on the climate. We should be investing in electric public transit, not dirty, carbon-emitting air travel.

21. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
22. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
23. Aviation is hard to decarbonize and biofuels are not the answer.	5
24. It's too much noise. More Flights= More noise.	6
25. Sea level rise threatens shoreline development.	7
26. Labor rights are at stake.	8
27. Inequity: flying is an elite privilege with high costs for everyone else.	9
28. We have alternatives. Invest in Rail.	10
29. We have alternatives like remote business and conferencing.	11
30. We need to shift towards climate-just transportation.	12

Response to Commenter P-412

1. The commenter's statement regarding breathing fumes and day and night flights are acknowledged.
2. The commenter's statement regarding property values and pollution is acknowledged.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

Construction and operation of the Proposed Project would occur entirely on Airport property and not over Bay Farm or Harbor Bay.

3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-413**David Hall**

<p>Owned my home for 36 years. The increase in the number of flights, and the more frequent commercial use of the north runway is seriously damaging the enjoyment of my home and presumably the health of family and garden. FedEx flights are the worst! There must be noise and pollution testing and abatement. We want OAK to be a good neighbor.</p>	1
	2
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	3
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	4
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	5
3. Aviation is hard to decarbonize and biofuels are not the answer.	6

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged

Commenter P-415**Jon Hamilton**

During times of reverse flow where planes will be arriving into OAK on the South field from Treasure island and departing towards San Jose there is an increase in demand for the South field. The regional jets that normally would land on the North field during normal conditions now nominally would land along with the larger jets on the South field in reverse flow situations. However during busy periods of reverse flow landings the regional jets are often now diverted in a side step procedure to land on the North field and thus transit over the homes of Bay Farm Island (BFI). As the number of larger jets grows this will crowd out the regional jets from the South field reverse flow landings and force even more of the regional jets and also likely some of the larger 737 sized aircraft to now also land on the North field transiting over the homes of the 15,000 residents of BFI.

No study of how large this impact of BFI overflights during reverse flow would become was included in the DEIR. It should be noted also that it is exactly during these weather conditions that force a reverse flow flight pattern that also directs the strong smell of jet fuel over the homes of BFI which further exacerbates the concern of BFI residents.

1

3

Response to Commenter P-415

1. For a discussion of aircraft noise, see Global Response D: Noise.
2. The commenter's statement regarding reverse flow flight patterns directing strong jet fuel smells over Bay Farm is acknowledged.

Commenter P-416**Jon Hamilton**

The DEIR 65 DNL/CNEL curve is a calculation which in the case of the report assumes only departures. Further the types of aircraft used in the analysis for the future estimates are not fully disclosed. The calculation leaves out the following: (1) Reverse flow operational departures and arrivals on the South field (2) North field aircraft departures both excused and non-excused (3) Reverse flow arrivals of aircraft on the North field where arrivals fly over BFI homes (4) Normal operation arrival jet noise on both the N field and South field due to reverse thruster (5) The nearly daily - day long touch and go operations at the North field which has aircraft from all over the Bay Area circling to obtain their licenses (6) Helicopter noise (7) Military aircraft operations in and out of OAK (8) AND VERY IMPORTANT the overflights of SFO departures which traverse over OAK in ever finely defined paths due to the implementation of NextGen.

All of these aircraft noise sources need to be taken in summation when forecasting by calculation the noise impact to the community of Alameda. In the DEIR as it stands this is not the case and the calculation is not valid.

Response to Commenter P-416

1. For a discussion of aircraft noise, see Global Response D: Noise.

Commenter P-417**Jon Hamilton**

Dear Ms. Liang,

The DEIR does not contain credible baseline data (noise, air pollution, light pollution, and traffic congestion) gathered from within the boundaries of Bayfarm or the main island of Alameda, over which there will be overflights from planes taking off and landing from the North Field, and additional traffic impact from relocating and expanding parking and other terminal facilities onto and around the Ron Cowan corridor.

As such, any analysis and projection of impact to the health and safety of Alamedans is entirely without credibility as well. The Port of Oakland should delay the comment period for the DEIR another 18 months in order to install noise, air quality, light pollution and traffic congestion monitors which can scientifically collect such data for a 12 month period of time.

Given that the flight paths over Bayfarm and the main island from the North Field will fly over the San Leandro Slough, a careful monitoring of the flight patterns of so many large migratory birds that visit this area and the wildlife reserves therein would also be prudent. A single bird strike by a plane lifting off or landing near the Bayfarm bridge would be catastrophic.

Such data can be analyzed and projections made, the summary of which can be used to revise the Port's DEIR, and to go through another comment period.

Response to Commenter P-417

1. As stated in **Appendix B**, 2019 was determined to be the baseline year (existing conditions), which was pre-COVID. Section 15125 of the CEQA Guidelines requires an EIR to include a description of the physical environmental conditions in the vicinity of the Proposed Project to act as the baseline physical conditions by which a lead agency determines whether an impact is significant. As the Guidelines make clear, generally the baseline will be the environmental conditions existing at the time when the Notice of Preparation (NOP) is published. However, where existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the Proposed Project's impacts, a lead agency may define existing conditions by referencing historical conditions. The goal of the analysis in the EIR is to disclose the impacts of the Proposed Project to the public and decision makers. To do so, using historical data from 2019, as opposed to the NOP date, to establish the baseline is appropriate to present a fair and accurate description of a Proposed Project's expected environmental impacts. The degree to which aviation demand was reduced due to the COVID pandemic starting in 2020 is considered highly unusual. The NOP was issued in 2021, during a period of extreme change; the operations during this time would not provide a reasonable representation of normal activity. The Port, therefore, believes that the most recent pre-COVID conditions, as experienced in 2019, best represent the existing conditions for this analysis. Also see Global Response C: Baseline Year for a discussion of 2019 as the baseline year.
2. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
3. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
4. See response to Comment #2 of this letter. Refer to Global Response J: Addition of New Information for a discussion on CEQA Guidelines as they pertain to recirculation.

Commenter P-418**Linda Hammond**

There are other ways to boost Oakland economics ... invest in schools and the arts and engaging youth in building a community

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

Commenter P-423
Zhidong and Jiachun Hao

Dear Sir/Madam,

We live at 109 Keil Bay, Alameda, CA 94502. I am writing to offer some comment on the DEIR of the Oakland Airport expansion project.

1

I read it some time ago and found that it is full of technical terms but it doesn't address the most important issues we are concerned about.

For example, it doesn't mention how much more noise the expansion of boarding gates and the increase of both passenger and cargo flights will create.

Right now we are already suffering from frequent noise created by airplanes flying overhead especially at night. This is a problem for us senior citizens when we often have problems sleeping at night and have to endure airplane noise even between 12am and 7am!

The noise pollution is already taking a toll on our health. We cannot afford to move to other places, so we are pleading that you not increase air traffic. Rather we are requesting that you decrease it.

Response to Commenter P-423

1. The commenter's statement regarding noise is acknowledged. For a discussion of aircraft noise, see Global Response D: Noise.

Commenter P-424

K Hare

I already get woken up in the middle of the night by the noisy jets and planes I can't even imagine how much worse it will be

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.
8. We have alternatives. Invest in Rail.
9. We have alternatives like remote business and conferencing.
10. We need to shift towards climate-just transportation.

3

8

9

10

11

Response to Commenter P-424

1. The commenter's statement regarding noise jets is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-425**Carol Harley**

I am very much against the expansion plans.

1

There is already way too high a toll on the people and environment around the existing airport! And you must look to the long view: climate related concerns mean that fewer people will be flying.

2

3

Response to Commenter P-425

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement regarding the existing toll on the people and environment around the Airport is acknowledged.
3. The commenter's statement regarding fewer people flying is acknowledged.

Commenter P-426**Susan Harman**

No airport expansion. We should all stop flying!	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3

Commenter P-427**Janet Harmon**

It's neveracking already with the many jets flying over our house very low in the early mornings and late at night. Too many constantly everyday! It's air polution, and home owners shouldn't have to deal with it after investing in a home for raising a family in a decently quiet neighborhood. It's NOT FAIR healthwise either!

Commenter P-428**Le Harper**

To the Attention of the Port of Oakland and City of Alameda,
 I share many concerns with my Bay Farm Island neighbors, who strongly oppose the
 proposed expansion of Oakland Airport. This project will greatly impact residents and
 schools in its vicinity. With an increase of departing flights and increased usage of the North
 Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would
 mean louder, more frequent noise disturbances and jet fuel released directly over Alameda
 residents and schools. Neighborhoods closest to the South Field runway already experience
 an average sound level greater than the FAA regulated 65dB from aircrafts departing from
 Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect
 impacts like decreased property values, environmental/wildlife concerns, and increased
 vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in
 residential areas, various studies indicate that impacts of aviation emissions remain under
 examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases,
 particles, and ultra particles in a residential area in Boston, MA, concentration of all gases
 and pollutants at the residential area greatly exceeded those measured at regulatory
 monitored sites. Another systematic review of the impact of commercial aircraft activity
 identified dangerous and adverse health impacts, including increased rates of premature
 death, preterm births, decreased lung function, oxidative DNA damage and childhood
 leukemia. These results show the pressing need to understand the direct impact of air
 pollutants from the Oakland Airport on Alameda residents. I am asking that the Port of
 Oakland and the City of Alameda conduct technical, localized studies that are independently
 verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments
 from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases
 and pollutants need to be measured and examined. This is entirely missing in the
 current DEIR and would allow for more accurate estimated noise and air pollution impacts
 on the residents most impacted by this expansion. I request that the Port of Oakland
 explores ALL other potential options to mitigate noise and air pollution impacts (require all
 commercial jets to use the North Field runway, change existing flight patterns, etc.). I also
 request the City of Alameda take a stronger stance in opposition to the expansion. The
 current response is disappointingly neutral and lacks the strong dissent of their citizens.
 Please extend the October 16 deadline until proper due diligence has been done and these
 air and noise pollution concerns have been addressed to mitigate immediate and long-term
 health risks.

Response to Commenter P-428

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The increase in the number of aircraft operations would occur whether or not the Proposed Project is implemented.
3. **Sections 3.4 and 3.13** of the EIR provides an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter’s statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-432**Mary Ellen Harte**

As a person of faith and conscience, I oppose the proposed expansion of OAK. It would harm our community and our climate, disproportionately impacting the most vulnerable including lower income people and those with asthma or other respiratory disease.

1 2

California High Speed Rail and Brightline West will serve many of the airport destinations via high-speed rail. When these systems are complete, approximately 46% of the airport flights can be replaced by high-speed rail! Oakland and Port leadership need to be finding ways to cut carbon pollution, not locking in decades more of it.

3

Response to Commenter P-432

1. The commenter's opposition to the Proposed Project is acknowledged.
2. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.
3. The commenter's statement regarding the high speed rail is acknowledged. The Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.

Commenter P-433**Mary Ellen Harte**

we should encourage cleaner ways of travel, that involve less noise and air pollution than airport travel ..

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-434**Ann Harvey**

Now that impacts of climate disruption are apparent around the world every day, the Port of Oakland should abandon plans to add airport gates. We MUST drastically decrease air travel, an outsized contributor to global warming, as well as a significant source of health-harming ultrafine particle pollution.

1

Commenter P-435

Ann Harvey

A couple days ago the executive director of the Port of Oakland, Danny Wong, was in Hayward testifying in the trial between the would be developers of a coal export terminal and the City of Oakland.. I thank the Port of Oakland for rejecting unanimously by its commissioners a decade ago the pursuit of a coal export terminal by this same Utah coal company.. I'm distressed that now the Port is planning this airport expansion.. Just like a coal terminal it would enable a sizeable increase in Oakland's and the whole Bay Area's greenhouse gas emissions and our contribution to the climate breakdown and it would increase air and noise pollution in the environmental justice community in East Oakland.

1

2

3

I think it was -- to me it's a little offensive how when you presented the noise increase you said since it's expected to be 1.5 decibels increase over areas that already have excessive noise that that's considered insignificant.. That's sort of an aside but like a coal terminal it would saddle us Oakland taxpayers with a stranded asset when people do change their behaviors and stop flying as much because we must.. The climate crisis just the tip of the iceberg now has become so apparent that people are coming around that we need to change on an individual and a macro level our behaviors to drastically cut our greenhouse gas emissions.

One international flight basically doubles the whole annual greenhouse gas emissions attributable to any Bay Area resident.

4

Response to Commenter P-435

1. The commenter's statement regarding the trial between prospective coal export developers and the City of Oakland is acknowledged.
2. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.
3. The commenter's statement regarding noise increase is acknowledged. The commenter's statement regarding changing behaviors to cut greenhouse gas emissions is acknowledged. The Port does not have the authority to require air travelers to use other modes of transportation.
4. The commenter's statement regarding international flight emissions is acknowledged.

Commenter P-436

Ann Harvey

Now that impacts of climate disruption are apparent around the world every day, the Port of Oakland should abandon plans to add airport gates. We MUST drastically decrease air travel, an outsized contributor to global warming, as well as a significant source of health-harming ultrafine particle pollution. We are in a climate emergency. Air travel must decrease drastically. This proposed major airport expansion would have the opposite, extremely harmful effect.

1

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

3

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.

4

5

6

7

8

9

10

8. We have alternatives. Invest in Rail.	11
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	12

Response to Commenter P-436

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement regarding decreasing air travel is acknowledged. The Port does not have the authority to require air travelers to use other modes of transportation. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters,

such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Response to Commenter P-437

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-439

Paul Hauser

Don't you get it? WE ARE IN A CLIMATE EMERGENCY and we need to cut greenhouse gas emissions drastically. Residents of Alameda island are already experiencing the effects of sea-level rise and IT DOESN'T MAKE SENSE FOR THE PORT OF OAKLAND TO CONTRIBUTE TO THE PROBLEM.

1

Response to Commenter P-439

1. The commenter's statement regarding a climate emergency is acknowledged. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-440

William Hauser

There is an additional safety factor in increasing the number of flights taking off at Oakland Airport. When the main runway is closed for maintenance or other issues the aircraft land and takeoff on the adjacent (private aircraft) IOR runway. Your proposed additional aircraft would fly directly over my townhome when the main runway is closed and some of those

1

additional aircraft fly so low that, I would be unable to carry on a phone conversation or listen to my TV due to their noise level. My young grandchildren and animals are going to be even more frightened and attempt to hide. The smell of aviation gas lingers after a commercial jet passes overhead. At times aircraft arriving late at night on the alternate runway have awakened us from a sound sleep. So, no we don't want additional aircraft flying over our home putting us at possible risk. Avoid a potential disaster. Do not expand the airport facilities. Safety should be your number priority.

6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter’s concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter’s statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-445

Tracy Hazelton

With this expansion the additional chemicals from the jet fuel is very concerning. More pollution, noise and overall reduction in quality of life for us in Alameda should be considered.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-445

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.

9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. 11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-446**Alexandra Hein**

I don't want them using the north runway. That would impact noise dramatically in all of Alameda. There is no reason to increase airport size as all airlines pull out of oak except short haul and I don't think they need the additional runway for that

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-449
Jana Henderson

To the Attention of the Port of Oakland and City of Alameda,
I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases,

1

2

3

4

particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

5

6

7

8

Response to Commenter P-449

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The increase in the number of aircraft operations would occur whether or not the Proposed Project is implemented. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provides an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential

and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.

5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-450

Tewfik Henein

We just moved to Marina Fare in April. Although I knew the property is in an Airport zone, I had no idea that we would be inhaling Jet Fumes everyday. I watch planes spooling their engines waiting for another plane to land. I'm hoping there will be creative ways to spare the resident from these harmful particulates. We need:

- Alternative fuels
- Particulate capture
- Efficient engines
- Push back when ready to take off

- Less planes / not more.

Thank you.

1

2

Response to Commenter P-450

1. The commenter's statement regarding inhaling jet fumes is acknowledged. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. The Port does not have the authority to require air travelers to use other modes of transportation.

Commenter P-451**Susan Herting**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2

Commenter P-454
Susan Higbee

Environmental damage to wetlands, increased air pollution! Damaging noise pollution! Dangerous increase in traffic on two support roads (Doolittle and Harbor Bay Pkwy, unnecessary demolishing existing building (improve thru renovation), unsupported claims of increased demand while CA and Bay Area are declining in population, increased risk of catastrophic accident involving many schools in the flight path. Sea level rise endangers existing airport? why increase the risks? Don't do it.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.

9. We have alternatives like remote business and conferencing.
10. We need to shift towards climate-just transportation.

Response to Commenter P-454

1. See **Sections 3.3, 3.4, 3.11, and 3.13** of the EIR for discussions of air quality, biological resources, noise, and transportation, respectively, as they relate to the Proposed Project.

As stated in **Section 4.4.2**, the Terminal 1 ticketing and baggage claim building (M101) would require major retrofitting to meet current seismic and fire code standards if it is to be occupied. Simply upgrading Terminal 1 to meet current codes

would be inadequate to meet Factor 1 Screening criteria. The shallow depth of the Terminal 1 ticketing and baggage claim building (M101) does not accommodate modern passenger and airline processing areas, including airline check-in operations and in-line baggage screening system required to meet TSA standards. The option of expanding Terminal 1 toward the airside to achieve these minimum requirements of current functions would be restricted by site conditions, such as grade differences, airside operations, and other existing support facilities and operations. The option of expanding Terminal 1 toward the roadways would negatively affect roadway operations and would effectively block the visibility of the historic roofline that this option endeavors to retain. Because a retrofit and expansion cannot be accomplished in a manner that would both support operations and maintain its attributes as a historic resource, this alternative would not avoid a significant impact to historic resources. There would be an adverse effect on the level of service provided to the traveling public and to operational functionality (Factor 2 Screening criteria).

For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-455

Blake Hihara

This terminal expansion harms local and global communities. By expanding the airport, more aviation emissions will be baked in. Let us not be Icarus and fly too close to the sun, for our sake and for nature's.

1

Response to Commenter P-455

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions would occur whether or not the Proposed Project is implemented.

Commenter P-456

Irene Hilgers

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

2

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

3

- Aviation is hard to decarbonize and biofuels are not the answer.

4

- It's too much noise. More Flights= More noise.

5

- Sea level rise threatens shoreline development.

6

• Labor rights are at stake.	7
• Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	10

Response to Commenter P-456

Commenter P-458**Howard Hintermeister**

Main concern is reducing jet traffic on the North Field. I will not support Airport Expansion without increased noise reduction efforts and reduction of jet departures over Harbor Bay. (Alameda)

1

Response to Commenter P-458

1. The commenter's statement regarding jet traffic on North Field is acknowledged. The commenter's opposition to the Proposed Project is acknowledged. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

Commenter P-459**Howard Hintermeister**

One of my concerns with the expansion is with the airport's and FAA's willingness to support the existing agreement regarding jet departures from the North Field. We cannot allow increased non-compliant jet departures over the residential neighborhoods of Alameda.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-461

Jim Hite

We have already lost a most of the bay infrastructure, losing more wetland area to expand the OAK is a poor choice for our future. Put the airport where it makes sense and develop high speed rail into the bay area (ala Narita /Tokyo). Think about your great grandchildren. Think about what they'll think; destroying more wetlands to build an airport where it shouldn't be in the first place.

Commenter P-462

Christine Hoex

I have flown out of Oakland airport a few times: I found it easy to navigate and not overwhelming large. This was fine with me.

1

It is my understanding that in light of the devastating effects of the climate crisis air travel needs to be curtailed. The climate is changing now, and air travel will become more dangerous and expensive.

2

Expansion of the Oakland airport is not a good investment! It's a lose-lose situation. If people continue to embrace and increase their air travel it will spell doom for the planet and all short term financial gain will be unappreciated in a collapsed weather ravaged economy. If people greatly reduce their air travel (which they should) then an expanded air port is a poor investment. Please do not expand or increase the capacity of the Oakland Airport.

3

Response to Commenter P-462

1. The commenter's statement regarding their experience flying out of OAK is acknowledged.
2. The commenter's statement regarding the climate crisis and curtailment of air travel is acknowledged. The Port does not have the authority to require air travelers to use other modes of transportation.
3. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-463

Christine Hoex

Please, we need to stop expanding our Fossil fuel infrastructure. That includes air travel. The culture will change one way or another. Either because we choose a less energy intense way of life, or because the collapse of natural systems no longer support life as we know it. It is past time to take this seriously. Capitalism, fun and games has to stop. Myself and many other Activists restrict their flying because of its pollution. There is no capitalist gain from this expansion that compensates for the destructive pollution of the air travel expansion. The time to restrict all airport expansion is now! We have to really change our way of looking at the world. More, Bigger, Faster, is not better. Scaling back our consumption of just about everything must be part of any strategy to save the planet's biosphere for future generations.

5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

**Commenter P-467
Sylvia Holmes**

expansion is short sighted.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 2
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 3
- Aviation is hard to decarbonize and biofuels are not the answer. 4
- It's too much noise. More Flights= More noise. 5
- Sea level rise threatens shoreline development. 6
- Labor rights are at stake. 7
- Inequity: flying is an elite privilege with high costs for everyone else. 8
- We have alternatives. Invest in Rail. 9
- We have alternatives like remote business and conferencing. 10
- We need to shift towards climate-just transportation. 11

Response to Commenter P-467

1. The commenter’s statement regarding the Proposed Project being short-sighted is acknowledged.
2. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-468
hopesalzer

I strongly oppose the expansion of OAK's capacity for unacceptable and unfettered levels of noise pollution and for exacerbating the global climate crisis. It is financially and morally irresponsible to expand carbon-emission-intensive and difficult-to-decarbonize industries rather than expanding high-speed rail electrification and public transit facilities and services.

1

2

Response to Commenter P-468

1. The commenter's statement regarding opposition to the Proposed Project is acknowledged.
2. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.

Commenter P-469
Elizabeth Hopkins-Kurz

People who live around the airport deserve to have their health taken into consideration. Please protect them from further pollution exposure and illness.

Commenter P-472**Mika Hosler**

Climate change is becoming climate catastrophe, and every increase in fuel usage has dire consequences. I want the earth to be inhabitable for the generations of humans and animals and plants after me. Prioritizing the convenience of flying over the future of life on this planet is not conscienable. These funds should be used instead to fund climate-friendly public transport like light rails, trams, or busses that benefit people of a wide range of income levels.

Commenter P-474**Nancy Hu**

Please don't expand the Oakland airport. Airplanes emit so much pollution which is detrimental to surrounding communities, as well as harmful because of the emissions they release contributing to our climate crisis. The wildfires in Maui and the floods and storms in Florida are exacerbated by the warming planet and we need to stop our fossil fuels use. If we need to expand and increase transportation access, let us do it by high speed rail and not by flying.

8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-478

1. The commenter's statement regarding airplane noise is acknowledged.

Section 3.11 of the EIR discusses noise impacts. No significant noise impacts would occur as a result of the implementation of the Proposed Project.

