3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-812**Sally Paris**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.

• It's too much noise. More Flights= More noise.	5
• Sea level rise threatens shoreline development.	6
• Labor rights are at stake.	7
• Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	10

Response to Commenter P-812

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-814**Jonathan Parry**

Renovation of existing terminals is ok, but do not build an additional terminal. It is diametrically opposed to our climate goals and will become a white elephant after completion of high speed rail phase I.

1

Response to Commenter P-814

1. **Chapter 4** of the EIR provides a discussion of alternatives to the Proposed Project, including a No Project Alternative, which is considered to be an alternative to the Proposed Project in conformance with Section 15126(d) of the CEQA Guidelines. The EIR evaluates alternatives to accommodate the increase in enplanements and aircraft operations that would occur with or without the implementation of the Proposed Project. Each alternative is analyzed for the ability to meet most of the basic project objectives while avoiding or lessening significant environmental effects. Thus, the EIR identifies and analyzes the range of alternatives available to the Port. See also Global Response I: Alternatives.

Commenter P-815**Erika Pascual**

This issue matters to me because I am an East Oakland resident, the airport is still about a 10 minute drive away but I still hear noise and I know if the airport expands it will only make pollution worse for the city. East Oakland does not need more pollution, the health of

1

2

residents gets impacted a lot by this and I have seen it first hand so this decision matters to me.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 4
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 5
- Aviation is hard to decarbonize and biofuels are not the answer. 6
- It's too much noise. More Flights= More noise. 7
- Sea level rise threatens shoreline development. 8
- Labor rights are at stake. 9
- Inequity: flying is an elite privilege with high costs for everyone else. 10
- We have alternatives. Invest in Rail. 11
- We have alternatives like remote business and conferencing. 12
- We need to shift towards climate-just transportation.

Response to Commenter P-815

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-816**Erika Pascual**

I'm speaking today against for expansion of the airport.. I'm a low income person of color who has spoken to children for years nearby by our homes and it's very important for these things to change.. It affects our health, our families' health by causing respiratory and health issues like asthma and can even lead to cancer.. We are often left out of these conversations even when they're affecting us the most and I've seen it personally in our

1	2
---	---

community and our family.· I've seen many people develop asthma and cancer and it's not just a coincidence especially because we are near the airport.· When you actually live through it and see the effects it changes your perspective and affects your life in many ways.

I believe that the airport should not expand