The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Commenter P-479**Gary Hughes**

I work as the "Americas" program coordinator with the organization "Biofield Watch" and we're a member of the "Stop OAK Expansion," and the first thing I want to say is my appreciation for the fact that the deadline of providing written comment has been extended.. It helps me a lot.. I'm just now getting up to speed on some of the

1

documentation and all but I wanted to raise a point right away that falls strictly within the work that we do about addressing the industrial bio-energy sector is I found that the reference to sustainable aviation fuel to be a little bit disturbing because my cursory review of the DEIR is that there's no environmental review within the DEIR addressing sustainable aviation fuel.. So you can't really have it both ways where you wash your hands of the greenhouse gas emissions from increased aviation and then suggest that there's some sort of solution for it.

2

So in your public messaging and in your future efforts on these types of public hearings I would suggest that you drop all reference to sustainable aviation fuel because it's totally outside of the scope of the DEIR.. But what is interesting is that a judge just ruled in Martinez that the environmental review under CEQA of the Phillips 66 refinery conversion to liquid bio-fuels was totally flawed and inadequate and it was decertified.. The judge unfortunately didn't provide any sort of injunction but it's a signal of the fact that the community has been weighing in strongly on the harms arising from liquid bio-fuels and our voices have been ignored and it took litigation to ensure that it was heard.

3

So there's a crisis in climate governments occurring right now in the Bay Area and there's a certain head in the sand approach to what's happening with the climate.. The fact that you suggest that you can expand the number of flights in and out of Oakland International Airport and that it actually is like somehow going to be made okay by schemes like bio-fuels and offsets so that's my brief comment right here.. Two minutes is a very short amount of time but I'm glad I got a chance to say something. Thank you.

4

Response to Commenter P-479

1. The commenter's statement regarding appreciation for the comment deadline extension is acknowledged.
2. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
3. The commenter's statement regarding referencing sustainable aviation fuel is acknowledged. See also Global Response H: Alternative Fuels.
4. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.

Commenter P-480**Gary G Hughes**

It is an imperative that the full climate impacts of aviation be adequately considered before moving forward with an investment for expansion at Oakland Airport. It is time to reframe our transportation habits, and at this critical juncture the Port of Oakland has the opportunity to be a world leader and rein in the projected growth in the aviation sector.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-480

1. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change. The commenter's statement regarding reframing transportation habits is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

We do not need more noise, traffic or pollution that OAK expansion will create. Oakland is a neighborhood first not a through way. Stop using job creation as an incentive. The tradeoffs are not worth ruining the Oakland environment and all surrounding cities.	1
	2

Response to Commenter P-485

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement regarding job creation is acknowledged. **Section 2.5** of the EIR discusses project objectives and Airport needs.

Commenter P-486

Brian Ibarra

I live in Columbia Gardens (Zip Code: 94603) and don't want my family and neighbors to have to deal with an increase in air pollution despite already living right next to a freeway. Not only will the expansion increase air pollution but will also simply make it harder to sleep at night because of all the new airplanes that will be flying in. Please stop the expansion.

12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-489

Christina Ingoldsby

I am very, very against the Oakland Airport expansion. As a customer and a neighbor living in the Oakland hills, I and my family find ourselves now living under two flight paths going right over our home from 7:00a.m. to 11:00p.m. Each and every day!! It is terrible for us. And the thing is-we KNOW it doesn't have to be this way! We have lived in this home for nearly 20 years and this was never the flight path until 2-3 years ago. So, increasing the gates and the flights without finding a MUCH smarter and more equitable way of dealing with the noise, I/we will be against this all the way. Please note and remember: The noise factor for us in the Hills was not always this way and does not have to be this way!

1	2
---	---

Response to Commenter P-489

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement regarding noise is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-490**Christina Ingoldsby**

There is way, way too much flight noise here in the Oakland Hills! We have lived in our home for 18 years and we KNOW it doesn't have to be this way! Up until the last few years, we didn't have a flight noise problem at all. Now we we have two very active flight paths right over our home! The flights are held or re-directed from 11:00pm to 7:00am- but what about the rest of the time- our waking hours! This is a bad and sad situation, and the important thing is: we KNOW that it doesn't have to be this way. Please help us. Thank you, Christina Ingoldsby

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-490

1. The commenter's statement regarding noise is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-491**Michelle Ingram**

I'm a resident of Alameda.. I live in Bay Farm.. To get an idea of where I live when you watch the Blue Angles go over they come right over my house.. I don't call in complaints about the Blue Angels but I spend a lot of time calling in to different flights on the – that come out of the North Field.. My concern is as the traffic on the main runway increases from the 16 gates that the voluntary noise abatement program on the North Field will not be abided by.. I've observed over the years that during big sports events a lot of the corporate jets will fly out of the North Field with no regard for the noise that they create in Bay Farm Island and Harbor Bay.

I worked for several years as a CLASS member.. CLASS was the citizen's group that represents Harbor Bay and Bay Farm and I've just been real disturbed by the commercial aircraft that occasionally come over the North Field.. It feels like we're having an earthquake.. I'm concerned that with the increase -- basically I'm concerned that with this increase in traffic that the situations that we've had to deal with the noise will just continue to increase.. Thank you.

Response to Commenter P-491

1. The future noise contours provided in **Section 3.11** are based on the continued use of these existing flight paths. No changes in flight paths or flight procedures would occur as a result of the Proposed Project. Further, the Proposed Project does not include any airfield changes at North Field. The only development proposed for the North Field is the North Field Lot for employee parking, which would have no effect on flight paths or procedures. See also Global Response B: Flight Paths and Procedures.

The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.

Commenter P-492**Michelle Ingram**

Concern about over abuse of jets flying out of North Field

I've lived here for two years and never imagined the airport could be so inconsiderate of residents. Flights using the north field should be illegal, the dirty and debris put out by the planes is overwhelming, Departures cause our house to vibrate enough to wake us and our baby up each and every day. Complaints have been submitted for years but never get a response. Horrible attitude all around. Many residents are looking to leave the area already due to remote work and the bay area is failing because of it - an expansion will cause even more people to leave and render an expansion redundant. Spent the money on cleaning up oakland and SF (crime, trash, homelessness etc) because nobody wants to visit as it is.

1. The commenter’s statement regarding climate change is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.

9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-502**Elizabeth Jensen**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-502

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR.

The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Commenter P-503

Richard Jepsen

Where might I find the business case for this expansion and modernization? There have been two conflicting narratives:

1. This is needed to meet increasing demand
2. We need to rebrand OAK because it isn't well known in the community.

It seems that there is some intrinsic motivation to do this: community service? FAA requirement? Needed revenue for the Port?

Also, if you are anticipating 30K plane departures/arrivals by 2030 how will that affect the periods that flights happen and the frequency of use of the two runways?

Thank you. I asked these questions orally, but they weren't answered immediately, so I'm ensuring that you have the chance to answer.

Response to Commenter P-503

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

The Proposed Project would not result in an increase in aviation activity. In the past sixteen years, four medium-hub airports (Indianapolis International, Jacksonville International, Louis Armstrong New Orleans International, and Sacramento International) opened new passenger terminal buildings (see **Table P-4** in Global Response A: Aviation Forecast). The national number of enplanements is included in this table as a reference to show national trends in enplanements both before and after these four terminal buildings were opened. In comparing the number of enplaned passengers prior to and after the opening of the passenger terminal building, it is evident that there is no correlation between the construction of a passenger terminal building and an increase in annual enplanements at the same airport. This data shows that the passenger terminal building does not increase passenger demand at an airport. The demand for air transportation is a function of the socioeconomic conditions of the region served by the airport, not the attractiveness of a new passenger terminal building. The Proposed Project would accommodate forecast demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.

2. See response to Comment #1 of this letter. For a discussion regarding flight procedures, see Global Response B: Flight Paths and Procedures.
3. The commenter's statement regarding methods of commenting are acknowledged. Responses to comments are provided in **Appendix P**.

Commenter P-504

Richard Jepsen

Where can I see the business case for the expansion and modernization? I know this is community impact meeting, but I'm confused by the two apparent messages.. One that expansion is needed to meet the demand and the other is that the Port's considering a rebrand because OAK doesn't seem to be efficiently well known.

1 2

How much of this is response to FAA regulatory stuff and how much of it is finance-based and how much mission-based?

3

Response to Commenter P-504

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain

authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

2. The Proposed Project would not result in an increase in aviation activity. In the past sixteen years, four medium-hub airports (Indianapolis International, Jacksonville International, Louis Armstrong New Orleans International, and Sacramento International) opened new passenger terminal buildings (see **Table P-4** in Global Response A: Aviation Forecast). The national number of enplanements is included in this table as a reference to show national trends in enplanements both before and after these four terminal buildings were opened. In comparing the number of enplaned passengers prior to and after the opening of the passenger terminal building, it is evident that there is no correlation between the construction of a passenger terminal building and an increase in annual enplanements at the same airport. This data shows that the passenger terminal building does not increase passenger demand at an airport. The demand for air transportation is a function of the socioeconomic conditions of the region served by the airport, not the attractiveness of a new passenger terminal building. The Proposed Project would accommodate forecast demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. Of the four objectives identified by the Port to meet the current and future needs of the Airport (see **Chapter 2** of the EIR), three of the objectives are associated with meeting market demand that are defined in a forecast that was approved by the Federal Aviation Administration (FAA). See also Global Response A: Aviation Forecast. The fourth objective is to modernize existing terminal facilities to optimize safety and security for passengers and workers.

Commenter P-505

Richard Jepsen

I understand the priorities that the Port has. The idea that new aircraft noise over the homes of Bay Farm will be limited is false on its face. We moved here despite the constant refrain of commercial jets from the southwestern most runway. That all commercial flights will remain on that runway with 17 new gates is laughable. There will be a wave of direct overflights of commercial jets that will make Bay Farm unlivable and destroy homeowner value. This must be stopped or dramatically scaled down to ensure our lives, the ability to live, sleep in some peace and maintain our hard won home value aren't ruined. In addition, while I personally have only been able to cut back on air travel, not eliminated it, I do agree with Sierra Clubs 10 point message in this position and we must get there ASAP.

Commenter P-509**joanbstarr**

Modernization is great, but adding thousands more flights to OAK exposes the airport's neighbors and airport workers to more air pollution, noise, and adds to global warming emissions, which will make California's climate commitments even harder to reach. Every decision we make now is crucial for the future of our planet. [Please reconsider your plans. And please include alternative travel options (such as rail) in your report.]

1

aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-511

Cyndy Johnsen

I'm opposed to this expansion. Given our climate emergency, I think there should be a moratorium on expansions that induce more carbon-intensive travel. I think it's imperative that we *reduce* total carbon emissions dramatically, and quickly, and I'd like to see any upgrades achieve significant net reductions.

1

To address existing and future travel demand, I hope we'll see more investment in train service. We can look to Europe as a model. Personally, I've been trying to do my part by flying less and taking the train where possible. It hasn't been as easy as it should and can be. I see lots of room for improvement. I think others will increasingly make different (and greener) travel choices if we invest in better train service across California and to points beyond.

2

Let's align our plans and investments with our climate and health goals, rather than doubling down on noisy and polluting options like air travel.

3

Thank you.

Response to Commenter P-511

1. The commenter's opposition to the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
3. The commenter's statement regarding aligning plans and investment with climate and health goals is acknowledged.

Commenter P-512

Charles Johnson

As a resident of Alameda, I'm very concerned about the proposed expansion of Oakland Airport, particularly an increase in the number of planes taking off and landing from North Field. People live directly under these flight paths, and pilot noise mitigation is voluntary. Increasing the number of flights on North Field is a non-starter for Alameda residents. Find other ways.

1

Response to Commenter P-512

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in

aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

Commenter P-513

Craig Johnson

The climate crisis is urgent and existential. We must NOT exacerbate this problem with more air travel. 1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons: 2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 3
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 4
- Aviation is hard to decarbonize and biofuels are not the answer. 5

Response to Commenter P-514

1. The commenter's statement regarding air quality impacts is acknowledged. **Sections 3.3** of the EIR discuss air quality. No significant air quality impacts would occur as a result of the implementation of the Proposed Project.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-515**Timothy Johnson**

Oakland airport has recommendations for pilots to reduce neighborhood noise, but there are no rules or consequences for not following the recommendations. I would like to see clear rules with consequences put in place before an expansion of the airport is considered.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-515

- For more than 50 years, the Port has made continuous efforts to develop programs at OAK that minimize noise effects on surrounding communities. Long before today's sophisticated noise-monitoring system was installed, Airport management met regularly with aircraft operators, FAA, and community representatives to develop noise abatement procedures.

The Airport continues to meet with these groups today to seek ways to balance noise concerns with OAK's other concerns and priorities, such as environmental issues, consumer and air carrier demands, economic and employment opportunities, and regional transportation needs, while maintaining safety as its top priority. Pilot education is essential to OAK's noise abatement program to minimize noncompliance. Program information is distributed through established aviation publications, through handouts and posters at Airport facilities and through letters to and meetings with pilots.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-516**James Johnston**

Hi. My name is James Johnston and I live in Alameda near South Shore. I request that this airport not proceed with further growth. Do not build 16 new airport gates with the expansion and also do not build a bussing infrastructure to serve additional flights anyway as the so-called underhanded, sneaky, no project alternative project proposes anyway.

1

Instead please add an option to the EIR that considers a gradual mode shift to rail travel as an alternative while placing a cap on air travel to today's levels. Common sense says this would emit the fewest greenhouse gasses and would thus serve Oakland's net zero 2045 goal.

2

I am sick and tired of watching the places I love get destroyed partially due to climate change and aircraft greenhouse gasses contribute to this problem. The EIR pretends the problem does not exist only considering and measuring aircraft greenhouse gas emissions during taxi, leave off and landing completing ignoring the emissions at cruising altitude.

3

Maybe you can't regulate the emissions but you can sure choose not to grow.

Fortunately we have alternatives like rail travel. 90 percent of the flights departing Oakland go to destinations that are served today by Amtrak and 46 percent of them go to destinations that will be served by California high-speed rail and Bright Line West electrically powered by renewable energy and they're building that right now. But the EIR does not mention high-speed rail even once.

4

So here's an option. Instead of adding more flights to Los Angeles, add another Amtrack train on the San Joaquin's route, gradually shift that traffic to high-speed rail as segments of that are open as the business plan for the high-speed rail proposes. I know you can't, you're not the same government agency as Caltrans or High-Speed Rail Authority but government agencies need to work together to solve this crisis.

5

Response to Commenter P-516

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement regarding a shift to other modes of transportation is acknowledged. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase

in air pollutant emissions would occur whether or not the Proposed Project is implemented.

5. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. The Port does not have the authority to require air travelers to use other modes of transportation.

Commenter P-517

James Johnston

We need to invest in high speed rail instead of airport expansions for the sake of the climate, our health, and the environment. Let's direct the OAK expansion funding towards accelerating the buildup of California High Speed Rail instead, which will serve many of the same destinations that Oakland Airport serves today - enough that the expansion won't be necessary.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-517

1. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-518**James Johnston**

I am writing to submit a public comment regarding the Oakland Airport Terminal Modernization & Development DEIR.

1

I strongly oppose the proposed project in the DEIR and find that the assumptions that it makes about growth are deeply flawed. A different alternative must be provided that considers a mode shift to rail which caps air travel at today's levels. Rail is a mode of transportation which is COMPLETELY IGNORED by this DEIR. A true "no project" alternative that places a cap on growth of air travel cannot be found in this DEIR. Furthermore, the apparently pre-ordained airport expansion proposal will directly lead to growth in air travel, which in turn

leads to growth in greenhouse gasses, which in turn directly contributes to the climate crisis.

**** FLAWED GROWTH ASSUMPTIONS ****

The first problem this DEIR makes is that it assumes growth in air travel will be the same no matter whether the preferred option or the “no project” alternative is chosen. This is obviously a flawed assumption that defies common sense. Why WOULDN’T air travel grow even more if an entire new terminal building is constructed?

* There’s a concept known as “induced demand.” Or in other words: “if you build it, they will come.” This project is exhibit A for inducing demand. By building greater numbers of terminal gates, it will create a market for accelerating the growth of the airport. Passengers might wish to avoid an airport with overly-congested terminals or bussing to remote hardstands. To contrast, they’re more likely to prefer a shiny new terminal building with perfect gates. Soon, there would be a desire for building even more airport facilities to grow even more. (Undoubtedly, there would again be a flawed DEIR with a “no project” alternative that somehow still assumes identical growth!)

* The “hardstands” alternative is also actually still a GROWTH and EXPANSION project. Appendix D proposes an expansion that involves reconfiguring the existing terminal buildings to bus passengers to remote hardstands in order to accommodate a forecasted increase in air travel.

* The project proposal ignores the possibility that if the proposed new buildings are outgrown, they could in turn also be used in a bussing & remote hardstand configuration for additional capacity above & beyond what the “no project” alternative would have provided.

For example, let’s take a simple, hypothetical small airport with one 5-gate terminal that can accommodate 30 flights per day. A “no project” alternative enables only a limited amount of growth from the existing buildings.

1. The starting capacity is 30 flights per day, as stated.
2. Maybe it grows to 40 flights per day and becomes overly congested. Similar to how a congested freeway discourages further passenger vehicle trips, passenger dissatisfaction prevents further growth of air travel.
3. In order to grow capacity, a bussing system to remote hard stands is configured, similar to what is proposed in the “use hardstands” alternative. Let’s suppose that now the existing 5-gate terminal building can now serve 60 flights per day. This is now the maximum of what the existing terminal building can serve. In reality, passenger dissatisfaction might still lead to lower levels of flights than this.

To contrast, our hypothetical airport could grow far more if it followed a plan similar to the proposed option in the DEIR:

1. The starting capacity is 30 flights per day, as stated, out of the single 5-gate terminal.
2. In order to grow capacity, a new 5-gate terminal building is constructed, so that there are now two 5-gate terminals, for a total of 10 gates. Let’s suppose this can also serve 60 flights per day very comfortably.
3. The travel volume now can increase to 80 flights per day with a similar comfort level seen in #2 in the previous scenario. Clearly, this level of growth isn’t possible without constructing a new terminal building.

2

4. The airport wishes to expand AGAIN. The previous construction of the second terminal building means that the “bussing to remote hardstands” option has not yet been tapped. The airport now chooses to bus passengers to remote hardstands from BOTH terminal buildings, thus enabling service of 120 flights per day – far beyond what would have been possible had the second terminal building not been constructed!

While the exact numbers are hypothetical, and my sense of scale may be a little off here, I believe the general principles still apply to a large airport like Oakland. Common sense suggests building new terminal buildings will increase capacity for a given level of service and further enable even more growth at reduced levels of service.

Thus, in summary, there are several problems here:

- * The “no project” option ignores the concepts of induced demand, and inexplicably assumes that growth will happen all the same. It furthermore ignores the negative environmental impacts of that growth.
- * The “use hardstands” alternative is still a growth option that involves bussing to remote hardstands. The environmental impacts of this bussing project and its growth must also be fully considered.
- * Building a new terminal building means there is still the option of bussing to remote hardstands and/or overcrowding that new terminal in the future, which unlocks even further growth beyond what the “no project” option would enable.
- * There is not a “no air travel growth” option presented in this DEIR. That would be the TRUE “no project” option, but it’s not found in this DEIR at all. Instead, air travel growth is assumed as a given that must be accommodated. This is not actually the case; as far as I know, there is no legal obligation to grow the airport and expand capacity in any way, whether by building a new terminal or by further utilizing the existing terminals, such as setting up busses and remote hardstands or simply overcrowding the terminals that exist.

3

By simply choosing not to add more daily flights, supply & demand will cause prices to increase on existing flights, and more passengers will choose to travel via alternate methods that are more environmentally friendly, such as rail or passenger vehicle. Natural market forces will prioritize passengers and flights where other modes of transport are truly not an option, such as overseas destinations or the most time-urgent travel.

**** THE WORST ENVIRONMENTAL IMPACTS ARE IGNORED ****

4

The second major problem in this DEIR is that it ignores the worst environmental impacts which contribute to the ongoing global climate crisis. Air travel is well known for emissions of large quantities of greenhouse gasses. Instead of considering the impact of these gasses, the DEIR instead focuses on trivial things like having a white roof to reduce the heat island effect, or having more energy-efficient HVAC systems. This is lipstick on a pig and honestly an insult to the public’s intelligence!!! While these things are important, none of it really matters compared to the sheer scale of the direct aircraft engine emissions, which the DEIR doesn’t even attempt to fully quantify. What good is an LED lightbulb when there are millions of gallons of fuel burned by the additional aircraft that will utilize the new terminal? Again, the DEIR defies common sense.

The DEIR only quantifies “aircraft emissions below mixing level”, or in other words: taxi, takeoff, and landing emissions only. So, when the plane is at cruising altitude, does it stop emitting greenhouse gasses? Of course not! The DEIR instead just waves its hands and

doesn't even attempt to quantify this, further stating that they can't do anything about it anyway because FAA. Some ineffective unquantified platitudes about sustainable aviation fuel linking to a press release promising 10% SAF usage in some distant future year is not going to be effective in preventing further damage to the climate. The urgency of our climate crisis demands better. The Port of Oakland needs to take responsibility for their role in it, and actually quantify it.

THE DEIR MUST QUANTIFY AT LEAST A PORTION OF THE IMPACT OF AIRCRAFT EMISSIONS AT CRUISING ALTITUDE AS WELL. For example, emissions from the flights of departing aircraft should be fully counted (with arriving aircraft emissions being attributed to the remote departure airport). We can't simply pretend they don't happen! And as noted in the previous section, **THE IMPACT OF THESE INCREASED GREENHOUSE GASSES MUST BE COMPARED VS A TRUE "NO GROWTH" ALTERNATIVE** (which doesn't currently exist in the DEIR).

If the Port of Oakland truly has no authority to mandate true net-zero passenger flights on new or existing flights, **INCLUDING ALL OPERATIONS AT CRUISING ALTITUDE**, then both the Port of Oakland and the City of Oakland needs to take a stand and insist on no further growth in air travel until this situation changes. Any further growth in air travel **MUST** be truly NET ZERO. Mixing in 10% of sustainable aviation fuel is not going to do the job. Only true net zero and renewable options such as 100% electrified flights powered by renewable energy may be considered for additional flights out of the airport. Any other option will be further devastating to this region, state, and entire planet.

**** THE BEST ALTERNATIVE IS IGNORED: HIGH-SPEED RAIL ****

At this point in the argument, many proponents of fossil fuel-based infrastructure might suggest that the alternative must be that we go back to living as cave people with sticks and stones. This isn't true, and there are still alternative ways we can travel in a more environmentally-friendly way. Other countries in Europe have recognized the problems caused by air travel, and are moving to ban air travel in favor of railroads. We should similarly seek to mode shift some of the Oakland air travel from air to rail. By doing so, it will free up additional airport capacity from the existing terminals that can then be used for additional flights to destinations that cannot be reached by rail, such as overseas and international destinations.

Unfortunately, the DEIR does not mention the word "railroad", "train", "rail", or other similar terms even once, let alone consider it as an alternative, despite considering more outlandish options like building a new airport and closing OAK entirely.

The United States in fact has a long history of passenger rail travel, and fortunately, the State of California is leading the country in modernizing passenger rail infrastructure.

Consider the following facts:

- * 90% of Oakland flights serve destinations that are also currently served by Amtrak.
- * 46% of flights serve destinations that will be directly served by future high-speed rail service from California High-Speed Rail as well as Brightline West. Another 10% go to destinations whose rail travel time will be shortened by new high-speed rail segments.
- * The DEIR proposes adding 16 new gates to the existing 29 gates, for a total of 45 gates. This works out so that 36% of the post-expansion gates are new additions.

With 46% being higher than 36%, these numbers prove that if all the short flights to regional destinations in Southern California and Nevada were mode-shifted to high-speed rail, it would free up so much airport capacity that it would be the equivalent of building the proposed new airport terminal! And the upcoming high-speed rail system will have the capacity: when fully constructed, it could serve up to 7,560 passengers per hour – enough to handle every current and forecasted passenger at OAK. Consider that a single train holds up to 900 passengers, the same as several airplanes used for intrastate travel! We were told that CA HSR would be an alternative to spending billions of dollars on highway and airport expansions. So, why are we apparently doing both? We need to commit to rail, and stop with the airport and highway expansions in this state.

Of course, the high-speed rail network is still being constructed. A viable transition plan might therefore look something like the following:

1. The Port of Oakland imposes a cap on daily departures and arrivals to stem further growth, and the unmitigatable problems it brings such as increased greenhouse gasses.
2. Rather than adding new flights, Amtrak adds new train service. For example, rather than adding a new flight to Los Angeles, an additional daily train on the San Joaquin route is added. These existing train routes are in fact quite popular, and often sell out, so additional rail capacity will be needed and can be added as an alternative to adding new flights.
3. Per the 2022 CA HSR business plan, existing segments of California Amtrak service will be gradually replaced by high-speed rail. For example, today's Oakland to Los Angeles Amtrak service would immediately benefit from the CA HSR Initial Operating Segment by shortening the portion of the itinerary traveling through the Central Valley.
4. Eventually, remaining HSR segments are built, ultimately leading to full HSR service between, SF Bay Area, Los Angeles, and beyond. Most to all existing flights to these destinations at Oakland can then be eliminated and replaced with flights to more far-flung destinations.
5. The pace of CA HSR construction seems slow because we have not prioritized it politically. If we gave it adequate funding and attention, similar to other transportation infrastructure projects, it could be finished much faster if desired.

A more detailed analysis and discussion of this option can be found at <https://www.stopoakexpansion.org/trains-voak-departures-study>. I am also submitting a copy of that document separately as a public comment to ensure that it is in the public record.

**** WHY THIS MATTERS TO ME ****

I will end with why this matters to me on a personal level. My wife and I enjoy hiking and backpacking in many of America's beautiful and natural places. Unfortunately, the places we visit keep getting degraded and destroyed due to factors partially attributable to climate change:

- * We backpacked a few nights in Lassen Volcanic National Park in 2018. Everywhere we went burned in high intensity fire as part of the 2021 Dixie fire.
- * We had the opportunity to backpack once in Big Basin State Park in 2020. Everything in the park promptly burned to the ground as part of the 2020 CZU fire complex.
- * After having the privilege of hiking twice in Redwood Canyon at Sequoia National Park in 2020, the area promptly burned in the 2021 KNP fire complex. In fact, the National Park Service states that 13 to 19 % of the world's large sequoias perished in the 2020 and 2021

6

fires! These are irreplaceable losses to the world, and this rate is not sustainable.

<https://www.nps.gov/articles/000/wildfires-kill-unprecedented-numbers-of-large-sequoiatrees.htm>

- * Two separate wildfires in Big Bend National Park subsequently burned some of our favorite areas after we recently visited, including historic structures and some of the nicest higher elevation areas of the park.

- * Most recently, we were literally chased by a wildfire just last month in the RAINFOREST in Olympic National Park that blew up out of nowhere while on a multi-day backpacking expedition. This region has abnormally had less than half of the normal rainfall so far this year, per a park ranger. After a day of watching the fire front only a few miles away from our trail in a massive plume of smoke, we actually had a firefighting helicopter land near our campsite and ask us for assistance in posting trail closure in the valley below us – the very trail we had been hiking earlier that day (!!!).

While fires have always been part of these ecosystems, the rate at which these areas are burning is unprecedented and has dramatically increased in recent years. Climate change plays a huge role in this increase in fire activity, and the Oakland Airport expansion project would directly contribute to further increases in fire activity.

And there are non-fire related impacts:

- * The Sierra Nevada mountains have the most adorable rodents that live at high elevation, known as pikas. We love to see them on our trips. Unfortunately, despite being located in protected federal wilderness, they are dying out due to climate change. During the summer, pikas gather food to store for the winter. However, if it gets too hot, it must rest more frequently, and it might not have enough food stored by winter. Unfortunately, this is exactly what is happening, and studies show that pikas have already been extirpated from lower-elevation areas in the Sierra Nevada where they once roamed.

- * We have also been privileged to snorkel and view coral reefs in places like Hawaii and Florida on a couple of occasions, such as Hawaii in 2015. Unfortunately, these are destined for destruction as part of climate change due to bleaching. In fact, family members who more recently traveled to the same Hawaii reefs in 2023 reported that the reefs were already significantly degraded beyond what we had seen in 2015.

Finally, the very place I rent from and live near the beach in Alameda is under threat from sea level rise. People sometimes ask if I consider buying property in Alameda. I respond if they like to play musical chairs – who wants to be stuck with the property at the end? Sea level rise will ultimately inundate parts of the city, if not the entire city.

I AM SICK AND TIRED OF WATCHING THE PLACES I LOVE GET DESTROYED FROM CLIMATE CHANGE.

Please, I ask the Port of Oakland to do the ONLY RIGHT AND MORAL THING and STOP this expansion, because the additional greenhouse gasses is only going to make all the above problems WORSE! What good is an airport if the destinations are being actively degraded destroyed by climate change?

****** CONCLUSION ******

If nothing else to take from this public comment, please take this: take a hard stand against further growth of greenhouse gas emissions, including aircraft at cruising altitude. There are other alternatives you haven't considered, and our future depends on it!

8

Response to Commenter P-518

1. The commenter's opposition to the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. The Port does not have the authority to require air travelers to use other modes of transportation. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion regarding forecast growth, see Global Response A: Aviation Forecast.
3. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
4. The Proposed Project is intended to better accommodate the forecast market demand in aircraft operations and enplanements.

The EIR identifies impacts that could occur but that the Port does not have the authority to control. These impacts are generally associated with aircraft operations. While OAK is subject to the regulatory authority of the FAA and TSA, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

5. The commenter's statement regarding a shift to other modes of transportation is acknowledged. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
6. The commenter's statement regarding why this matters to them is acknowledged.
7. The commenter's opposition to the Proposed Project is acknowledged.
8. The commenter's statement regarding taking a stand against the growth of greenhouse gas emissions is acknowledged. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

Subject: [EXTERNAL] Appendix to my public comment regarding rail travel alternative for terminal modernization & development DEIR
Date: Monday, October 16, 2023 1:31:54 PM
Attachments: image001.png

The sender of this message is external to the **Port of Oakland**. Do not open links or attachments from untrusted sources.

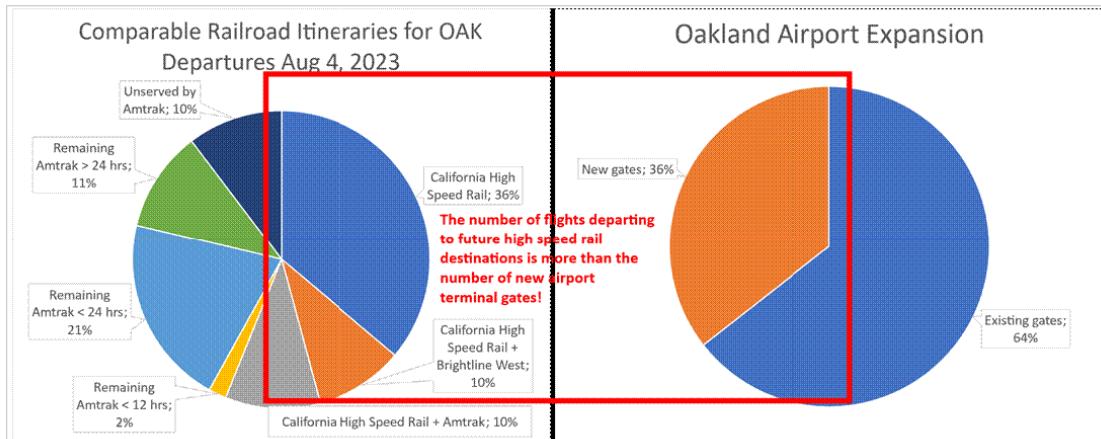

Hi,

This message can be considered as an appendix to my public comment that I just submitted regarding the terminal modernization & development DEIR. It is a copy of the document posted at <https://www.stopoakexpansion.org/trains-v-oak-departures-study>. I am the author of that document, and I wish for it to be also considered a public comment, and part of the public record, and considered as an alternative in the EIR. I believe it is the most viable, environmentally-friendly option.

James Johnston

Rail as an alternative to the Oakland International Airport expansion

California high speed rail will emit fewer greenhouse gas emissions than aviation, and most airport destinations are already reachable via today's Amtrak service.

Introduction

We are in a climate crisis: the world just experienced the hottest July on record yet at 1.5 °C above pre-industrial temperatures.^{III} For many Californians, this isn't just an abstract issue: climate change is a contributing factor to the increase in wildfire throughout the state. Homes and communities are destroyed, as well as natural wonders cherished the world over. For example, groves of ancient giant sequoia trees that thousands of Californians once camped under are now dead, just another statistic as part of the 13% to 19% of the world's giant sequoia trees killed by fire in only the last 3 years.^{III} These are irreplaceable losses.

1

The State of California has recognized this problem and has set a goal of reducing greenhouse gas emissions to 85% below 1990 levels.^{IV} The City of Oakland has gone farther and declared a climate emergency, setting forth a net zero goal for the year 2045.^{IV}

Aviation contributes to this problem. Every flight at Oakland International Airport (OAK) contributes significant greenhouse gases and localized air pollution. Every flight is therefore directly responsible in a small part for destroying somebody's home from fire or flood, degrading favorite locations in nature, threatening the world's future water and food supply, or even contributing to someone's death due to air pollution. While solutions like aircraft electrification, sustainable aviation fuel (SAF), and/or hydrogen might someday be able to enable sustainable air travel,^V they are likely many decades into the future and are unlikely to arrive soon enough to help with the current climate crisis.

Meanwhile, the Port of Oakland proposes to expand OAK by building 16 new gates, a 55% increase, to accommodate a significant growth in air travel.^[vii] Barring that, they propose to set up a busing infrastructure that will increase air traffic by an equivalent amount using the existing terminal gates over the coming decades^[viii]. No alternative is considered that would hold air travel, and therefore climate-warming greenhouse gases, to the current levels today.^[ix] This flies in opposition to the declared net zero climate goals of the City of Oakland.

However, avoiding aviation doesn't mean we can't sustainably travel to many of our favorite destinations. This article takes a closer look at the passenger flights utilizing Oakland International Airport to demonstrate that approximately 90% of the flights departing from OAK go to destinations that can also be reached via today's Amtrak service. In future years, electrified California High Speed Rail and Brightline West service powered by renewable energy will also reach many of the most popular destinations and could replace approximately 46% of the flights utilizing OAK today.

We know how to electrify ground transportation with renewable energy using today's proven technology: it is only a matter of political will to build it. Other countries around the world are already doing this. It doesn't require aspirational technology that might not be deployed at scale for the next few decades.

Methodology

The flight departures listed on Oakland International Airport's website for August 4, 2023, were individually examined to see whether there is comparable rail/Amtrak service available.^[x] Therefore, this examines the same flights you would see if you examined the flight status televisions inside the airport on that date. For every listed flight, the following information was gathered:

- A check for existing Amtrak service was made by going to Amtrak.com and searching for travel from the Oakland Jack London Square Station (OKJ) to a station near the original destination airport. The shortest travel time and type of route segments were then noted. For travel involving the California Zephyr train, Emeryville (EMY) was used as the origin station instead, since that train does not serve OKJ.
- The route was checked against the California High Speed Rail interactive map of future service to see whether high speed rail could yield future service improvements to existing Amtrak service.^[xi]
- The route was also checked against the Brightline West map of future service.^[xii]
- Finally, the route was compared with the Amtrak Connects US Corridor Vision for future Amtrak service improvements.^[xiii] This document was published by Amtrak in June, 2021 and proposes the most likely future locations and routes where Amtrak service could be extended.

The results were then grouped by destination and sorted by number of flights. Every Amtrak itinerary was classified by the duration: < 12 hours, < 24 hours, and > 24 hours, and flagged with potential service improvements that can be brought by California High Speed Rail, Brightline West, and Amtrak itself.

There are limitations of this method because only one day of flight departures was considered. It is assumed that if these limitations were addressed it would not significantly affect the results; however, further investigation was not done due to time limitations preparing this report:

- Flights that do not operate daily are therefore not fully considered: they would not be considered at all or would be incorrectly assumed to be daily. For example, some flights serving less-popular destinations might only operate on days surrounding the weekend.
- Any seasonal variations in flight patterns are also not considered.
- Only departures were examined. It is assumed that an additional consideration of arrivals would not significantly change the results.
- Flights related to general/private aviation or cargo flights are not considered. If a flight status isn't published on the passenger terminal televisions, it isn't considered.

Next, the number of existing airport gates is compared with the planned number of airport gates after the expansion. The assumption being made here is that the number of new gates can be used as a rough proxy for the planned increase of air traffic. This is a reasonable assumption because the draft EIR states in the project's Objective 2 that the proposal will maintain "industry standard levels of service" while accommodating planned increases in air traffic.^[xiii] In other words, they want to build more gates to accommodate more traffic so that the existing gates do not become more crowded.

Results

The table below summarizes the flight departures for Oakland International Airport on August 4, 2023, along with comparable rail service, if any.

Each leg of Amtrak service is delimited by a comma. If multiple reasonable Amtrak routes exist for a section, they are delimited with a slash. Segments can be grouped together with parenthesis. For example, "Coast Starlight/(San Joaquin, bus), Texas Eagle" means that you could take either the Coast Starlight train to Los Angeles, or take the combination of the San Joaquin train and a bus to Los Angeles. You'd then transfer to the Texas Eagle train in Los Angeles.

The table is graphically summarized in the pie chart at the top of this report.

Based on the table below, we can see that 90% of the flights are serving destinations already served by Amtrak today. Furthermore, 46% of

APPENDIX P – DRAFT EIR COMMENTS AND RESPONSE TO COMMENTS

these flights serve destinations that will also be served with planned high-speed rail, such as common destinations like Los Angeles, San Diego, Las Vegas, Burbank, and Orange County. Another 10% of the flights serve destinations whose future Amtrak itineraries could utilize planned high-speed rail to shorten the trip.

# Flights	Destination	Today's Amtrak Service	Today's Amtrak Duration	Future Service Improvements
15	Las Vegas, NV	San Joaquin, bus	< 12 hours	A combination of future CA HSR and Brightline West service could completely replace existing Amtrak service. Amtrak Connects US also plans new service from Los Angeles to Las Vegas.
14	Los Angeles, CA	Coast Starlight/(San Joaquin, bus)	< 12 hours	Los Angeles is a CA HSR phase 1 station.
13	San Diego, CA	(San Joaquin, bus)/(Coast Starlight, Pacific Surfliner)	< 12 hours	San Diego is a CA HSR phase 2 station. As an intermediate step, CA HSR phase 1 could connect to San Diego via existing Pacific Surfliner service.
11	Seattle/Tacoma, WA	Coast Starlight	< 24 hours	
10	Burbank, CA	Coast Starlight/(San Joaquin, bus)	< 12 hours	Burbank is a CA HSR phase 1 station.
10	Portland, OR	Coast Starlight	< 24 hours	
9	Orange County/Santa Ana, CA	(San Joaquin, bus)/(Coast Starlight, Pacific Surfliner)	< 12 hours	Anaheim is a CA HSR phase 1 station.
6	Denver, CO	California Zephyr	> 24 hours	
6	Phoenix, AZ	Coast Starlight/(San Joaquin, bus), Sunset Limited, bus	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Sunset Limited service. Amtrak Connects US also plans better service from Los Angeles to Phoenix without a bus connection.
6	Salt Lake City, UT	California Zephyr	< 24 hours	
5	Long Beach Municipal Airport	Coast Starlight/(San Joaquin, bus), connect to LA Metro	< 12 hours	Los Angeles is a CA HSR phase 1 station where passengers can transfer to LA Metro service to Long Beach.
5	Ontario, CA	San Joaquin, bus	< 12 hours	Ontario is a CA HSR phase 2 station. As an intermediate step, CA HSR phase 1 could connect to Ontario via existing Metrolink service.
3	Bellingham, WA	Coast Starlight, Cascades	> 24 hours	
3	Chicago-Midway, IL	California Zephyr	> 24 hours	
3	Honolulu, HI	None		
3	Kahului, HI	None		
3	Lihue, HI	None		
2	Boise, ID	Coast Starlight, Empire Builder, bus	> 24 hours	
2	Crescent City, CA	Coast Starlight, bus, bus	< 24 hours	
2	Dallas-Love Field, TX	Coast Starlight/(San Joaquin, bus), Texas Eagle	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Texas Eagle service.
2	Eugene, OR	Coast Starlight	< 24 hours	
2	Guadalajara, Mexico	None		
2	Reno, NV/Lake Tahoe, CA	Capitol Corridor, bus	< 12 hours	Capitol Corridor might be extended to Reno.
2	Spokane, WA	Coast Starlight, Empire Builder	> 24 hours	
1	Albuquerque, NM	San Joaquin, bus, Southwest Chief	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Southwest Chief service.
1	Austin, TX	Coast Starlight/(San Joaquin, bus), Texas Eagle	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Texas Eagle service.
1	Dallas/Ft. Worth, TX	Coast Starlight/(San Joaquin, bus), Texas Eagle	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Texas Eagle service.

1	Houston-Bush Intl, TX	Coast Starlight/(San Joaquin, bus), Sunset Limited	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Sunset Limited service.
1	Houston-Hobby, TX	Coast Starlight/(San Joaquin, bus), Sunset Limited	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Sunset Limited service.
1	Kansas City, MO	San Joaquin, bus, Southwest Chief	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Southwest Chief service.
1	Kona, HI	None		
1	Mexico City, Mexico	None		
1	Missoula, MT	None		Big Sky Passenger Rail Authority is currently advocating for new connecting rail service in Montana.
1	Morelia Airport	None		
1	Newark, NJ	California Zephyr, Capitol Limited, Pennsylvanian	> 24 hours	
1	Palm Springs, CA	Coast Starlight/(San Joaquin, bus), Sunset Limited	< 24 hours	CA HSR to Los Angeles will improve the connection to existing Sunset Limited service. Amtrak Connects US also plans better service from Los Angeles to Palm Springs.
1	Philadelphia, PA	California Zephyr, Capitol Limited, Pennsylvanian	> 24 hours	
1	San Salvador, El Salvador	None		
1	Santa Barbara, CA	Coast Starlight	< 12 hours	Amtrak Connects US proposes new service separate from the Coast Starlight between San Jose and San Luis Obispo.
1	St. Louis, MO	San Joaquin, bus, Southwest Chief, Missouri River Runner	> 24 hours	CA HSR to Los Angeles will improve the connection to existing Southwest Chief service.

Next, we note that the existing airport has 29 gates, and the draft EIR proposes 45 total gates, for a net increase of 16 gates. This works out so that 36% of the post-expansion gates are new additions.

Discussion

The results demonstrate that if popular flights were completely mode-shifted from planes to California High Speed Rail, enough airport gate capacity would become unused in an amount like what the proposed airport expansion would provide. In other words, the airport expansion does not need to be built to accommodate forecasted growth in the traveling public if everyone going to Southern California and Las Vegas took high-speed rail instead.

Of course, such a mode shift cannot happen overnight. Amtrak does not currently have the capacity to serve every passenger at Oakland International Airport. When fully constructed and at the maximum theoretical capacity, California High Speed Rail will unlock a considerable passenger capacity of 7,560 passengers per hour – enough to handle every current and forecasted passenger at OAK^[xv] – but it does not exist yet. Consider that a single CA HSR train will hold 900 passengers – the same as up to 7 airplanes used for intrastate travel! And CA HSR will be advanced enough that a train can leave every few minutes.

A slower transition plan could therefore look something like this:

1. The Port of Oakland holds the number of daily departures at the airport to today's levels, without further growing the number of passengers or flights.
2. Amtrak's capacity is gradually increased as an alternative to adding additional flights. For example, additional trains could be added to the existing San Joaquin train as an alternative to adding new flights to Los Angeles. Existing flights to Los Angeles could also be gradually removed to make room for flights to more distant locations as needed.
3. Per the 2022 CA HSR business plan, the Initial Operating Segment of high-speed rail can be used to reduce the travel time for San Joaquin passengers.^[xvi] Passengers would ride the San Joaquin to Merced, transfer to high-speed rail, and then transfer to the existing bus system in Bakersfield.
4. CA HSR continues to expand. The bus from Bakersfield to Los Angeles is eventually replaced with another high-speed rail segment. Similarly, service from Merced to San Francisco begins.
5. California High Speed Rail is fully built out, and most flights from Oakland to Los Angeles and other Southern California airports are subsequently eliminated. Existing airport capacity is now used for new flights serving farther distances. East Bay passengers who wish to travel south could travel to San Francisco or San Jose via BART to directly board CA HSR or continue to utilize San Joaquin or future Altamont Corridor Express (ACE) service to Merced.

It will be critical for the agencies and companies involved to coordinate ticketing. Existing coordinated payment systems are limited to metropolitan areas, such as the Clipper Card system in the SF Bay Area. This type of coordination needs to be expanded statewide for regional travel. If passengers must separately purchase tickets for Amtrak, California High Speed Rail, LA Metrolink, and Brightline West to reach Las Vegas, adoption will be low. Such an itinerary must be purchased on a single ticket, like what passengers expect from airlines today.

An examination of the most popular flights from Oakland suggests other obvious potential high-speed rail corridors beyond the existing CA HSR system currently planned. Coincidentally, the corridors that might make sense seem to parallel existing long distance Amtrak routes. For

example, service from Sacramento, to Eugene, to Portland, and then to Seattle. Another corridor might be Sacramento, to Reno, to Salt Lake City, and to Denver. The latter would be considerably farther than CA HSR, but it is still a small system compared to HSR systems in other countries.

Not every flight can be replaced with a train. Hawaii is and will remain a popular destination, for example. However, by gradually replacing short-haul flights with ground transportation, we will buy time for more sustainable (and potentially more expensive) aviation to become available for these longer flights. (For example, an air to fuels system utilizing direct air capture and powered by renewable energy would avoid the use of fossil fuels, but would be very expensive in comparison.)

Conclusion

The draft EIR from the Port of Oakland considers dramatic alternatives like building an entirely new airport in the region and closing OAK

^[xvi] completely. Yet it does not mention rail travel even once in the entire EIR, let alone the high-speed rail that anyone can see is actively being built in the Central Valley at this very moment. This is a glaring omission!

The Port of Oakland needs to consider mode shifting passengers from planes to high-speed rail as an alternative. The Port has unfortunately

^[xvii] considered only aircraft greenhouse gases from taxi, takeoff, and landing in the EIR. If the true end-to-end greenhouse gas emissions of each added flight were considered, common sense suggests this proposed alternative would be the clear environmental winner.

But not only is high-speed rail a winner for the atmosphere; it is also a passenger capacity winner. With a huge upper bound on the maximum number of passengers the system can accommodate, high-speed rail will easily outstrip any capacity expansion that the Port of Oakland can ever hope to build.

We can have our cake and eat it too. Insist that the Port of Oakland consider high-speed rail as an alternative to airport expansion.

^[v] <https://stay-grounded.org/greenwashing/#factsheet>

^[vi] The draft EIR proposes 16 new gates in section 2.6.2, "Passenger Terminal Improvements." This is to accommodate a growth in aviation activity forecasted in section 2.4, "Forecasts."

^[vii] The draft EIR insists that air travel must be increased anyway in section 4.5.1, "No Project Alternative." The same aviation activity increase forecasted in section 2.4 would be accommodated by busing passengers from gates at the terminal building to aircraft parked at remote hardpoints with boarding stairs, as described in the draft EIR Appendix D, "No Action Analysis".

^[viii] All alternatives considered by the draft EIR are listed in chapter 4, "Alternatives." Sections 4.4 and 4.5 list the alternatives ruled out from further review, and the evaluated alternatives, respectively. No considered alternative examines the use of rail as an alternative mode of transportation.

^[ix] Flights were gathered from the Oakland International Airport flight status page at <https://www.oaklandairport.com/airlines/flight-status/>. The search parameters were for "Flights from Oakland International Airport" (departures), a date of "08/04/2023", "All Airlines", "All Airports", and "Both Terminals."

^[xiii] Draft EIR, section 2.5.2, "Objective 2 Criteria"

^[xiv] The CA HS Rail Authority stated in the 2019 Equivalent Capacity Analysis Report in chapter 2 that the maximum is 7,560 passengers per hour, per direction. It does not represent initial planned service levels. The aviation capacity analysis goes on to point out that 20% of HSR's capacity is the same as 91 airport gates! https://hsr.ca.gov/wp-content/uploads/docs/about/business_plans/2020_Business_Plan_2019_Equivalent_Capacity_Report.pdf

^[xv] The California High Speed Rail Business Plan for 2022 under chapter 2, "Merced to Bakersfield Makes Sense as the First Operating Segment", describes in more detail how the Initial Operating Segment can be used to improve travel time for existing San Joaquin passengers.

^[xvi] Draft EIR section 4.4.5, "Develop New Airport Site in the Region and Close OAK"

^[xvii] Draft EIR section 3.7.3.2, "Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment GHG Emissions". The "Operational Emissions" section contains table 3.7-3, which only lists "Aircraft emissions below mixing level, including APUs." Mixing level is defined elsewhere as

3,000 feet. Thus, additional aircraft emissions at altitude cruising to the destination are not considered at all.

Response to Commenter P-519

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.

Commenter P-520

Matthew Jones

We need to shift our thinking from endless growth towards shifting our economy in a sustainable direction. Without major progress on emissions reductions and fuel efficiency in the airline sector, I cannot recommend approval of an airport expansion. As a consumer, I am actively taking steps to reduce my carbon footprint and am substituting driving and flying with train travel and biking. I fully endorse more transit and electrifying our transportation systems and shifting away from major polluting methods. Lastly, we are one region. I'm sure some people in the industry say this expansion is needed to make Oakland competitive with SFO. As a consumer who lives in Oakland, it doesn't matter which airport of the 3 major ones I go to. The Bay Area is the Bay Area. We don't need to compete against each other - let's work together to grow together - sustainably, please.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.
- We have alternatives. Invest in Rail.
- We have alternatives like remote business and conferencing.
- We need to shift towards climate-just transportation.

Response to Commenter P-520

1. The commenter's opposition to the Proposed Project is acknowledged.
2. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
3. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
4. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
7. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
8. For a discussion of aircraft noise, see Global Response D: Noise.
9. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
10. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
11. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
12. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-521

Zoe Jonick

I'm a youth climate organizer with 350 Bay Area and I'm here to speak against the Oakland Airport expansion.. The main reason that comes to mind with the expansion is that it's simply just a bad investment.. It's a ton of money that's going to go to something that is just not going to be assured.. It said on the thing I think something like 14 million flights or whatever by 2038 but like have you guys been noticing how every year things are getting worse and worse and worse like exponentially?

So by 2038 things are going to be incredibly different and we will have no other choice but to transition to alternative forms of transportation so why not do that now rather than later instead of wasting all this money on to something that is going to not going to -- it's going to be regulated basically pretty soon.. And also with sea level rises some people have mentioned it is a terrible threat as they're concerned and see a foot of sea level rise by 2040 I believe.

I also wanted to say that there was some things in there about there not being a significant amount of impact but the impact right now is significant.. The impact right now on the community is that the airport is next to that the planes fly over, that's significant and I don't think that's being taken into account here.. The fact that the airport was intentionally put in neighborhoods that have less political power and less capital to complain about these things and the fact is that this neighborhood has worse health impacts, rates of asthma, rates of sickness from particulates and from other things like that so any kind of increase is unacceptable.. Also any kind of increase on the health impacts for airport workers is unacceptable.

It said that it was significant and unavoidable.. That is not okay.. Thank you.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-524**A K**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Commenter P-530
Jesse Kang

To the Attention of the Port of Oakland and City of Alameda,
 I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents. I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently

1

2

3

4

5

verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion. I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks. Sincerely, Jesse Kang

Response to Commenter P-530

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD

ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-531

The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-533**Julianne Kapner**

We need more investment in transportation -yes. But when we're making cuts to public transit (e.g., AC Transit and Bart) while supporting airport expansion, we're supporting already privileged people!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-533

1. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-534**Karilyse**

In addition to the poor air quality and excessive noise, which did not exist at the time I purchased my home, the Oakland Airport is interfering with other services.

1-The airport has interrupted digital television signals. Expansion will completely remove the ability to access television, a major source of communication. This is a source of news as well as entertainment. AT THE VERY LEAST, if the expansion proceeds, the airport should be required to pay for or provide streaming services to impacted homes on Bay Farm.

2-Bay Farm has limited access to Internet Service Providers. The airport disruption prevents smaller providers from being able to provide service and the two mega providers take advantage of their customers knowing our options are limited.

1

3-Cellular service is already impacted by the airport causing dropped calls. Landlines are no longer available and interruptions to cell service mean that there may be no communication available in an emergency.

4-If the airport is permitted to expand, they should be required to provide home air filtration systems. I am a senior citizen and am already feeling the impact of the decrease in air quality over the past few years.

2

Response to Commenter P-534

1. The commenter's statement regarding the airport interfering with other utilities is acknowledged.
2. The commenter's statement regarding air filtration systems is acknowledged.

Commenter P-535

Meghana Karumuri

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-536

Kathryn

Just had to close my patio doors because the noise of the planes passing overhead was interfering with this presentation. This happens every day. I live on Bay Farm. We have no A/C. So we have to decide between being hot or sleeping, carrying on a conversation, listening to TV, etc.

1

Response to Commenter P-536

1. The commenter's statement regarding noise from planes passing overhead is acknowledged.

Commenter P-537**Kathryn**

So none of the buildings/structures that were built in the 60's have lead, asbestos in the materials used?

1

Response to Commenter P-537

- As described in **Section 3.8.2.3**, there may be asbestos containing materials (ACM) within the buildings proposed for demolition. Prior to demolition, a pre-demolition survey would be performed to identify hazardous building materials including ACM. These materials would be abated prior to demolition and disposed of at a landfill authorized to accept such waste.

Commenter P-538**Kathryn**

Would we be listening to construction, pile drivers all day long?

1

Response to Commenter P-538

- As described in **Section 3.11**, off-site construction noise is not anticipated to result in significant impact.

Commenter P-539**Dee Kay**

I have always used our East Bay airport as a human-sized alternative to SF and loved the BART connection. But why would I do that if there is an inconvenient, unnecessary and anti-environmental push to turn it into SFO? We all need to fly less anyway to save the planet, so respond to your community!

1

Response to Commenter P-539

- The commenter's statement regarding their use of the airport is acknowledged. The commenter's opposition to the Proposed Project and need to fly less is acknowledged.

Commenter P-540**Michala Kazda**

Hello, my name is Michala Kazda and I am an Alameda resident who lives 5.5 miles from Oakland airport. I have major concerns about this project for a few reasons.

1

the added noise
the added pollution
the environmental impact on the surrounding areas

the majority of the destinations to and from Oakland are served by Amtrak which should be expanded on.

2

thank you for your time.

Response to Commenter P-540

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.
2. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.

Commenter P-541

Meh Keeley

11

Response to Commenter P-543

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo

Commenter P-546**Kevin**

Expanding the airport capacity will increase noise levels from more jets. Another concern is all children near airport exposed to high lead levels if the airport travel flow expands significantly. As an Oka airport neighborhood, I don't want this happen due to this project. I do want city do more investigations on how this expansion will impact people health by noise and lead levels.

1 2

Having flights day and night go over our homes is a horrible proposal. If project do expand, I think it should build runways that point into the bay and not over homes as a compromise.

3

Response to Commenter P-546

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
3. The Proposed Project does not include any changes to runways or runway use. The Port does not have authority to regulate flight paths and procedures. Federal regulations, enforced through the FAA and TSA, have authority over aspects of air travel including passenger safety and transportation security. Federal regulations require certification of airports, pilots, and aircraft. Operators are required to maintain safe premises and enforce security measures. See also Global Response B: Flight Paths and Procedures.

8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-548**Jinkyong Kim**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-548

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-555**June Kori Kody**

I oppose the expansion of the Oakland Airport. It will be harmful for the community -- resulting in deleterious effects on both the immediate neighborhood and on the larger environment. The increased air traffic will mean additional particulate air pollution and additional noise which directly injures the health of neighboring communities. From a global perspective, this the time when we should be reducing greenhouse emissions in the face of global warming and climate change. Expanding the airport -- and at such a huge scale -- is, literally, flying in the face of the reality that we should be cutting back on flights and looking to alternative, less polluting, forms of transportation.

1	2

Response to Commenter P-555

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.
3. The commenter's statement regarding reducing greenhouse gas emissions globally is acknowledged.
4. The commenter's statement regarding a shift to other modes of transportation is acknowledged. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

Commenter P-556**June Kori Kody**

This is the wrong project at the wrong time -- big mistake. It will degrade the environment and life quality for local communities. We should be supporting alternate forms of transportation that are less destructive to the environment such as high speed rail, local vacations, remote meetings that allow greater, more inclusive participation. Increasing air flight means more pollution in terms of carbon emissions contributing to global warming as well as noise and other health and life quality impacts.

• We need to shift towards climate-just transportation.	12

Response to Commenter P-556

1. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. 2. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-559**Karen Kokame**

I am very concerned about the increase in departing flights and increased usage of the North Field runway that directs airplanes over Bay Farm Island and the Main Island. The disturbance from the noise is already often and loud, impacting schools and residences. To think that the airport is considering increasing the airport by 50% is unfathomable. Concerns include environmental and wildlife concerns, more traffic and more noise and air pollution. Further studies should be conducted from an independent party to determine the effects on noise and air quality on Bay Farm in particular. Why doesn't the Port of Oakland look into more options to mitigate noise and air pollution? As an example, when I lived in Orange County, the planes take off in a high trajectory and then cut the engines back to mitigate the noise on the neighborhoods below. This expansion should not be approved until further due diligence is conducted. To disregard the disapproval of the neighboring community is very disappointing.

1. Noise impacts of the Proposed Project were analyzed in **Section 3.11** of the EIR. The future noise contours provided in **Section 3.11** are based on the continued use of these existing flight paths. No changes in flight paths or flight procedures would occur as a result of the Proposed Project. Further, the Proposed Project does not include any airfield changes at North Field. The only development proposed for the North Field is the North Field Lot for employee parking, which would have no effect on flight paths or procedures. See also Global Response B: Flight Paths and Procedures and Global Response D: Noise.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the

implementation of the Proposed Project. The commenter's statement regarding studies being conducted on Bay Farm in particular is acknowledged.

3. The noise abatement program at John Wayne Airport in Orange County, California was implemented prior to the passage of the Airport Noise and Capacity Act (ANCA). Due to ANCA, the Port cannot adopt new noise rules to reduce aircraft noise or restrict aircraft access at OAK. Only the FAA can enact operational restrictions on aircraft to reduce aircraft noise. See Global Response D: Noise.
4. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-560

Marcia Kolb

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-560

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G:

Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-561

Kedar Korde

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-562**Martine Kraus**

Dear Board of Commissioners and Officials - The jet noise from OAK airport departures and arrivals is already incessant and unbearable at this time. On many days, the air pollution from the jet engines is palpable. The expansion will further exacerbate the jet noise and pollution which already currently pose a serious threat to the health and well being of our communities and, in particular, those communities directly underneath the NextGen flight paths. With those serious concerns unaddressed for the current flight volume, I do not see how an expansion and increase in flight volume can be justified. Martine Kraus

Commenter P-564**Gary Krauss**

I strongly do not support expansion plans. There is no proven need to expand. Your impact study is flawed by not addressing all impacts including on the ground realities experienced by Bay Farm residences dealing with existing airport/runway status. Obviously it is slanted in flavor for who paid for study. This entire project is nothing more than a money grab. Looking at the details of your results shows a lot of numbers but does not address any of the previous research about the adverse impacts to people of airplane traffic over residential areas. The construction process and overall airport expansion would destroy the current quality of life on Bay Farm. Again I strongly oppose this expansion effort. I could enumerate our experiences over the previous 3 day weekend with airport repairs causing full activation of north runway but feel like that effort would fall in deaf ears. Suffice it to say it was very unpleasant and not healthy whether indoors or outside.

1 2

3

Response to Commenter P-564

1. The commenter's opposition to the Proposed Project is acknowledged. The Proposed Project would accommodate forecast market demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
3. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-565**Gary Krauss**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-566**Beth Krebs**

I'm concerned that in this era of extreme climate change, an airport expansion moves us further away from our goals of reduced CO2 emissions. We need to invest in low carbon alternatives, and flight is not among these. An expansion will also impact our community with worse air quality and more noise.

1

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Response to Commenter P-566

1. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Commenter P-568

Thomas Krysiak

Dear Ms Liang;

Is there a specific chapter in the DEIR explaining the impact of airport noise on long term health consequences as a result of disruptions to sleep.

I'm very curious about this topic because my family's sleep schedule has been occasionally disrupted by loud OAK cargo plane flights after midnight.

It's now commonly known that good sleep quality with few very loud disruptions is essential for good health. This research topic must be cited somewhere in the OAK DEIR noise section. Can you please reply and point this section out for me?

Thank you.

Response to Commenter P-568

1. The commenter's statement regarding nighttime noise is acknowledged. **Appendix M** of the EIR provides a Sleep Disturbance Study and a Supplemental Sleep Disturbance Memorandum associated with nighttime flights at OAK.

1

Commenter P-569**Thomas Krysiak**

Repeated noise events diminish our health and must be curtailed. The FAA must reinstate noise limits and show some concern for the health and safety of residents who live near airports. Let's push the carriers to use quieter engines, limit flight departures during night hours and flight paths that are further over the Bay away from our BFI homes.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-569

1. The commenter's statement regarding curtailing repeated noise events is acknowledged. The commenter's statement regarding FAA reinstating noise limits and push for quieter engines is acknowledged. Due to the Airport Noise and Capacity Act (ANCA), the Port cannot adopt new noise rules to reduce aircraft noise or restrict aircraft access at OAK. Only the FAA can enact operational restrictions on aircraft to reduce aircraft noise. See Global Response D: Noise.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a

discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter’s concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter’s statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-570

Thomas Krysiak

Thank you for pointing out the CEIR's appendices L&M for Noise Model Inputs and the Sleep Disturbance Analysis. My colleagues and I are currently studying this important information.

1

I participated in a recent OAK Expansion forum and would like to know if these two issues listed below are included in OAK's CEIR:

2

- 1) Were transportation alternatives such as AMTRAK and the upcoming CA High Speed Rail project juxtaposed against the OAK Expansion? One participant mentioned that an enormous amount of the OAK flights are within the state of California and wouldn't expanded rail service prove to be more energy efficient, less costly and less polluting than increasing jet aircraft traffic volume via the OAK expansion?

2) I've read that many of the airline companies are currently upgrading their fleets to highly energy efficient, less polluting jet aircraft engines that are also much quieter. One engineering participant mentioned that the technology for quieter jet aircraft engines has been available for several years now. Is it possible to demand that the participating OAK airlines use only quieter, less polluting technology as a condition of expanding OAK? If this aspect is included as part of the CEIR study, can you please point me to the section that addresses the possibility of allowing only the use of the latest jet aircraft engine technology?

3

Please include these inquiries as part of the public forum for the OAK Expansion. Thank you in advance for your responses.

4

Response to Commenter P-570

1. The commenter's statement regarding noise level inputs and the sleep disturbance analysis is acknowledged.
2. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
3. Due to the Airport Noise and Capacity Act (ANCA), the Port cannot adopt new noise rules to reduce aircraft noise or restrict aircraft access at OAK. Only the FAA can enact operational restrictions on aircraft to reduce aircraft noise. See Global Response D: Noise. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
4. The commenter's request to include their inquiries as comments on the Draft EIR is acknowledged.

Commenter P-571

Thomas Krysiak

Please include my name as an Alameda resident who also requests that the Port of Oakland extend the date to compile, assess and respond to questions from the local citizenry regarding the CEIR Expansion project for Oakland Airport. There are significant new concerns that are now emerging and delaying the final date to December 31, 2023 would allow newly enlisted technical experts to weigh in on the serious health and environmental impacts to Alameda.

1

Thank you for your consideration.

Response to Commenter P-571

1. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-572**Thomas Krysiak**

Repeated noise events diminish our health and must be curtailed. The FAA must reinstate noise limits and show some concern for the health and safety of residents who live near airports. Let's push the carriers to use quieter engines, limit flight departures during night hours and flight paths that are further over the Bay away from our BFI homes. The OAK expansion will exacerbate the existing high noise levels and the dangerous micro-particulates generated from additional airborne jet fuel that embeds deeply in lung tissue and are known to cause adverse health outcomes for residents of nearby airports. Disrupted sleep from nighttime airport noise has been proven to have negative health consequences and reduced longevity. We must push the Port of Oakland to further study the health consequences before undertaking this expansion project. High speed rail and an Amtrak expansion might just be built at the same time as the proposed expansion and this must be an element of study before approving the OAK expansion. Thank you.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

21. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

22. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

23. Aviation is hard to decarbonize and biofuels are not the answer.

24. It's too much noise. More Flights= More noise.

25. Sea level rise threatens shoreline development.

26. Labor rights are at stake.

27. Inequity: flying is an elite privilege with high costs for everyone else.

28. We have alternatives. Invest in Rail.

29. We have alternatives like remote business and conferencing.

30. We need to shift towards climate-just transportation.

Response to Commenter P-572

1. Due to the Airport Noise and Capacity Act (ANCA), the Port cannot adopt new noise rules to reduce aircraft noise or restrict aircraft access at OAK. Only the FAA can enact operational restrictions on aircraft to reduce aircraft noise. See Global Response D: Noise.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport

worker locations during incremental operations of the Proposed Project. For a discussion of noise, see Global Response D: Noise.

3. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
4. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
7. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
8. For a discussion of aircraft noise, see Global Response D: Noise.
9. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
10. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
11. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
12. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-573**MJ Kubala**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-576

Emma Kung

As a neighbor to the airport, I am deeply worried about an expansion. At the present, the noise and pollution my family is experiencing is already a huge health concern. Especially after the Nextgen pattern was put in place, the noise is nearly unbearable. My children's online classes and husband's conference call are constantly interrupted. We are awakened at all hours of the night with departing jets that are so loud, the walls shake. Both the inside and outside of our house is coated in black dust that returns in a few days time after cleaning. We have been told by the City Council of Alameda that the biggest problem facing the city of Alameda is climate change, and yet this expansion will further reduce green vegetation in exchange for hot pavement, increased car traffic creating hot emissions, and even more jets spewing hot emissions and pollution all over the neighborhood and polluting the bay.

1

2

3

Response to Commenter P-576

1. The commenter's statement regarding noise, pollution, and NextGen are acknowledged.
2. The commenter's statement regarding their house being coated in black dust is acknowledged.
3. The commenter's statement regarding climate change is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-577

Emma Kung

As a neighbor, I am opposed to the expansion, as the noise and pollution is already at a very high level, however I am wondering, will homeowners be provided new soundproof windows and other soundproofing remediation and air filtration systems?

1

Response to Commenter P-577

1. The commenter's opposition to the Proposed Project is acknowledged. The noise analysis in the EIR describes the changes in noise associated with the increase in aircraft operations that would occur with or without the implementation of the Proposed Project. The Port established the Oakland Airport-Community Noise Management Forum in 1998 (Noise Forum), to provide a committee comprised of elected officials and citizen representatives to address aircraft noise issues related to OAK. With a 20+ year history, this forum is now an important standing venue for communication between the Airport and at least six neighboring communities and

the county. With input from the Noise Forum, the noise management program has continuously improved with implementation of noise minimization measures, data capture, documentation, and communication tools. These measures and tools include voluntary “fly quiet” procedures for pilots, a noise monitoring system, a noise complaint reporting system, web-based aircraft report dashboards, community advisories, and continued advocacy on behalf of the community regarding FAA management of flight paths.

Commenter P-578

Emma Kung

The noise and air pollution in Alameda from the air is already so bad. We can no longer carry on conversations without constant interruptions from airplane noise so bad it shakes the walls. Our house is coated inside with black dust I cannot keep up with cleaning. City of Alameda has told us climate change is the greatest threat our city is currently facing. Greatly increasing flights and paving over even more plant life is the exact opposite strategy for reducing warming and pollution in our city.

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

12

Response to Commenter P-578

1. The commenter’s statement regarding noise and air pollution is acknowledged.
2. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at

OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. **Sections 3.4** of the EIR provides an analysis of the biological resource impacts that would occur as a result of the implementation of the Proposed Project.

3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. Commenter P-583

Susanna and Lyle La Faver

Use of North Field rattles my home and sets off car alarms. My asthma is acerbated by air quality. PLEASE, no expansion. 1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons: 2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 3
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 4
- Aviation is hard to decarbonize and biofuels are not the answer. 5
- It's too much noise. More Flights= More noise. 6
- Sea level rise threatens shoreline development. 7
- Labor rights are at stake. 8
- Inequity: flying is an elite privilege with high costs for everyone else. 9

Response to Commenter P-583

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-584**Laakea Laano**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-587

Danny Lam

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity.

With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

1

6

7

Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

8

Response to Commenter P-587

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.

8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-588**Joanne Lam**

Steve Larkin

Personnel that make decisions to route jet traffic on alternate runways are not acting responsibly. If they could consider homeowners on Bay Farm there may be a chance to subsist with increased traffic but based on the sheer arrogance displayed recently with increased noise over a three day period this is highly unlikely.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-593

1. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo

areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-594

Holly Larsen

As a Bay Farm Island resident, I worry about noise and climate impacts. Water rise is a huge concern. Please reconsider this project.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-594

1. **Section 3.7 and 3.11** of the EIR provide an analysis of greenhouse gas and noise impacts, respectively, that would occur as a result of the implementation of the Proposed Project. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Commenter P-598**Dan Lazzetti**

I live on Bay Farm Island and can attest to the noise generated by the airport and planes taking off. The airport does not enforce the existing flight path guidelines that are supposed to minimize noise for residents of our community. Adding more planes means this will get worse. Fix the current problems before expanding.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-600**Donna Learn**

As a 61-year resident of the East Bay: 10-year Harbor Bay Alameda resident, and 51-year resident of San Lorenzo, I have concerns regarding the current plans for the Oakland Modernization expansion project. Here is a list of my concerns.

-The Port of Oakland's stance is they do not regulate jet aircraft usage or carbon fuel usage therefore they claim to have no regulatory role or responsibility. The lack of regulatory authority over these issues is a concern. I believe the Port of Oakland should be concerned about their role in contributing to global warming and noise pollution. They want to reap the financial benefits from expansion, but do not want to acknowledge their role in enabling and increasing the negative environmental impact created by their authority in expansion of the airport.

-The current study fails to take into account the impact of noise and air pollution upon the Chinese Christian School located on North Loop Road.
 -The current study fails to take into account impact of noise and air pollution upon the Harbor Bay KindeCare and Bright Horizons Preschools.
 -The study lists two public schools only for Harbor Bay. Private schools and adult care facilities should be included.

-The BAAQMD monitors for air quality are not located on Bay Farm Island or Harbor Bay Island. Further study for air quality closer to the airport and surrounding neighborhoods near North Loop road is needed.
 -Further carbon particulate studies are needed for how black carbon soot is impacting the surrounding homes on Harbor Bay and Bay Farm Island. Many roofs and ground areas are often covered with black carbon soot. Although such studies are not required. I believe a study should be conducted since evidence suggests the community is being impacted by black carbon and this does impact the health of residents.

1

2

3

-The current noise monitors are not located close to the Harbor Bay Housing communities. Intermittent noise exceeding standards for periods of time lasting minutes to seconds does not take into account the long-term impact upon the citizens with daily exposure to this noise. FedEx operations late at night 2am to 3am that reposition 8 to 13 aircraft the first week of the month in quick processional flights is not considered. Idling aircraft noise is not measured. The noise criteria is not reasonable and lacks data in regard to long term noise exposure to intermittent noise, which violates and exceeds moderate noise levels. Further studies are needed. A study measuring the hearing loss for residents is requested to document the long-term effects upon the surrounding communities. Although such studies are not required by current law, such studies are needed and ethically should be considered.

4

-The Port of Oakland should not be allowed to fill-in the San Francisco Bay or estuaries for Terminal C alternative plan, which is not reasonable and would have a huge impact upon the surrounding wildlife.

5

-The Port of Oakland allows the sales of fuels at the airport site, and most likely takes profits from these activities. The Port of Oakland should require blended fuels only to reduce the carbon footprint from aircraft activity.

6

-The Port of Oakland should not increase parking surface areas, but decrease parking surface lots to encourage citizens to use shuttles, Bart and other public transit. This would assist in lowering the carbon footprint -The Port of Oakland should be required to become a LEED partner, by increasing the use of solar at the airport by placing solar on roofs and covered walkways.

7

8

-The Port of Oakland should relocate parking to the Oakland Coliseum existing South lots and run shuttles to the airport facility.

9

-The Port of Oakland should become an environmental leader and example of what a modern airport can be. Lead in pushing Boeing and others to create a lower carbon footprint. Lead to work with the oil industry to provide better blended or carbon neutral energy sources. Lead in promoting alternative fuels.

10

Response to Commenter P-600

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.
2. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR.
4. For a discussion on the methodology used for the noise analysis, see Global Response D: Noise. Also see response to Comment #2 of this letter.
5. **Chapter 4** of the EIR provides a description of other alternatives that were reviewed and presents the reasons each of these other alternatives was either brought forward for or screened (eliminated) from further study. The purpose of the alternatives analysis is to explore ways that the objectives of the Proposed Project could be attained while reducing or avoiding significant environmental impacts of the project as proposed. This process is intended to foster informed decision-making in the environmental process. The Terminal Development Area C alternative was screened from further evaluation and is not included as the Proposed Project.
6. **Section 3.7.3.1** of the EIR indicates that one of the initiatives to reduce GHG emissions at OAK is to continue engaging with airlines and regional partners to promote increased use of Sustainable Aviation Fuel (SAF) as a replacement for conventional jet fuel. Although the Port does not have the authority to control what types of aviation fuel are used by airlines operating at OAK, the Port will continue to engage with other entities to promote SAF use at OAK as one of many initiatives available to reduce GHG emissions. See also Global Response H: Alternative Fuels.
7. OAK provides infrastructure and encourages alternate modes of transportation such as bike paths leading to the airport, bike parking, and the BART connector.
8. **Section 3.7.3.1** of the EIR identifies that the Port is participating in the Airports Council International (ACI) Airport Carbon Accreditation (ACA) Program and has achieved Level 1 Accreditation: Mapping. The Port subsequently achieved Level 2 Accreditation: Reduction in 2023 and Level 3 Accreditation: Optimization in 2024. As part of the accreditation, the Port developed and signed Carbon Reduction Statements with a goal of 50 percent emission reduction by 2030 and 100 percent zero emissions by 2040 from airport-owned and operated operations. The Port is committed to achieving subsequent levels of accreditation, which would require the Port to track GHG emissions and demonstrate further emissions reductions.
9. See response to Comment #7 of this letter.
10. See response to Comment #8 of this letter. Also see Global Response G: Greenhouse Gas and Climate Change and Global Response H: Alternative Fuels.

Commenter P-601**Donna Learn**

Response to Commenter P-601

1. The commenter's statement regarding the Port of Oakland's concern with global warming and noise pollution is acknowledged.
2. The commenter's statement regarding health effects is acknowledged. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR.
3. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
4. See response to Comment #3 of this letter.
5. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
6. The commenter's statement regarding blended fuels is acknowledged. Also see Global Response H: Alternative Fuels.
7. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.

8. The commenter's statement regarding the Port of Oakland becoming an LEED partner is acknowledged. **Section 3.7.3.1** of the EIR identifies that the Port is participating in the Airports Council International (ACI) Airport Carbon Accreditation (ACA) Program and has achieved Level 1 Accreditation: Mapping. The Port subsequently achieved Level 2 Accreditation: Reduction in 2023 and Level 3 Accreditation: Optimization in 2024. As part of the accreditation, the Port developed and signed Carbon Reduction Statements with a goal of 50 percent emission reduction by 2030 and 100 percent zero emissions by 2040 from airport-owned and operated operations. The Port is committed to achieving subsequent levels of accreditation, which would require the Port to track GHG emissions and demonstrate further emissions reductions.
9. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. See response to Comment #8 of this letter. Also see Global Response G: Greenhouse Gas and Climate Change and Global Response H: Alternative Fuels.

Commenter P-602**Margherite Lebbert**

The airport does not adhere to the existing parameters and limits of the CLASS settlement, which was designed to take the airport's surrounding community into account. This will negatively impact the surrounding cities and neighborhoods, but the wildlife along the shoreline, such as migrating and nesting birds. The airport also displays wanton disregard for the existing CLASS settlement by not utilizing over-the-bay take offs and landings and respecting noise levels.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-602

1. The Port participates in resiliency working groups with community members, such as the Oakland Alameda Adaptation Committee, to discuss flood control and flooding issues. Learning from the lived experience of residents, the Port has started planning and implementing specific adaptation projects. Having worked through the multi-year process of design and construction, the Port completed improvements to the perimeter dike in 2022 to protect the Airport from storm inundation and rising sea levels. The Port enhanced the stability of the Airport dike and raised its height by an additional 12 inches beyond the Federal Emergency Management Agency's (FEMA) 100-year flood standards to secure the Airport against flooding and to prepare for the effects of sea level rise from climate change. As a demonstration of the Port's commitment to engaging with the community, the Port will include the development of a Community Benefits Agreement (CBA) as part of the Proposed Project. See also Global Response E: Environmental Justice and Community Engagement

The Port does not have the authority to modify or change aircraft flight paths. See also Global Response B: Flight Paths and Procedures.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-603**Fred Lebe**

I oppose the Oakland Airport expansion.	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
31. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
32. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
33. Aviation is hard to decarbonize and biofuels are not the answer.	5
34. It's too much noise. More Flights= More noise.	6
35. Sea level rise threatens shoreline development.	7
36. Labor rights are at stake.	8
37. Inequity: flying is an elite privilege with high costs for everyone else.	9
38. We have alternatives. Invest in Rail.	10
39. We have alternatives like remote business and conferencing.	
40. We need to shift towards climate-just transportation.	11

Response to Commenter P-603

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-604**A.R. Lee**

1. The noise is already unacceptable from current flights--Fed Ex, commercial, & private. Planes are flying over homes instead of the water; there are too many between 10 pm and 6 am, and the cargo planes especially don't respect the flight paths. When planes depart from North Field and flight directly over Bay Farm homes, it's actually impossible to have a conversation on the ground. Sometimes the noise sets off car alarms and/or causes detectable vibrations.

2. If indeed the demand is that high for more Bay Area flights--even with three international airports surrounding the water, then move eastward for an added location--where there is more unpopulated land AND less densely populated cities. Other cities have done that (Denver, for example) and are still thriving places.

3. If there is money to build more terminals to have more flights, there are other ways to spend it. Plenty could be done to update and upgrade the current OAK. Design a more efficient process for drop-offs and pick-ups; make connecting to the BART extension easier for those who are disabled. Hire more TSA agents so that long lines don't back up with only two agents on duty to process passengers. Create some waiting areas that are truly comfortable as well as utilitarian. Improve signage so that passengers aren't searching for information and direction and/or have more staff cruising to assist them.

3

4. I find it hard to believe that studies do NOT show harmful effects of not only noise pollution, but also air and water pollution. We have a beautiful area here in Alameda, with Bay Farm offering shoreline walks and parks. But lately it's difficult to enjoy them because of the frequency and proximity of the planes. Visitors have commented on this as being 'too bad' given the price we pay to live here. What about property values--with more plane noise and pollution as a constant state, realtors and homeowners should be concerned about their huge investments being devalued.

4

5. The windows offered only mitigate the noise slightly. Even with all windows and doors shut, planes often don't seem to follow the flight paths that do NOT proceed over homes, which if I understand the maps correctly, means they are NOT staying within the property lines of Port of Oakland ownership. The many reports we make to the phone line provided seem to fall into black holes because nothing changes to ameliorate the errors. How would INCREASING the number of planes' departures make that particular issue better. I'm not sure exactly who is responsible for insuring that pilots actually DO follow a 'legal' flight path: is it the airport management itself? The Port of Oakland entity? But for years all possible levels of management have been told about this issue and nothing is done.

5

6. I have to also say that it is frustrating to see all this planning has been done behind the doors for so long before you have made plans public. It seems almost intentional that the people most affected by this proposed change--residents and neighbors to the site (and not the pockets of the money folks)--are the last to know about it, making it more difficult for us to learn more about it and present our opinions and concerns. We're talking about our quality of life being threatened.

6

Thank you for considering my comments. I hope that you can find a different way to welcome more people to the Bay Area without making current residents' daily lives noisier, dirtier, and more congested.

7

Response to Commenter P-604

1. The commenter's statement regarding nighttime flights and noise is acknowledged. A Sleep Disturbance Analysis is included in **Appendix M** of the EIR. For a discussion of noise, see Global Response D: Noise. For a discussion of flight paths, see Global Response B: Flight Paths and Procedures.
2. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
3. The commenter's statement regarding recommendations to upgrade and update OAK is acknowledged.

4. **Sections 3.3, 3.9, 3.11** of the EIR discuss air quality, hydrology, and noise impacts, respectively. No significant air quality, water quality, or noise impacts would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

5. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter’s statement regarding frustration over the Proposed Project’s planning process is acknowledged. **Chapter 6** of the EIR provides information regarding public outreach associated with the EIR. See also Global Response E: Environmental Justice and Community Outreach.
7. The commenter’s opposition to the Proposed Project is acknowledged.

Commenter P-605

Bobby Lee

Has interior configuration of the new passenger terminal been determined? e.g. Gate layout, passenger amenities, etc. If not, what part of the process will this be determined and public comment taken?

1

Response to Commenter P-605

1. The square footage identified in the Proposed Project is based on sizing of facilities using industry standards. Specific areas would be addressed during future detailed design. The Port is assessing the potential environmental effects of the Proposed Project and a determination as to whether or not to approve the Proposed Project will not be made until after certification of the Final EIR.

Commenter P-606

Daniel Lee

I oppose the Oakland Airport expansion. For years the Port of Oakland had worked with our community. Why can’t Oakland Airport continue working with the surrounding communities Alameda & San Leandro?

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-606

1. The commenter’s opposition to the Proposed Project is acknowledged. The Port has included the City of Alameda and the City of San Leandro in their public outreach coordination. **Chapter 6** of the EIR provides information regarding public outreach associated with the EIR. See also Global Response E: Environmental Justice and Community Outreach.
2. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-607**Judy Lee**

I am raising two small children and I can't even watch a movie with them without hearing planes fly over us day and night. This needs to stop.

1

Response to Commenter P-607

1. The commenter's statement regarding aircraft noise day and night is acknowledged. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-608**Kyongri Lee**

I am opposed to adding a new terminal. My once-peaceful neighborhood now suffers from constant airplane noise and pollution already and I am frequently awakened from my sleep from the noise and cannot enjoy peace and quiet outside in my own backyard. Divert the flight path from Montclair/Oakland Hills and do not increase terminals and/or gates. If you think doing such is a good idea, put the flight path over your own neighborhood.

1

Response to Commenter P-608

1. The commenter's opposition to the Proposed Project is acknowledged. The commenter's statement regarding frequently being awakened from sleep because of noise is acknowledged. A Sleep Disturbance Analysis is included in **Appendix M** of the EIR. For a discussion of noise, see Global Response D: Noise. For a discussion of flight paths, see Global Response B: Flight Paths and Procedures.

Commenter P-609**Nancy Lee**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Cate Leger

We are in a climate crisis. Expanding flights at the Oakland airport is exactly the wrong direction. 1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons: 2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 3
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 4
- Aviation is hard to decarbonize and biofuels are not the answer. 5
- It's too much noise. More Flights= More noise. 6
- Sea level rise threatens shoreline development. 7
- Labor rights are at stake. 8
- Inequity: flying is an elite privilege with high costs for everyone else. 9
- We have alternatives. Invest in Rail. 10
- We have alternatives like remote business and conferencing. 11
- We need to shift towards climate-just transportation. 11

Response to Commenter P-612

1. The commenter's statement regarding being in a climate crisis is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-613**Cate Leger**

In light of the climate crisis, the country should be expanding rail service not airports. In addition, I think the east bay already has its share of air pollution. We don't need more for more planes flying over.

1

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

3

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

5

• Aviation is hard to decarbonize and biofuels are not the answer.	6
• It's too much noise. More Flights= More noise.	7
• Sea level rise threatens shoreline development.	8
• Labor rights are at stake.	9
• Inequity: flying is an elite privilege with high costs for everyone else.	10
• We have alternatives. Invest in Rail.	11
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	12

Response to Commenter P-613

1. The commenter's statement regarding how the country should expand rail service instead of airports is acknowledged. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions would occur whether or not the Proposed Project is implemented.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical

infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-614

Kevin Lei

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.

8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Response to Commenter P-614

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-615**Aaron Lemmon**

As an Alameda County homeowner resident within Oakland's Jack London Square, I am writing to wholeheartedly endorse this proposal to increase OAK gates from 29 to 45 with minimal environmental and related impacts. Thank you for providing such a detailed analysis of the research effort which was entirely satisfactory during my review. My only request is that a specific effort be made to diversify additional gates at OAK preferentially to Southwest Airlines competitors to increase ticket pricing aggressiveness while growing the total number of net new destinations available for direct flights. I also hope ample space will be set aside within the new layout for the specific purpose of setting up on-site airline lounge facilities (Delta Sky Club, Chase Sapphire/Capital One/American Express, etc.) for the benefit of passengers pre-departure to strengthen OAK value proposition as a formidable alternative to SFO.

1

2

3

Response to Commenter P-615

1. The commenter's support for the Proposed Project is acknowledged.
2. The commenter's statement regarding a request to diversify additional gates at OAK is acknowledged. The Port's airport marketing group continuously works to encourage competition and diversity of carrier routes. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.
3. The commenter's statement regarding airline lounge facilities is acknowledged. The square footage identified in the Proposed Project is based on sizing of facilities using industry standards. Specific areas would be addressed during future detailed design.

Commenter P-616**Ellen Leng**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-617**Kate Lenhardt**

I live very close to the Oakland Airport. The noise and pollution from the planes flying near my home already significantly impact my health and well-being. It's especially bad when planes reverse their landing direction and when planes use the runways on the North Field.

1

ALL flights must use the South Field and ALL flight paths must be over the bay, reducing flights over homes.

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Response to Commenter P-617

1. The commenter's statement regarding noise and air pollution is acknowledged. Noise impacts of the Proposed Project were analyzed in **Section 3.11** of the EIR. The future noise contours provided in **Section 3.11** are based on the continued use of these existing flight paths. No changes in flight paths or flight procedures would occur as a result of the Proposed Project. Further, the Proposed Project does not include any airfield changes at North Field. The only development proposed for the North Field is the North Field Lot for employee parking, which would have no effect on flight paths or procedures. See also Global Response B: Flight Paths and Procedures and Global Response D: Noise.
2. See Response to Comment #1 of this letter.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-618**Kate Lenhardt**

I live three miles from the Oakland airport. I encourage the Port to protect the health and well-being of my community and reject this proposal.

1

The Draft EIR does not fully evaluate the noise impacts on surrounding communities from more flights overhead. Even today, with the current number of flights, my health and well-being are greatly impacted.. I cannot sleep thoroughly when my windows are open, which I need to do to cool my home at night. Most homes in my community do not have the luxury of air conditioning and there are many, many homes under the flight paths.. This area is crowded with multifamily homes providing a more affordable housing option to those of us who are less well off.

2

I cannot hear normal conversation outdoors.. I cannot hear my TV or normal conversation with patio door or windows open, again, in order to cool my home. I have only been able to hear the TV with my patio door closed since installing a double-pane patio door, an option not everyone can afford.

The roar of jet planes overhead is distressing.. You might imagine that we get used to it, but recent research has shown that though we might get used to it psychologically, we can never get used to it physiologically.

Our body is flooded with cortisol, putting us in a state of alarm, every time a plane roars overhead, shaving years off of our lives. It's become worse since more flight paths are directly over our homes rather than directly over the Bay.

I encourage the Port to protect the health and well-being of my community and reject this project.. Thank you for your time and attention.

3

Response to Commenter P-618

1. The commenter's statement regarding protecting the community's health and well-being by rejecting the Proposed Project is acknowledged.
2. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of the implementation of the Proposed Project. For additional discussion on noise, see Global Response D: Noise. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
3. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-619

Catherine Leong

I share many concerns with my fellow Alameda neighbors who strongly oppose the proposed expansion of Oakland Airport.

1

This proposed project of 900,000 square feet of new terminal space will most certainly have profound negative impacts on the quality of life for all residents and schools in our community. The Port's DEIR is inadequate and greatly flawed with regards to the true impacts of adding to this airport, creating a great deal of concern about exactly what the Port has in mind.

2

The Port's DIER specifically states the following: (I note only a couple of points but there is much more to be concerned with)

3

- "The majority of ROG and NOX emissions result from aircraft operations, which the Port does not have the authority to regulate". With all due respect, the Port does have the authority to regulate by not building this new terminal, therefore eliminating the need for additional flights.

- "No significant impact but adding the new terminal". How is this possible? with up to 24million + additional passengers projected, all the vehicle trips to OAK, the additional airline trips, etc. The noise pollution, the air pollution alone is beyond significant.

4

In my lay terms and from my personal experience living close to OAK, I share that with an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Alameda's Bay Farm Island and Alameda's Main Island, would mean louder, more frequent noise disturbances as well as jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values negatively impacting the tax income of Alameda County, the City of Alameda and the State of California, severe environmental and wildlife concerns, as well as increased vehicular traffic & pollution.

5

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents,

6

I am asking that the Port of Oakland conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurately estimated noise and air pollution impacts on the residents most impacted by this expansion.

7

Emission calculations are not included in technical appendices nor elsewhere for we, the public, to review. There is no explanation as to how construction criteria pollutants, operational criteria pollutants, GHG and toxic air contaminant (TAC) emission calculations were derived. No backup documentation, equipment assumptions, aircraft assumptions, inputs, emission factors or methodology is included; thereby rendering meaningful third-party review impossible. As a result, the DIER document fails to adequately disclose to the public, potential impacts associated with air pollution exposure as required by CEQA.

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.).

8

In addition to the aforementioned concerns, the Bay Area News Group article from October 13, 2023 states the Oakland Airport is suffering from a decline in the number of air travelers it handled for each of the last 3 months when compared to the same months in 2022, down 10.1% in August 2023, down 7.1% in July and down 5.8% in June. This weakening trend (down 15% from 2019). This expansion comes at a time that the world is urging fewer flights as to lessen impact on our global existence. Emissions from aviation are a significant contributor to climate change. Non-CO2 climate impacts mean aviation accounts for 3.5% of global warming. Aviation accounts for around 2.5% of global CO2 emissions, but its overall contribution to climate change is higher. This is because air travel does not only emit CO2: it affects the climate in a number of more complex ways. Aviation, i.e. air transport, accounts for about 12 percent of total transport emissions. Why go backwards, especially in "green" California?

9

Between this downward trend and given what we know about the Climate Crisis and the resulting threat sea level rise poses to our very community, no industry as dependent upon the consumption of fossil fuels as the air travel industry should be allowed to expand operations in our backyard and on our watch for the betterment of the global community.

All in all, the Port has failed to explain the true impacts of this proposed development and show that proper due diligence has been done and the air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

10

This is a tremendous concern as our community's lifestyle would be negatively impacted and permanently hindered with this expansion. Please do not approve the expansion proposal.

Response to Commenter P-619

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 3** of the EIR discusses the existing conditions and potential environmental impacts that may result from the Proposed Project.
3. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions would occur whether or not the Proposed Project is implemented.
4. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is

intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service.

Sections 3.4 and 3.13 of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK.

5. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.
7. Detailed air quality reports in **Appendix F** of the EIR. The EIR contains detailed analyses that identifies the impacts of the Proposed Project and identifies measures to reduce the magnitude of impacts to a less than significant level.
8. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
9. For a discussion on forecast airport activity, see Global Response A: Aviation Forecast.
10. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-620

Catherine Leong

Even beyond the potential for significant noise impacts, property values plummeting, given all we know about our global climate crisis no industry as dependent upon the consumption of fossil fuels as is the air travel industry should be allowed to expand operations in our backyard and on our watch.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-620

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-621**Cathy Leong**

As a neighbor, why were we not informed of these meetings?
until now I had no clue...this is just not right
please advise.

1

PS yes I just signed up to receive your information moving forward.

Response to Commenter P-621

1. **Chapter 6** of the EIR provides information regarding public outreach associated with the publication of the EIR. Notice of the times and location(s) were published prior to the public meetings via newspaper advertisements, press releases, postcards, eblasts, social media posts, and on-site Airport advertisements

The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-622**Kevin M. Leong**

The Port of Oakland should modify their plans for the "Oakland Airport Expansion" project to impact only Oakland residents, not Alameda residents.

1

Response to Commenter P-622

1. The commenter's statement regarding modifying the plans for the Proposed Project to impact only Oakland residents is acknowledged.

Commenter P-623**Sheila Lewellyn**

The noise and air pollution offsets any extra travel benefit from such an expansion. It is not worth it to me.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 2

Commenter P-625**Margie Lewis**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.

4. It's too much noise. More Flights= More noise.	5
5. Sea level rise threatens shoreline development.	6
6. Labor rights are at stake.	7
7. Inequity: flying is an elite privilege with high costs for everyone else.	8
8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Response to Commenter P-625

23. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
24. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
25. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
26. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
27. For a discussion of aircraft noise, see Global Response D: Noise.
28. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
29. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
30. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
31. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of

aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

32. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-626

Melynda Li

Recently more flights are flying right on top of my house. It significantly increased more pollution and affected our quality of air in the neighborhood. Also, the noise really affected my work from home. Most importantly, these airplanes fly in a low elevation and directly affect our enjoyment of our home and neighborhood. Stop more flights above our Bay Farm Island.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
 2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
 3. Aviation is hard to decarbonize and biofuels are not the answer.
 4. It's too much noise. More Flights= More noise.
 5. Sea level rise threatens shoreline development.
 6. Labor rights are at stake.
 7. Inequity: flying is an elite privilege with high costs for everyone else.
 8. We have alternatives. Invest in Rail.
 9. We have alternatives like remote business and conferencing.
 10. We need to shift towards climate-just transportation.

Response to Commenter P-626

1. The commenter's statements regarding more flights and increase pollution and noise are acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in

aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.

I oppose the expansion of OAK as it will add more pollution over Alameda. What's going to be done to minimize noise and air pollution?	1	2
--	---	---

Response to Commenter P-629

1. The commenter’s opposition to the Proposed Project is acknowledged.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR. See also Global Response D: Noise.

Commenter P-630**Benjamin Lin**

I'd like to preface that the airline industry makes up \$1.25 trillion in the United States and this is important because many jobs depend on it. However, expanding the airline industry would only increase the damages when it eventually needs to go. Additionally, it is

1

imperative that we approach the expansion of the Oakland airport with unwavering caution. A surge in aircraft contributes to the escalating deterioration of global air quality. In the face of recurring wildfires and catastrophic natural events it becomes crucial to undertake preventative measures like curbing potential sources of pollutants. Let's stand for our commitment to the future by making thoughtful decisions today. Thank you.

2

Response to Commenter P-630

1. The commenter's statement regarding the economics of the airline industry is acknowledged.
2. The commenter's statement regarding the deterioration of global air quality is acknowledged.

Commenter P-631**Christopher Lish**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

Meijing Liu

We are one of the residents of Bay Farm island. The current OAK airport has brought a lot of aircraft noise to my neighborhood already, and it is disturbing to know that OAK is planning on adding another terminal which would result in more aircraft noise. The current noise is impacting our daily life as we work from home. And it also affects our sleep when we leave the windows open during summer. Sometimes the air traffic is so busy that the noise occurs every 2 to 5 minutes, and that is unbearable and unacceptable.

What is the Port of Oakland doing to mitigate and minimize the amount of noise this new terminal shall bring? Thank you!

1

Response to Commenter P-633

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. Commenter P-636
Charlie Lloyd

I've been reading the draft EIR for the OAK expansion as I prepare to comment on it. I'd like to understand two specific points in it.

1.

The report mentions that the Port does not have the authority to mitigate GHG emissions associated with aircraft operations. **Question 1:** *Whose authority does aircraft operations GHG emissions mitigation fall within as regards the Proposed Project?*

1

2.

The aviation demand model appears to assume that air travel is completely inelastic. For example, on 3.7-12 we read (with omissions for clarity):

Aircraft emissions [...] would occur [...] regardless of permitting and construction of the Proposed Project.

And on 3.7-19:

These GHG emissions would result from projected demand and would occur whether the Proposed Project is constructed or not. The increase in emissions is driven by projected increases in aircraft operations at the Airport, as discussed in Chapter 2.

If I understand correctly, this is an assumption that aviation use is unconditional on the availability and convenience of aviation. **Question 2:** *Where can I find this assumption of inelasticity justified?*

1

I'd appreciate a response in time to make a comment that is informed by the answers to both questions.

3

Response to Commenter P-636

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

- 2 • Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- 3 • Aviation is hard to decarbonize and biofuels are not the answer.
- 4 • It's too much noise. More Flights= More noise.
- 5 • Sea level rise threatens shoreline development.
- 6 • Labor rights are at stake.
- 7 • Inequity: flying is an elite privilege with high costs for everyone else.
- 8 • We have alternatives. Invest in Rail.
- 9 • We have alternatives like remote business and conferencing.
- 10 • We need to shift towards climate-just transportation.

Response to Commenter P-637

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-638**Henry Long**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.

• It's too much noise. More Flights= More noise.	5
• Sea level rise threatens shoreline development.	6
• Labor rights are at stake.	7
• Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	10

Response to Commenter P-638

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of

aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-640**Kristen Loomis**

I realize this request is shocking, but the climate crisis is truly upon us, and we need to scrutinize everything we do, and make the decisions that will promote a livable future. We need fewer planes; they are now a benefit with serious consequences, and we need to cut back.

1

Commenter P-644**Patty Lopez**

I am very concerned about the impact this will have on the physical & mental health of myself/others living in the vicinity of the Oakland Airport. I'm also concerned about the impact it will have on our environment & global warming. Lastly, but not least, I am also concerned about the noise it will create. It is already disruptive to my sleep & quality of life. Adding an expansion would be even more disruptive. I Oppose the expansion.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

21. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

22. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

23. Aviation is hard to decarbonize and biofuels are not the answer.

Response to Commenter P-644

1. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project.
2. **Chapter 3** of the EIR describes the potential environmental impacts that could occur as a result of the implementation of the Proposed Project. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. The commenter's statement regarding noise disrupting their sleep and quality of life is acknowledged. A sleep disturbance analysis is included in **Appendix M**.

The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

4. The commenter's opposition to the Proposed Project is acknowledged.
5. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
8. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
9. For a discussion of aircraft noise, see Global Response D: Noise.
10. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

11. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.

14. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-645
Rosalinda Lorenzo

So I came here along with Junior and I live nearby here in Oakland near to the airport.. I work as a cleaning the cabins.

1

So regarding to this expansion I have a child and he's afflicted with asthma and I do believe that through the expansion there's going to be an increment on pollution and this will be effect equally both children and the elderly and this is much worse because it's affecting our children who happen to be our future.. As I just said I work in the cleaning and for us as workers we need an increment in our salaries as well as protection to our health.. Please support us we are requesting. Thank you.

Response to Commenter P-645

1. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. See also Global Response F: Human Health Risk Assessment. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.

Commenter P-646**Bart Lounsbury**

As a resident of North Oakland (under several FAA NextGen airplane highways) and citizen worried about climate change, I have very significant concerns with this proposal's effects on the environment at large and on residents like me, who must bear a considerable burden of air and noise pollution from airport activities. The Port has also advanced no particular justification for this expansion other than bureaucratic momentum that pre-dates the pandemic.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.
- We have alternatives. Invest in Rail.
- We have alternatives like remote business and conferencing.
- We need to shift towards climate-just transportation.

Response to Commenter P-646

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. - We need to shift towards climate-just transportation. 10

Response to Commenter P-648

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical

infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-649

Julie Lowe

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.

8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Response to Commenter P-649

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. Commenter P-650**Yorkman Lowe**

we found this discussion very interesting, and will be sure to watch it Aug 30.

1

Yorkman Lowe and Irene Westler

it was very well done and professional. we live in Emeryville and Piedmont. this project may affect our homes.

Response to Commenter P-650

1. The commenter's statement regarding participation in the public meetings is acknowledged.

Commenter P-651**Connie Lu**

I live in Bayfarm where the planes flies right above my home. I am not happy with the expansion program and rejecting to this unless the Oakland Airport agrees to pay for noise reduction program by upgrading the resident of Bayfarm windows to ensure noise will be reduced especially at night when we are sleeping.

1

I want Oakland Airport to pay for triple panes windows to all residents in Bayfarm.

When SFO expanded their terminal with their renovation program, they had this triple pane options and subsidized program for the surrounding neighbors who was affected by the noise.

Oakland needs to have this as well for residents who will be affected by the noise. We are already having to deal with the daily noise of the planes across our heads. With the expansion, the noise will only worsen.

Response to Commenter P-651

1. The commenter's statement regarding noise and opposition to the Proposed Project is acknowledged. The commenter's statement regarding perceived impacts of the Proposed Project is acknowledged. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

Commenter P-652**Joyce Luh**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

Commenter P-653
Tiffany Luk-Hirai

As someone who was born and raised here, and have spent 30+ years on Bay Farm, it saddens me to think of all the pollution and see how much more noise and disturbance from the airport we get. We have upgraded our windows and still I wake at 5 AM to the loud airplanes overhead. In addition, learning all the potential health affects the constant airplanes may have, it's sad to think I may be indirectly hurting my 5 year old twins living in such a wonderful neighborhood I've always called home. We do NOT want this expansion!

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

31. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
32. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
33. Aviation is hard to decarbonize and biofuels are not the answer.
34. It's too much noise. More Flights= More noise.

Commenter P-654**Jeff Luntzel**

I've been around the aerospace industry -- Do you mind me speaking German, sprechen zi Deutsch? Anyways, I was an Air Force brat okay.· I've lived in Tripoli, Libya for three years in the 60's. I remember when Kennedy was assassinated..· I've been -- my dad served in World War 2, Korea, and Vietnam.· My uncle, his younger brother, Don Luntzel, worked for Lockheed Space and Missile for over 40 years..· I know what technology can do and it does good okay?· Why don't we all move to Lancaster, Pennsylvania and become Amish and buy a horse and carriage if you want to go back in time and for the NIMBYs here that "Not in my backyard," Bay Farm in Alameda, that's the only place that's close to the flight path..· Within ten years every airplane, commercial airplane, will be electric, there will be no pollution, so what are you worried about people?

And as far as sea level, addressing you Peter, sea level problems, what do they do in Holland?· They build dikes, okay?· Solved..· Federal money, State money, all kinds of money if this is true..· I haven't made a decision on whether climate change -- you see, every year it's different. California never has one year-to-year that is the same..· That's what we do in -- I lived in a Mediterranean climate in North Africa when I was nine years old, attacked by Muslims, almost killed, and the Sahara Desert we had the highest temperature ever recorded in the world ten miles from where I lived in Libya, 129 in the shade..· Now they have a higher temperature -- this was in 1910.

You see there is no climate normal..· All we can do is average things but anyways I'll make this cut to the case..· Okay, technology, I love Oakland Airport..· I live in Sonoma County now, Petaluma, and I love Oakland Airport..· I don't have to go through San Francisco down 19th Avenue and spend more gasoline –

Response to Commenter P-654

1. The commenter's statement regarding technology, flight paths, climate change, and sea level rise is acknowledged.
2. The commenter's statement regarding there being no climate normal and loving Oakland Airport is acknowledged.

Commenter P-655**Christopher Lutz**

We all need to reduce our fossil fuel consumption including flying less. Expansion of the Oakland Airport is a step in the wrong direction given the all the climate change dangers.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

Commenter P-658**JoAnn Ma**

I strongly oppose expanding of the oakland airport due to air, noise and fuel pollution. As a household with asthmatic and ADHD kids, it is difficult to manage the noises and pollutants as they are now. I cannot imagine what level of harm will bring to our family if more airplanes flying over our heads.

Running jet engines even when they are taxiing are proven to severely impact the health of the residents situating within 6 miles from the airport.

This potential expansion will not only our health but also the value of our homes due to all the additional hazards.

Therefore I strongly oppose this plan.

1

Response to Commenter P-658

1. As part of the air quality analysis included in **Section 3.3** of the \EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of noise, see Global Response D: Noise.
2. The commenter's statement opposition to the Proposed Project is acknowledged.

Commenter P-659**Sophia Mac**

I'm in eleventh grade and a member of "Youth Power Climate Action."· We supported an art contest on the theme of environmental impacts of airport expansion. Erica Newman the fifth grade essay winner asked me to read this because she is celebrating her birthday tonight.. She says, "I'm fully aware that this plan to expand the Oakland airport could increase the amount of money earned and more money means nicer things but think of this.. If we increase the amount we fly California will have more wildfires.. Some places in California will be too hot to live in.. San Joaquin Valley and Tulare Lake Basin have already flooded from the bad California storms.

If agricultural land gets flooded there won't be enough food and that would cause food shortages.. As icebergs melt the sea level will rise and the cities near the coast will flood so what's the purpose of nicer things if we can't live in California?"· Therefore, having now heard what Erica has said we should modernize the airport without expanding it.. Thank you.

1

2

Response to Commenter P-659

1. For a discussion of climate change and sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-662**Heather Macleod**

As a world, we need to cut emissions in half in the next 7 years. We need to REDUCE air travel, not expand it.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-662

1. The commenter's statement about reducing air travel is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.

7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-663**Heather Macleod**

I'm a teacher and one of the adult advisors for "Youth Power Climate Action." I'd like to speak to the assumption in the DEIR that the airport has to expand because market forces and demand require it. Forecasting the future is always dicey and especially now when we live in unprecedented times. Market forces aren't some inevitable thing like the force of gravity. They're simply people and companies who hope to make a profit; the airline companies who spend millions on advertising and frequent flier incentives to create a habit of flying, the oil companies who care more about the billions of dollars they can make than they do about the health and well-being of people and animals on our planet but there are forces that will decrease the number of airline passengers as well. Not only the storms and fires that cancel flights but the force of human creativity which allows us to find ways to have great vacations close to home, the forces of self-preservation and love for future generations, the forces of caring and of rationality make people decide to try less polluting forms of transportation or to cut one or two flights so they can cut their personal emissions in half.

1

We ask you the Port to be on the side of the forces who want to breathe clean air and have a planet we and our children can live on. Please don't make more gates, please don't invite and encourage the airlines to pollute more. We can cut flight emissions from Bay Area airports in half in the next six years but not if you add 16 new gates. Thank you.

2

Response to Commenter P-663

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service.

Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.

2. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-664

Heather Macleod

I'm a teacher and I live in East Oakland.. I'm with "Stop OAK Expansion Coalition."

1

My students have learned from experience that climate change is real.. They've worn masks at recess because of smoke from wildfires, they've had after school classes canceled because of high winds and rain, they've been affected by asthma.. They're really sad about the extinction of lemurs and other mammals.. They know that climate change is created by fossil fuels and they know that we need to cut our emissions in half and they're really confused about why we adults don't seem to take this seriously.

This DEIR is irresponsible in a literal sense.. It says expanding the airport will put pollutants in the air that will harm the health of workers and people who live nearby, that it will increase greenhouse gasses that cause global warming but it fails to take responsibility for these respects simply saying that the Port does not have the ability to regulate airplane emissions so they're unavoidable.. They're only unavoidable if you build it because if you build it they will come.. I won't tell my students that asthma is unavoidable, that climate change is unavoidable.

2

The point isn't what you can regulate. It's the effects of what you choose to do.. By building 16 more Port gates the Port is responsible for inviting, encouraging, and enabling increased airline emissions.. Please don't expand the airport. I know it is needed the change of plan that you've worked on for so long but there are other ways to make money, there are other ways to travel.

Last year I traveled to San Diego five times, three times by overnight Flix and Greyhound buses, once by train, and once in my Chevy Volt. I can't regulate the pollution coming from airplanes either but I can decide to cut the pollution I create and so can you.. Thank you.

3

Response to Commenter P-664

1. The commenter's statement regarding their students learning about and reacting to climate change is acknowledged.
2. The Proposed Project is intended to better accommodate the forecast market demand in aircraft operations and enplanements.

The EIR identifies impacts that could occur but that the Port does not have the authority to control. These impacts are generally associated with aircraft operations. While OAK is subject to the regulatory authority of the FAA and TSA, the airlines

retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

In the past sixteen years, four medium-hub airports (Indianapolis International, Jacksonville International, Louis Armstrong New Orleans International, and Sacramento International) opened new passenger terminal buildings (see **Table P-4** in Global Response A: Aviation Forecast). The national number of enplanements is included in this table as a reference to show national trends in enplanements both before and after these four terminal buildings were opened. In comparing the number of enplaned passengers prior to and after the opening of the passenger terminal building, it is evident that there is no correlation between the construction of a passenger terminal building and an increase in annual enplanements at the same airport. This data shows that the passenger terminal building does not increase passenger demand at an airport. The demand for air transportation is a function of the socioeconomic conditions of the region served by the airport, not the attractiveness of a new passenger terminal building. The Proposed Project would accommodate forecast demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.

3. The commenter's statement about their travel modes is acknowledged.

Commenter P-665

Ginny Madsen

I live only a few miles as the crows fly from Oakland Airport . II can literally see what is happening at the airport shoreline from my back door: Sea Level Rise. And I share airspace with the airport. The future survival of the airport would be better served by putting those new gates up on stilts and adding piers for water taxis. 1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons: 2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 3
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 4
- Aviation is hard to decarbonize and biofuels are not the answer. 5
- It's too much noise. More Flights= More noise. 6
- Sea level rise threatens shoreline development. 7
- Labor rights are at stake. 8
- Inequity: flying is an elite privilege with high costs for everyone else. 9
- We have alternatives. Invest in Rail. 10
- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

1

Response to Commenter P-666

1. The commenter's statement regarding looking forward to seeing the growth meet the demand is acknowledged.

Commenter P-667**Karen Magnuson**

Aside from the added noise is the pollution. The plants in my yard are covered with residual exhaust from the planes. A thin layer of sticky black soot covers the leaves. That's what is visible, let alone what we breathe. It's going to be so much worse should the airport expand.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

YOU MUST BE KIDDING US???????? Let me understand this mess you have created called Nextgen First. For the past five years we have been living with this nightmare, and all around the USA more and more people (Tax Payers) have been complaining about the increase of jet noise!!! and the program called Nextgen. We bought our home here in the Oakland hills for the quite, trees , and the nature that is here. Then Nextgen came to town and our lives have been changed, adding stress , countless sleepless nights, scaring my children with low flying jets , shaking our home, and the damage to it, the nonstop bombardment of jets, coming and going. We have made thousands of complaints with some asking for paths to be moved over the freeway system 13, 580, 880, or fly in over the frontage of the bay there is plenty of room there!! I mean if Nextgen is so great this should be a no problem right???????????? why cant you keep these flights over the bay????? who cares if it takes a few more minutes of flight time!! stop destroying lives, or at least spread out the flight paths its only fair why should a the oakland hills take the brunt of the noise!!!! or better yet the original flights paths. Oh they only worked for the past fifty years so lets screw things up and shove Nextgen down the tax payers throats. And know you want to add more gates????? Causing more harm to us. First fix the mess called Nextgen and listen to the tax payers who in fact pay for most of the programs. I have a bad feeling about this, the airports and the FAA are corrupt to the point of nausea and will do it anyway regardless of what we say. Well if this goes through we are done here, and will move!!!! we have had enough of the madness, the crime, crazy people, garbage, graffiti, homeless, drugs, high property taxes, the nonstop flights over our home and now this. We are throwing in the towel!!!!!!!!!!!! were done with Oakland!!!!!!!!!!!!!!

1

Response to Commenter P-671

1. The commenter's statement regarding NextGen is acknowledged and not related to the EIR. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

Commenter P-672**Allison Marin**

More flights = more global warming, more pollution, more noise. No thanks.	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2

• Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
• Aviation is hard to decarbonize and biofuels are not the answer.	5
• It's too much noise. More Flights= More noise.	6
• Sea level rise threatens shoreline development.	7
• Labor rights are at stake.	8
• Inequity: flying is an elite privilege with high costs for everyone else.	9
• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	11

Response to Commenter P-673

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. The commenter’s opposition to the Proposed Project is acknowledged.
2. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter’s concern regarding perceived inequities associated with air travel is acknowledged.

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-674
Suzanne Marquis

Do not expand the Oakland airport. The airport expansion would increase pollution, CO2 and noise. We already have too much of that from the Oakland airport and the Oakland Port. We don't need to expand the Oakland airport. The fact that it is small is what makes it nice. If we want big airport, we can go to San Francisco airport.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.
8. We have alternatives. Invest in Rail.
9. We have alternatives like remote business and conferencing.
10. We need to shift towards climate-just transportation.

Response to Commenter P-674

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. The commenter's opposition to the Proposed Project and keeping OAK small is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed

Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-675
Susanna Marshland

I don't think this expansion and the noise and chaos that comes with it is necessary nor environmentally wise right now. I would likely be more supportive of this project if the planes were electrically powered. But as is, this expansion has a significant impact on the nearby communities.	1 2

Commenter P-678**Bob Martin**

I am dead set against airport expansion in Oakland (or anywhere for that matter). We are in the midst of a climate crisis and the most suicidal and therefore stupidest thing we can do is continuing using fossil fuels. Planning to increase their use through expanding jet travel has to be called murderous and sociopathic. Anyone even considering doing this should be removed from their position of power immediately.

Response to Commenter P-678

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-679**Bob Martin**

I have taken a lifetime pledge never to fly again because I want there to be a future for humanity. We must rapidly decrease flying as part of the existential battle to fight the climate crisis. The last thing we need is an airport expansion. We need a quick contraction!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-679

1. The commenter's statement pledging to never fly again is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast

market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-680**Earnest Martin**

I attended the public meeting presented by the Port of Oakland on 8/15/2023. I was unable to get my noise questions answered before the presentation at the noise booth due to a line of people waiting to ask questions to the one port rep they had designated for this. How do I contact the person responsible for public noise concerns? thank you

1

Response to Commenter P-680

1. RS&H to prepare response.

Commenter P-681**Suzanne Martin**

I LOVE the convenience and size of OAK. It can use some upgrades but definitely does NOT need to be expanded. If we want a large airport, we can go to SFO, which is close enough for the large international airplanes. Keep OAK just-right-sized!

Thank you.

1

Response to Commenter P-681

1. The commenter's statement regarding loving the size and convenience of OAK is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.

Commenter P-682**Suzanne Martin**

I enjoy living on Bay Farm Island in Alameda. The airport has been a pretty good neighbor. Occasionally, there are non-compliant flights that wake us up when flying outside the regulated hours. When there is construction on the South Runway, the increased flight traffic and noise can be annoying, but I understand that safety is very important, so the inconvenience is understandable.

1

BUT, if the proposed airport expansion takes place, this will ruin our quiet neighborhoods! The continuous thundering of jets, resulting in dogs barking and car alarms going off is unacceptable! The smell of jet fuel is unhealthy, and the rumbling of windows is enough to drive any sane person crazy - not to mention, families with small children or sensitive adults, people trying to work from home, or anybody wanting some peace and quiet in their own houses. Everybody's property values will plummet on top of it all, preventing some families from selling and moving to quieter, more environmentally sound neighborhoods.

I strongly oppose the proposed airport expansion without significant mitigations to noise and environmental hazards!

2

Response to Commenter P-682

1. The commenter's statement regarding the airport being a good neighbor is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

2. The commenter's opposition to the Proposed Project is acknowledged. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.

Commenter P-683**Suzanne Martin**

We can handle the regular flights going over the water but when they're flying over our homes, the noise and smell of jet fuel is UNBEARABLE!! PLEASE DON'T EXPAND OVER OUR NEIGHBORHOODS!!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-685**Joseph Martinez**

The Oakland airport expansion could lead to increased greenhouse gas emissions and air pollutants from flights, contributing to climate change and health risks. It will cause more noise and traffic congestion in nearby areas, impacting residents' quality of life. The project doesn't account for emissions from arriving and departing planes, which aren't regulated by the airport or state.	1 2 3
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	4
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	5
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	6
3. Aviation is hard to decarbonize and biofuels are not the answer.	7
4. It's too much noise. More Flights= More noise.	8
5. Sea level rise threatens shoreline development.	9
6. Labor rights are at stake.	10
7. Inequity: flying is an elite privilege with high costs for everyone else.	11

8. We have alternatives. Invest in Rail.	12
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	13

Response to Commenter P-685

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. **Section 3.11 and 3.13** of the EIR discuss noise and traffic impacts, respectively. No significant noise or traffic impacts would occur as a result of the implementation of the Proposed Project
3. As described in **Section 3.11.1.4** of the EIR, the Aviation Environmental Design Tool (AEDT), which is the model approved by the Federal Aviation Administration (FAA), takes into account all aircraft operations arriving and departing out of OAK as well as the time of day the operation is occurring. The model utilizes aircraft profiles to calculate noise emissions throughout an aircraft's flight track. See Global Response D: Noise for more information.

To provide a conservative analysis, the Port elected to compare impacts of future 2028 and 2038 levels of aviation activity at OAK to the impacts of 2019 OAK aviation activity. The reason this approach is conservative is not due to the selection of a 2019 baseline year. The approach is conservative because, as explained in the EIR and in Global Response C: Baseline, the Proposed Project would not change the market demand projections of aviation activity at OAK for 2028 and 2038. Because the Proposed Project would not cause a change in OAK aviation activity, those changes are not impacts of the Proposed Project and the Port was not legally required to analyze the impacts of such change. Unlike airport projects that add or reconfigure runways, for example, the Proposed Project improvements would not affect the number of flights that OAK could accommodate or their flight paths. Therefore, the Port chose to follow the example of the 2020 Norman Y. Mineta San José International Airport Master Plan EIR to describe, and explore potential mitigation for, the impacts of projected future increases in flight activity at OAK that would occur with or without the Proposed Project.

4. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

5. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
7. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
8. For a discussion of aircraft noise, see Global Response D: Noise.
9. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
10. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
11. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
12. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Sharon Martinez

Weekend of September 22-24th the airport needed to use North field airport runway for regular flights on SW/Alaska etc. due to work on taxi runway. It was so LOUD even w all our windows closed in our home. It took all the peace away from our community and disturbed sleep very much. This proposal will absolutely change Harbor Bay forever as no one will want to live w planes so LOUD and so close to our homes when they take off over our homes. It's one thing to have private small planes take off but super loud jet engines much closer to homes and have to gun it with liftoff, is unacceptable. Our property values will plummet. Rethink other options to avoid close flyovers. The Mayor can give a bogus # of how many people will be using Oakland airport. I fly and the airport is quiet most days as business travel greatly declined. It's all about OAKLAND getting their money.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

31. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

32. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

33. Aviation is hard to decarbonize and biofuels are not the answer.

Commenter P-689**Andrew Massey**

I live on Bayfarm Island in Alameda. Airplane noise and pollution is terrible, particularly from the expansion of private non-commercial jets that cater to luxury travelers. These aircraft fly at low altitude directly over my home. The pandemic offered a welcome reprieve from airplane noise. The thought of airport expansion and the increase in noise and pollution is unacceptable. The Port should eliminate space for general aircraft that cater to the wealthy few and use it instead for certificated aircraft before expanding the airport.

1

There is a global dimension too. The High Speed Rail authority decided on an alignment on the Peninsula instead of in the East Bay. Now we are told we must expand the airport despite the climate impact. Either climate change is real and we shift from air travel to green electric rail transport, or it's a hoax and we can burn jet fuel forever. But you can't have it both ways.

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

3

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

I grew up in Chicago when O'Hare airport expanded. We ended up in the flight pattern where it was difficult to carry on outdoor conversation. Also, it was very disruptive to my family's sleep patterns. I am one of 8 children and 4 ended up with cancer. I believe that the contaminants from the airport / airplane pollution caused it.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-694**Greg Mastrangelo**

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity.

Impact summary:

New terminal with 65% more boarding gates
 84% more passengers
 15% more passengers per plane (larger gates)
 60% more airline passenger flights
 38% increase in cargo tonnage
 20% increase in cargo plane flights

1

2

The above would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

3

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

4

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

5

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

6

7

Response to Commenter P-694

9. The commenter's opposition to the Proposed Project is acknowledged.
10. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
11. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in

property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

12. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
13. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
14. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
15. The commenter’s statement regarding the City of Alameda is acknowledged.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4

• Sea level rise threatens shoreline development.	6
• Labor rights are at stake.	7
• Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	10

Response to Commenter P-695

Please consider investing in more climate friendly and equitable transportation options. We don't have time to waste. We need to drastically cut CO₂ emissions and reduce air pollution in frontline communities.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

Commenter P-697

Mary McCrea

We chose to live on the main island of Alameda because it is relatively quiet as compared to much of the Bay Area. But I?ve noticed that more planes and helicopters are flying over my neighborhood at all hours. The expansion would make the noise interable. People living on Bay Farm had to have their windows replaced because of vibration and noise from air traffic. Is there any plan to replace all of the windows on the historic houses on the main island? And what about the effect on air quality? We need to reduce the amount of toxic materials spewed into the atmosphere and more traffic at OAK will make our air quality even worse and lead to worsening man caused climate change. Please defeat this plan!

1

2

3

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

4

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

5

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

Response to Commenter P-697

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The noise analysis in the EIR describes the changes in noise associated with the increase in aircraft operations that would occur with or without the implementation of the Proposed Project. The Port established the Oakland Airport-Community Noise Management Forum in 1998 (Noise Forum), to provide a committee comprised of elected officials and citizen representatives to address aircraft noise issues related to OAK. With a 20+ year history, this forum is now an important standing venue for communication between the Airport and at least six neighboring communities and the county. With input from the Noise Forum, the noise management program has continuously improved with implementation of noise minimization measures, data capture, documentation, and communication tools. These measures and tools include voluntary “fly quiet” procedures for pilots, a noise monitoring system, a noise complaint reporting system, web-based aircraft report dashboards, community advisories, and continued advocacy on behalf of the community regarding FAA management of flight paths.

Name: Lori Hale. We live on Island Drive, Harbor Bay. Today I can smell and taste jet fuel periodically. The noise level of the increased air traffic, the increased car traffic on top of the fuel fumes and liquid that falls on our homes and gardens will be unmanageable and will drive home values down. Very, very unhappy and worried about this. Worried about the health of our kids. Please, please do not expand the airport.

1

2

3

Response to Commenter P-700

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement about being unhappy and worried is acknowledged.
3. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-701**Fawn McLaughlin**

I just wanted to thank and compliment all of the particularly the youth speakers that have spoken today. I'm impressed about their passion and concerned about the quality of their future and the emphasis I heard from these young speakers is basically don't proceed based on greed. I understand that the Port needs to be competitive with other airports in the region but we don't want this to be a race to the bottom and have an environment that people cannot tolerate and live in.

1

The other message I heard was that there are environmental impacts that we already experience. I live in Bay Farm Island which is in the flight path between the general aviation and the commercial runways and we have a common saying here when we're walking our dog in the morning like "Hmmm, nothing like the smell of jet fuel in the morning." So with its expansion it's only going to get worse.

2

I respectfully ask the Port to consider the comments expressed by the speakers and scale back this proposal to modernize without an expansion. Thank you, very much.

3

Response to Commenter P-701

1. The commenter's statement commending the youth speakers is acknowledged. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. The commenter's statement regarding flight paths and the smell of jet fuel is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. The commenter's statement requesting the Proposed Project be changed is acknowledged. Any alternatives that contemplated fewer gates and corresponding holdrooms and passenger processing facilities than identified for the Proposed Project would not meet the level of service criteria because it would not provide OAK with industry standard levels of service and, therefore, were not considered for further evaluation in the EIR. The EIR includes a reasonable range of alternatives to the Proposed Project. Also see Global Response I: Alternatives.

Commenter P-702**Brynn McNally**

I'm a time of climate crisis the last thing we need it to expand the airport. Doing so would entail grave environmental consequences, especially for people who live close by.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-704
Margaret McNulty

My name is Margaret McNulty and I am a Bay Area resident, retired college professor, mother and grandmother.

1

My message to you? The Proposed OAK expansion MUST be rejected!! As a mother and a grandmother, I cannot sit idly by and watch us continue to destroy our planet.

This Project gives a green light for increased aircraft emissions. It enables more growth, and many more flights, at the exact time we need to be LIMITING the growth of air travel and PUTTING THE BRAKES ON GLOBAL WARMING AND CLIMATE CHAOS.

2

Has Paradise taught us nothing? Has Lahaina taught us nothing? Increasingly ferocious weather, deadly wild fires... the earth is warning us. Find the courage to take action!

Anything which could increase climate chaos MUST be examined carefully. We cannot hide behind ANY argument anymore! WE NEED TO STOP WARMING OUR PLANET!!

Aviation emissions have increased by 44 percent in the past decade, and emissions are expected to triple again by 2050. This would constitute more than a QUARTER of the total emissions consistent with keeping temperature rise below 1.5°C.

"Oh, but this is just one project, and its negative impact is being exaggerated." Nope, sorry, not a credible argument. Look at the EIR: It does not use THE MOST RECENT DATA available when making its projections.

Maintaining this business-as-usual path WILL result in additional greenhouse gas pollution.

For one, the Draft EIR has not factored in aircraft emissions OUTSIDE OF TAXI-ING, TAKE OFF and LANDING. Most global warming emissions are from FLIGHTS, not airport ground operations.

By rejecting this expansion, you will stand with climate scientists around the world, who have been telling us that we cannot afford to do ANYTHING which could further endanger our planet. As a first world country, we can set an example for the world to follow. We can state unequivocally that we are prioritizing ALL our children and grandchildren's future over short term gains!

3

I implore the Port to REJECT THIS PROJECT!

Thank you for your time.

Response to Commenter P-704

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

3. The commenter's statement regarding standing with climate scientists and opposition to the Proposed Project is acknowledged.

Commenter P-705

Sean McQuillan

General opposition to the airport expansion	1
---	---

It would cause an increase in global warming	2
--	---

And unfortunately has all the appearances of a company trying to expand revenues at the cost of our future. I can think of no part of the Oakland airport that mitigates global warming, and it is one of the largest causes of global warming in East Bay	2
--	---

Response to Commenter P-705

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions would occur whether or not the Proposed Project is implemented. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-706

Kate Meadows

We are in a climate crisis. Only 20% of people in the world have ever flown. It is an elite activity which destroys the stability of our planet. One round trip OAK to LHR for one person emits more green house gases than 3.4 billion people emit annually. Flying is destructive to our collective future, our current health and is highly unjust. We can collectively make better decisions to live differently and move toward a healthier, happier present and future. This means we need to have the courage to say enough is enough and work for new ways that serve us all better. Flying will become something of the past. The question is will this happen by design or by disaster. It is in the hands of those living now to make new choices that can lead us in a more positive direction. I hope those responsible for decisions about the Oakland Airport will have the courage to choose to be on the right side of history, for all our sakes.	1
---	---

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
---	---

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-706

1. The commenter’s statement regarding being in a climate crisis and how flying is destructive is acknowledged.
2. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-707**Sarah-Jane Measor**

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents. I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion. I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

1

2

3

4

5

6

Please do not approve the expansion proposal until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

7

Response to Commenter P-707

1. The commenter's opposition to the Proposed Project is acknowledged. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
2. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
4. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-708

Commenter P-709**Paul Medved**

Not until the airport and airline industry in general are no longer dependent upon fossil fuels should any plans for expansion of facilities or services be considered. Period. Full stop.

1

Response to Commenter P-709

1. The commenter's statement regarding opposition to the Proposed Project is acknowledged. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.

Commenter P-710**Paul Medved**

Our family, living as we have on Bay Farm Island since 1980, has developed very real concerns about the harmful effects of ultra-fine particulate matter emissions originating from aircraft operations - even as they exist today. This is certainly relevant in a respiratory context, but we've also noticed that the very fine black dust coating our property year in and year out also tends to reduce the permeability of our otherwise very well-draining sandy soil. Water just beads up on it in a very unnatural way. This can't be good for landscaping, but also could contribute incrementally to the risk of local flooding in unlandscaped areas due to accelerated stormwater runoff.

1

Moreover, and overridingly, at a time when we all must reduce, not expand, our consumption of fossil fuels, no such expansion should take place until airport and aircraft operations no longer depend upon them. Doing so would be both unmitigatable and unforgiveable.

2

Response to Commenter P-710

1. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement. **Section 3.9** of the EIR discusses hydrology impacts. No significant stormwater impact would occur as a result of the implementation of the Proposed Project.
2. The commenter's opposition to the Proposed Project is acknowledged. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.

Commenter P-711**Paul Medved**

Commenter P-712**Daria Mehra**

I live near the Oakland airport, understand its importance and at times utilize OAK flights (infrequently, as I am mindful of my carbon footprint). I urge sto limit further expansion of the airport to protect our community, the ecosystem of the Bay, and planet Earth. Let's not sacrifice the future world of our children to short-term economic gain of shipping extra packages on FedEx planes of things we don't need to buy, or sending business travelers on extra flights for trips that could just as well be Zoom calls. We know how to live better, lighter, more efficiently. Please stop the expansionist policies and grow our region in a well-planned, sustainable way.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-714**Aakash Mehta**

I live very close the airport and already there is a lot of noise with all these jet planes going up and down. Flying low and complete Disregard to the neighborhood. Big jumbo jets further feel the sound vibration and disturbance problem and spoil the air quality. There is also a big danger of big planes falling during takeoff. There are so many other ways to travel. There is no need for international flight expansion here. Kids are suffering, elderly are suffering . Direct impact to community health. We cannot handle this traffic.

Response to Commenter P-714

1. The commenter's statement regarding the noise from jet planes flying low and disregarding the neighborhood is acknowledged.

2. The commenter's statement regarding sound vibration and spoiled air quality from big jets is acknowledged.
3. Airport operations at OAK meet all required safety standards of the Federal Aviation Administration.
4. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
5. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
8. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
9. For a discussion of aircraft noise, see Global Response D: Noise.
10. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
11. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
12. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
13. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
14. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-715**Jeffrey Melcher**

Record heat, warming of oceans, local air quality degredation, increased cancer to employees, --- global environmental collapse. How can you reduce the damage?

1

- Do not create more parking – require mass transit updates increasing BART and other methods to access OAK.

- Do not expand to “meet market needs.” Let the “market” figure out another way to solve flight congestion. ie charge more per flight, support more rail.
- Let the market adjust to fewer flights and cramped planes. People can adjust to this discomfort vs. global environmental collapse.

2

Response to Commenter P-715

1. The commenter’s statement regarding global environmental collapse is acknowledged. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR. OAK provides infrastructure and encourages alternate modes of transportation such as bike paths leading to the airport, bike parking, and the BART connector.
2. For a discussion on airport growth, see Global Response A: Aviation Forecast.

Commenter P-716**Jeffrey Melcher**

Has the airport project manager considered the costs of the lawsuits which these youth and college students will bring to this conversation? You know they are already planning on a lawsuit right?

1

Response to Commenter P-716

1. The commenter’s statement regarding considering the cost of lawsuits from youth and college students is acknowledged.

Commenter P-717**Jeffrey Melcher**

I am from Berkeley and I'm one of the adult advisors for a group called, "Youth Power" and we have -- I'm going to read an essay by a fourth grader who was a little too shy to speak but the words are hers.. "If you burn gasoline you get pollution.. Airplanes burn a lot of gasoline and so they make a lot of pollution.. If you make the airport bigger there will be more planes.. If there are more planes there will be more pollution.. The pollution can cause wildfires which cause smoke and ash in the sky.. This makes people with asthma go to the hospital.. The pollution makes the climate hot and sometimes the heat kills people.. Please don't make the airport bigger.. It will cause more pollution and more heat of the atmosphere."

1

I would also like to make some personal comments on my own.. I'm just seeing a -- I've been through this presentation several times beginning to understand that the climate impact is very local about what's happening specifically during the construction which I want to address is I'm not hearing that there is climate impact, environmental impact on the materials itself; the concrete, the metal, the plastic.. All the things that are used to make this airport expansion. also have effects on the climate by production of those things and I think that those should be included.. And then probably also adding the effects of the seawall that would need to be around the airport from the melting of the ice caps due to the output of airplanes so there's a kind of a cyclical cycle that needs to be addressed here on a larger aspect.. Thank you.

2

Response to Commenter P-717

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. For a discussion on climate change and sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-718

Jeffrey Melcher

I spent the evening of my 61st birthday on line with Port of Oakland responding to the EIS. I was really wanting to send a clip of that meeting to my friends and family.

1

When is it going to be posted?

Response to Commenter P-718

1. All records and transcripts of the public meetings are available at:
<https://www.oaklandairport.com/terminaldevelopment/>.

Commenter P-719

Hilary Menendez

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will have major negative impacts on residents and schools in its vicinity.

1

2

With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and

schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB for neighborhoods and schools from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

3

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

4

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

5

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

6

7

Please ensure proper due diligence is done and our air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

8

Response to Commenter P-719

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in

property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter’s statement regarding the City of Alameda is acknowledged.
8. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively.

Commenter P-720
Nigel Menendez

Commenter P-721

Joyce Mercado

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.

5. Sea level rise threatens shoreline development.	6
6. Labor rights are at stake.	7
7. Inequity: flying is an elite privilege with high costs for everyone else.	8
8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Response to Commenter P-721

Commenter P-725**Peggy Merz**

In consideration that our Climate is in a state of collapse adding 17 new gates at the Oakland Airport would fit the definition of insanity. And by that alone it would be grossly irresponsible of the Commissioners to approve an expansion at the Oakland Airport. Not to mention the families, the elderly and the children who will be affected my increased pollution of the air they breathe. [And the noise pollution.] We are all at a critical time of our very existence to rethink how we do everything if we are to survive. It is a time to seriously consider how we are going to ensure not only our future but most importantly what will we give to our children and grandchildren; a planet that has toxic polluted air and water that will not support life. It is NOT a time for shortsightedness. NO OAKLAND EXPANSION!!!

11. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
12. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

13. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
14. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-726**Karen and Keith Miller**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- | | | |
|-----|--|----|
| 1. | We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming | 1 |
| 2. | Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution | 2 |
| 3. | Aviation is hard to decarbonize and biofuels are not the answer. | 3 |
| 4. | It's too much noise. More Flights= More noise. | 4 |
| 5. | Sea level rise threatens shoreline development. | 5 |
| 6. | Labor rights are at stake. | 6 |
| 7. | Inequity: flying is an elite privilege with high costs for everyone else. | 7 |
| 8. | We have alternatives. Invest in Rail. | 8 |
| 9. | We have alternatives like remote business and conferencing. | 9 |
| 10. | We need to shift towards climate-just transportation. | 10 |

Response to Commenter P-726

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical

infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter’s concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter’s statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-728**Tammy Miller**

I am very concerned about excessive air pollution occurring in Alameda due to Oakland airport's expansion plans. There is already a black gritty dust that settles weekly in our home, and I'd like to know why the airport is expanding so much? We have SFO, San Jose and Sacramento all in proximity. Oakland airport closes its restaurants early because there aren't enough patrons. Why is it expanding? What is it doing to help protect my community from jet fuel, mechanical solvents, noise pollution and wildlife destruction?

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.
8. We have alternatives. Invest in Rail.
9. We have alternatives like remote business and conferencing.
10. We need to shift towards climate-just transportation.

Response to Commenter P-728

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Section 3.3 of the EIR discusses air quality impacts. No significant air quality impact would occur as a result of the implementation of the Proposed Project.

2. **Chapter 2** of the EIR discusses the Proposed Project and its project objectives. The Proposed Project is intended to better accommodate the increase in aircraft

operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.

3. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.
4. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
7. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.

11. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
12. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-729**Mary Min**

As someone who lives directly below the flight path, we are concerned that expanding the airport will result in an unlivable level of noise. Even with dual pane windows, there are times where the noise level is high, and if that frequency increases, it will be untenable. We love where we live, please don't make us have to choose between our hearing and our happiness.

1

Response to Commenter P-729

1. The commenter's statement regarding noise below the flight path is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast. See also Global Response B: Flight Paths and Procedures.

Commenter P-730**Marna Mitchell**

We have lived here 35 years. We never expected the airport to suddenly expand like this. When the runways are being repaired we get terrible, bone-rattling extraordinarily loud flights directly overhead. We can't be outside. The dogs cower. We can't carry on phone conversations. Car alarms in the neighborhood go off. If the airport expands this will be how it is 24 hours a day. Do not ruin our lives!

Commenter P-735**Molly**

Hi, I am a citizen of west Oakland and grew up in west Berkeley. West Oakland is surrounded by highways on all sides of the neighborhood, plus the heavy burden of emissions from the port and the airport cause even greater air pollution. Children here are born with birth defects, developmental disorders, and chronic illness due to the pollution. I want better for my own future children, despite already facing autoimmune disease, which is another condition occurring at high rates in polluted communities, and which puts my future children at further risk. I don't know if my children will get to see a better world, but I know what a worse world looks like: continued over-reliance on unsustainable fossil fuels and lack of investment in sustainable transportation. All of the money that is proposed for this airport expansion needs to be put into sustainable travel infrastructure instead. High speed rail is an option that come to mind. I frankly don't care about the "projected" rise in people traveling to Oakland by plane. Those studies are done based on the idea that the earth has unlimited resources to give. The idea that flying will become more and more popular is based on a faulty understanding of reality. Therefore it is simply immature and irresponsible to keep pretending that we should be investing in a system of travel based on fossil fuel, which is by definition, unsustainable. You might choose to continue living in this dream world of magical thinking, but the majority of human beings on this planet have our feet firmly planted on earth. This is an opportunity to stop something horrible from happening. This is a chance to prevent the burden on the shoulders of our children from being that much heavier.

1

2

Response to Commenter P-735

1. The commenter's statement regarding West Oakland being polluted and children growing up with autoimmune diseases is acknowledged. As part of the air quality

analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.

2. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. See Global Response I: Alternatives.

Commenter P-736

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-738

Kevin Moore

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-738

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.

6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. 11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-740**Cathie Morgan**

SFO allows descending flights to pass directly over my home in Alameda every 3 to 5 minutes when there is some cloudy and stormy weather. This goes all day and night, often times until 3:00am, only to start again at 5:00am. It is making me physically ill and severely impacting my life. If Oakland airport is allowed to expand, the impact to our city would be unbearable. Nothing about this noise, air, and environment pollution would keep from destroying the peace of mind and the health of the people of Alameda. The permanent damage it would cause to the people on Alameda would shorten our lives and make living here an ongoing nightmare. The folks who planned this horrible expansion should be forced to go without sleep for a week to feel the resulting effects of sleep deprivation and see how Alamedans will be forced to feel every day if the expansion is approved. It should not be allowed.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

11

10. We need to shift towards climate-just transportation.

12

Response to Commenter P-740

- The commenter's statement about SFO descending flights is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not

the Proposed Project is implemented. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

2. The commenter's statement speaking against the Proposed Project is acknowledged.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-749**Jose Moura**

This matters as the smell of the JP5 as well as the Soot here at my address on Garden Road is already bad enough with my Asthma along with the Noise from the Jet Engine's Departing especially at night and early morning hours doesn't allow a proper night's sleep. The pollution level has to Exceed the EPA levels here on Bayfarm Island.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-749

1. The commenter's statement regarding soot and noise from jet engines is acknowledged. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G:

Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.

• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	11

Response to Commenter P-750

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Commenter P-752**Njambi Mungai**

Will this construction project have an impact on the existing retail and food service concessions inside Terminal One and Terminal Two? How long will the project take to complete?

1

Response to Commenter P-752

1. The square footage identified in the Proposed Project is based on sizing of facilities using industry standards. Specific areas would be addressed during future detailed design. The construction is estimated to occur over 5 years

Commenter P-753**Donna Murata**

More planes equal more noise and traffic pollution. We can't afford to lose our estuaries and wildlife to greater pollution. Children and elderly particularly suffer increased health problems from airports. Traffic has not been well designed. Bay Farm Alameda is a unique community, designed to encourage people to walk, bike, and enjoy nature in their community. Students at local schools walk along the lagoon where they can observe the many birds and other creatures along the way. But noise pollution is amplified over the lagoon and pollution is detrimental to the trees and animals as well. This is not the best area to handle massive transport of commercial goods. Please consider alternatives. Perhaps hydrogen trains with sorting stations in inland areas. Ground transport takes less fuel than going airborne.

15

Response to Commenter P-753

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.
3. **Section 3.13** of the EIR provides analysis of traffic impacts that would occur as a result of the implementation of the Proposed Project.
4. **Section 3.4** of the EIR provides an analysis of biological resource impacts that would occur as a result of the implementation of the Proposed Project.
5. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation.
6. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
8. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. Commenter P-756**Mary Nagle**

Please take into consideration all of life immediately impacted by this proposed expansion. It is inconceivable that now in 2023 Oakland Airport would submit a plan to add more toxins to the air, displace birds, animals, humans who are "in the way" of this expansion. Furthermore, adding the toxins to our air which is already compromised by the fuels used by these airplanes. The Airport shows virtually no concern for the noise and toxins spewed into the air by the planes flying over homes, the waters, etc ... Why do we need more gates, modernization, etc? Think of the entire ecosystem that will be affected by this expansion Think beyond your vested interests, think of the health of the entire earth community . . .

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.

- Sea level rise threatens shoreline development.
- Labor rights are at stake.

• Inequity: flying is an elite privilege with high costs for everyone else.	10
• We have alternatives. Invest in Rail.	11
• We have alternatives like remote business and conferencing.	

• We need to shift towards climate-just transportation.	12
---	----

Response to Commenter P-756

1. The commenter's statement regarding perceived impacts of the Proposed Project is acknowledged. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK. **Section 3.3, 3.4, and 3.11** of the EIR discuss air quality, biological resource, and noise impacts, respectively, that would occur as a result of the implementation of the Proposed Project.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-757**Patricia Nagle**

I live about 3 miles from the airport.. I live directly in the path of planes flying on runway ten.

1

I'm assuming that runway ten will be one of those most used, again, as it seems to always be used for departures and arrivals.

I'm aware that this plan presented was presented today in a technical manner; however, that's not abstract from the effect of what's being done on human beings.. Our health is affected by this plan.. Our health is affected every single day by planes flying directly over our homes.

I'm saddened to see the lack of humanity, consideration for us in this plan.. Thank you.

Response to Commenter P-757

1. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

Commenter P-758**Eric Nakahara**

WE OPPOSE THE OAK EXPANSION. THIS WILL CAUSE A SEVERE IMPACT ON THE QUALITY OF LIFE ON BAY FARM ISLAND

6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter’s concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives,

and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-759

Keshav Narang

As a concerned citizen and a seventeen-year-old, I am writing to express my strong opposition to the planned expansion of Oakland Airport. This expansion proposal, which includes adding 16 new gates, is deeply concerning for our community, the climate at large, and my future. I implore you to carefully consider the following ten crucial reasons and halt the expansion immediately:

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-759

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.

Response to Commenter P-768

- The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. Also see Global Response E: Environmental Justice and Community Engagement.
- The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-769**Margaret Nickolaus**

For the love of humanity, please stop supporting and growing air travel

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

3

4

• Aviation is hard to decarbonize and biofuels are not the answer.	5
• It's too much noise. More Flights= More noise.	6
• Sea level rise threatens shoreline development.	7
• Labor rights are at stake.	8
• Inequity: flying is an elite privilege with high costs for everyone else.	9
• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	11

Response to Commenter P-769

1. The commenter’s statement regarding stopping the support and growth of air travel is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. The Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.
2. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-770
Sarah Nicolazzo

Airport expansion is in direct conflict with achieving our climate goals-- in a year on track to be the hottest in recorded history, now is the time to prioritize and invest in sustainable transportation, not more fossil-fuel-intensive flights. Many of the destinations served by OAK are close enough to be served by high-speed rail or electric bus; when I used to fly out of OAK frequently for work, I most commonly was traveling to southern California, but I desperately wanted a fast, comfortable, reliable train instead of having to fly. Air travel demand is not a given, especially when we invest in alternatives and make them better. Now, I am an Amtrak commuter, and what I most need in my daily life is improved, on-time, and frequent Amtrak service on the Capitol Corridor (on which trains are frequently over an hour late), not more flights that lead to more pollution in our city. Invest in rail and other forms of sustainable transportation!

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6

Commenter P-775
Rob Norback

The OAK expansion proposal raises substantial concerns that are hard to overlook, primarily relating to noise pollution and environmental issues. The projected increase in noise as a direct result of this growth can drastically affect the quality of life for local residents and potentially disrupt local wildlife. Additionally, the environmental implications are too grave to ignore, considering the increased carbon footprint and potential destruction of habitats.

Therefore, I strongly believe that the costs outweigh the proposed benefits and thus, I cannot support the OAK expansion.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

Commenter P-780
Jade Northrop

So, I'm here both as a resident of Alameda and also a member of Extinction Rebellion which is a local grass roots climate group and I just want to say that I really - - I do not support the expansion project. I'd like to speak firmly for considering ways to keep the airport at the current level. In particular, I'm concerned about the scope three emissions that I know aren't always part of CEQA overview but here's yet another plea for considering scope three.

1

So in CEQA we can consider the incremental contribution of a project through the sort of global situation that we're faced right with the climate crisis and you all said that you know there's this sort of unavoidable emissions that are going to be resultant of airplane operations. Now I know that the Port of Oakland and the airport don't actually control the airlines but the problem is there's the jurisdictional crack. Nobody wants to sort own those emissions right now, right? Nobody's regulating the sort of international and across states emissions from these airlines and so government agencies really do have the power to consider these types of things if you want to. I mean ultimately the main thing of the government is to sort of consider this longterm health and safety of the constituents in a way that public companies and private corporations can't do that , right? The U.S. has the strongest fiduciary responsibility laws of any country in the world so far. The government isn't beholden to that. So literally companies are - - they can't do anything but grow. They have a legal responsibility to do that whereas the government through things like CEQA reviewing things like that can actually regulate and protect the longterm interests of the citizens. So I just want to urge you to consider the fact that you really are in a very privileged position to be able to do that as opposed to sitting on the Board of the company or something like that where you can't.

2

So sorry yeah, I just think we really owe it to future generations to make these hard decisions now. I think we need to do everything we can incrementally to avert the sort of

snowballing effects that we're seeing from greenhouse gasses and I know that if the Port takes a leadership position and decides to limit expansion it's going to have a ripple effect and hopefully will inspire other jurisdictions to act. Thanks.

Response to Commenter P-780

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement regarding the regulation of airline emissions and scope three emissions is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-781

Ted Obbard

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-781

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-782**Ted Obbard**

The expansion of the Oakland Airport is concerning for the following ten reasons: 1. We are in a dire climate emergency and flying fries the planet. 2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Soni Obinger

I'm writing to inform you about my significant concerns regarding the proposed Oakland Airport expansion and ask you to consider and act on several fronts. I have lived on Bay Farm since I was a child and I'm well aware of the airplane noise and air pollution. But as the years have passed, it has gotten worse and I worry about the pollution right above our houses.

1

Key Concerns:

- **Increased Noise and Air Pollution:** Expanded flight operations, especially the North Field runway usage, would expose Bay Farm Island and Main Island residents and schools to escalated noise levels and jet fuel emissions. Existing South Field runway proximate neighborhoods already endure an average sound level exceeding the FAA-regulated 65dB.
- **Health and Environmental Risks:** Scientific studies, such as those conducted in residential areas of Boston, MA, underline serious health impacts from aircraft emissions, including premature death, decreased lung function, and childhood leukemia. Moreover, concerns linger regarding property value depreciation, wildlife impact, and boosted vehicular traffic.

2

3

Immediate Requests:

- **Comprehensive Local Studies:** Implement technical, localized, and independently verified studies, incorporating noise and air quality sensors at ¼ mile intervals from all OAK airport runways. The analysis should encompass all gases and pollutant concentrations, reflecting on the potential impact on residents. This data is conspicuously absent from the current DEIR.
- **Exploration of Alternative Mitigations:** Please explore and implement alternatives to mitigate noise and pollution impacts, such as mandating all commercial jets to use specific runways and altering flight patterns.

4

5

- **Assertive Opposition from the City of Alameda:** I would like to urge the City of Alameda to take a definitive stance against the expansion, reflecting the strong disapproval of its citizens.

6

- **Extension of Deadline:** Extend the October 16 deadline to ensure thorough due diligence and appropriately address all noise and air pollution concerns, safeguarding against immediate and future health risks.

7

Your earnest attention to these pressing issues is anticipated and much appreciated.

8

Response to Commenter P-783

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

Sections 3.4 and 3.13 of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state

the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
8. The commenter's statement regarding earnest attention to the issues presented is acknowledged.

Response to Commenter P-790

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-791**Christine Oliver**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.
8. We have alternatives. Invest in Rail.
9. We have alternatives like remote business and conferencing.
10. We need to shift towards climate-just transportation.

For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-792**Patrick Oliver**

Hello. My name is Patrick Oliver and I am a neighbor and local high school science teacher. My family and I live on 23rd Avenue in Oakland, about 7 miles from the airport. I urge you to immediately reject the proposed expansion of OAK airport.

1

The expansion is a dangerous scheme that threatens all of us. We are in a Climate Emergency and we need to act like it. There is NO WAY we can expand aviation and reduce greenhouse gas emissions.

2

The Draft Environmental Impact Report (Draft EIR) claims that demand for new flights would rise regardless of whether the Project is built, but that's insane.

3

If you build it, they will come. This is called "induced demand". Expanding the airport will expand the airport's pollution. Shrinking the airport would shrink its emissions, We need to reduce demand for aviation -- by making flying more expensive and burdensome and making low-carbon alternatives more inexpensive and easier.

It is ironic, of course, that sea-level rise projections due to carbon emission pollution, like those from OAK, threaten to put the airport under underwater from storm surges and rising tides. This will be well deserved, when it happens. The Port should not expect a taxpayer bailout or beg for an ineffective seawall to be built to save its polluting infrastructure when climate chaos hits.

4

Stopping OAK expansion matters to us because millions of species, particularly marine organisms, are threatened with extinction TODAY due to rising temperatures from your climate pollution.

5

OAK expansion will threaten our family's ability to breathe clean air and live on a healthy planet TOMORROW.

6

We urge you to cancel this project and work to reduce the huge pollution impacts that OAK is already responsible for.

Global aviation is killing us with carbon emissions, smog and black soot. This Project would enable more growth and more flights at the exact time we need to reduce emissions and prioritize our health. Thank you for your time.

Response to Commenter P-792

1. The commenter's opposition to the Proposed Project is acknowledged.
2. For a discussion on climate change and greenhouse gas emissions, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion on airport growth, see Global Response A: Aviation Forecast. The Port does not have authority over the cost of flights.
4. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion on climate pollution, see Global Response G: Greenhouse Gas and Climate Change.
6. The commenter's opposition to the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.

Commenter P-793**Patrick Oliver**

Expanding aviation puts us all at risk of climate chaos and local air pollution. OAK is big enough - - we can't make it bigger and meet our climate pollution reduction goals. Carbon emissions kill.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-793

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-797**Mary Orr**

• This DEIR fails to cite credible studies and data supporting its assertion that airport traffic will increase regardless of whether the airport expansion occurs or not. 1

• In October when work was being conducted on the OAK Main Runway, for several days all aircraft used the North Runway and the noise was relentless throughout the day and evening. It interrupted any ability to hear the audio on my Zoom meetings and phone calls even when using headphones. It was extremely invasive and nerve wracking.
 • An expansion and an increase in the number of commercial jets departing and arriving will create delays to smaller and private aircraft vying to take off on the OAK Main Runway. 2

These delays will increase the use of the North Field by more aircraft to avoid wait times due to the backup. The constant noise resulting from the increased traffic on the North Runway will increase anxiety and disruptions to Canada geese whose typical flight patterns takes them over the same area.

- The increase of traffic will increase the danger of accidents over highly-populated areas.

3

- If the Port of Oakland proceeds with the OAK terminal expansion, the Port of Oakland must reimburse homeowners and landlords the full amount for purchase and installation of new upgraded, soundproof windows and air conditioning units on all dwellings in the area to mitigate the impacts.

4

Response to Commenter P-797

- The Proposed Project is intended to better accommodate the forecast market demand in aircraft operations and enplanements.

The EIR identifies impacts that could occur but that the Port does not have the authority to control. These impacts are generally associated with aircraft operations. While OAK is subject to the regulatory authority of the FAA and TSA, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

In the past sixteen years, four medium-hub airports (Indianapolis International, Jacksonville International, Louis Armstrong New Orleans International, and Sacramento International) opened new passenger terminal buildings (see **Table P-4** in Global Response A: Aviation Forecast). The national number of enplanements is included in this table as a reference to show national trends in enplanements both before and after these four terminal buildings were opened. In comparing the number of enplaned passengers prior to and after the opening of the passenger terminal building, it is evident that there is no correlation between the construction of a passenger terminal building and an increase in annual enplanements at the same airport. This data shows that the passenger terminal building does not increase passenger demand at an airport. The demand for air transportation is a function of the socioeconomic conditions of the region served by the airport, not the attractiveness of a new passenger terminal building. The Proposed Project would accommodate forecast demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.

- Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast. **Section 3.4** of the EIR discusses biological resource impacts that would occur as a result of the Proposed Project.
- Airport operations at OAK meet all required safety standards of the Federal Aviation Administration.

4. The discussion of Part 150 Noise Compatibility Program measures is not included as part of the Proposed Project.

Commenter P-798

Mary Orr

I am a homeowner in the Bay Farm area of Alameda and after reading the DEIR (<https://www.oaklandairport.com/terminal-development-meeting-materials/#terminal-section-0>), a few important issues stood out to me:

- This DEIR fails to cite credible studies and data supporting its assertion that airport traffic will increase regardless of whether the airport expansion occurs or not.

• In October when work was being conducted on the OAK Main Runway, for several days all aircraft used the North Runway and the noise was relentless throughout the day and evening. It interrupted any ability to hear the audio on my Zoom meetings and phone calls even when using headphones. It was extremely invasive and nerve wracking.

• An expansion and an increase in the number of commercial jets departing and arriving will create delays to smaller and private aircraft vying to take off on the same OAK Main Runway. These delays will increase the use of the North Field by more aircraft to avoid wait times due to the backup. Aircraft engines kept running while waiting for takeoff will increase pollution unnecessarily.

• The constant noise resulting from the increased traffic on the North Runway will increase anxiety and disruptions to Canada geese whose typical flight patterns takes them over the same area.

• The increase of traffic will also increase the danger of aircraft accidents over highly-populated areas.

• If the Port of Oakland proceeds with the OAK terminal expansion, the Port of Oakland must reimburse homeowners and landlords the full amount for purchase and installation of new upgraded, soundproof windows and air conditioning units on all dwellings in the area to mitigate the impacts.

In an era when we desperately need to reduce Global Warming and help prevent more catastrophic Climate Change impacts, we should not expand beyond current levels of pollution in the Bay Area.

Response to Commenter P-798

1. The Proposed Project is intended to better accommodate the forecast market demand in aircraft operations and enplanements.

The EIR identifies impacts that could occur but that the Port does not have the authority to control. These impacts are generally associated with aircraft operations. While OAK is subject to the regulatory authority of the FAA and TSA, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

In the past sixteen years, four medium-hub airports (Indianapolis International, Jacksonville International, Louis Armstrong New Orleans International, and Sacramento International) opened new passenger terminal buildings (see **Table P-4** in Global Response A: Aviation Forecast). The national number of enplanements is included in this table as a reference to show national trends in enplanements both before and after these four terminal buildings were opened. In comparing the number of enplaned passengers prior to and after the opening of the passenger terminal building, it is evident that there is no correlation between the construction of a passenger terminal building and an increase in annual enplanements at the same airport. This data shows that the passenger terminal building does not increase passenger demand at an airport. The demand for air transportation is a function of the socioeconomic conditions of the region served by the airport, not the attractiveness of a new passenger terminal building. The Proposed Project would accommodate forecast demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.

2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast. **Section 3.4** of the EIR discusses biological resource impacts that would occur as a result of the Proposed Project.
3. **Section 3.4** of the EIR discusses biological resource impacts that would occur as a result of the Proposed Project.
4. Airport operations at OAK meet all required safety standards of the Federal Aviation Administration.
5. The discussion of Part 150 Noise Compatibility Program measures is not included as part of the Proposed Project.
6. **Section 3.3** of the EIR discusses air quality impacts. No significant air quality impact would occur as a result of the implementation of the Proposed Project. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-799
Fran Osborne

We need less air travel not more	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
<ul style="list-style-type: none"> • We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 	3

• Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
• Aviation is hard to decarbonize and biofuels are not the answer.	5
• It's too much noise. More Flights= More noise.	6
• Sea level rise threatens shoreline development.	7
• Labor rights are at stake.	8
• Inequity: flying is an elite privilege with high costs for everyone else.	9
• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	11

Response to Commenter P-799

1. The commenter's statement regarding less air travel is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives,

and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-800

Gracie Osborne

Not everyone has the privilege to fly, and East Oakland residents should not face the brunt of environmental injustice. Expanding the airport will significantly increase emissions, which is detrimental to our health. 1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons: 2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 3
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 4
- Aviation is hard to decarbonize and biofuels are not the answer. 5
- It's too much noise. More Flights= More noise. 6
- Sea level rise threatens shoreline development. 7
- Labor rights are at stake. 8
- Inequity: flying is an elite privilege with high costs for everyone else. 9
- We have alternatives. Invest in Rail. 10
- We have alternatives like remote business and conferencing. 11
- We need to shift towards climate-just transportation. 11

Response to Commenter P-800

1. The commenter's statement regarding the privilege to fly is acknowledged. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and

cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. See response to Comment #1 of this letter. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-801**Gracie Osborne**

I am with "Zoo versus Apocalypse" (sic).. I am speaking against expansion.. As a college student studying public health my interest is in learning how the environment, policies and corporations' actions impact people's lives.. We need to identify a few factors that undoubtedly impact peoples' quality of life.. Expanding the airport puts people's lives at stake.. Ultrafine particles, toxic fuel needed, and much more will be detrimental.. Environmental injustice can be silent but it's deadly.. We might not see the impacts right now but we'll see it in the long run and it impacts what future generations will face.. We need agencies and organizations that want to cut emissions by 2030 and similar years.. Why can't the Port do the same?.. Let's move forward in envisioning and implementing a world that's sustainable and beautiful.. Please say no to expanding the airport.. Thank you.

1 2

Response to Commenter P-801

1. The commenter's statement regarding speaking against the Proposed Project is acknowledged.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.

Commenter P-802**Fona Ou**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.

Rena Palloff

The recent weekend of constant plane traffic over the homes on Bay Farm didn't help this cause. It was intolerable and we suspect that the same or worse will happen with this expansion. This does not appear to be well studied at this point. Adding gates to OAK will not bring more business or passengers. What's the point?	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
41. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3

49. We have alternatives like remote business and conferencing.	11
50. We need to shift towards climate-just transportation.	12

Response to Commenter P-806

1. The commenter's statement regarding weekend plant traffic over homes is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
2. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-807**Rena M Palloff**

I am extremely concerned about the proposed airport expansion. The airport construction/maintenance that occurred this past weekend (9/23-9/25) was an indicator of the intolerable level of noise and air pollution that is likely to occur as a result. My house shook and we could not have a normal conversation both in and outside the house when the planes flew right over our house -- the frequency of flights was ridiculous and this will only increase with an expansion. Expanding the airport is not likely to bring back the flights and airlines that have left and will not solve whatever problems caused this to begin with. Air travel is in trouble in general -- expanding the airport will not solve the problem of flight

1

2

delays and, instead, are likely to increase this problem. Part of the rationale is that the population in this area has grown and that demand will increase -- where is the evidence that supports those claims? There is only so much air traffic that this area can support. Modernizing and updating the existing facility is fine, but adding gates and flights is not.

3

Response to Commenter P-807

1. The commenter's opposition to the Proposed Project and the shaking of their house due to planes outside is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement regarding airport expansion not solving flight delays is acknowledged.
3. The activity forecast for OAK was developed by the Port to provide informed projections of what the multiple airline and cargo operators are likely to offer (supply) in response to where people want to fly or where goods need to be flown (market demand). The forecasting methodologies are consistent with industry practice, meet FAA requirements, and are reflective of regional dynamics. The aviation activity projected in this forecast would occur in response to market demand. This forecast was approved by the FAA on December 29, 2022. See also Global Response A: Aviation Forecast.
4. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business.

Any alternatives that contemplated fewer gates and corresponding holdrooms and passenger processing facilities than identified for the Proposed Project would not meet the level of service criteria because it would not provide OAK with industry standard levels of service and, therefore, were not considered for further evaluation in the EIR. The EIR includes a reasonable range of alternatives to the Proposed Project. Also see Global Response I: Alternatives.

4

Commenter P-808**Chris Palowitch**

We don't need more flights!!! We need less! Local transport and finding things you need in your local community. BART already goes to SFO and has all the flight one could ever need. I do NOT need more flights. Thank you!
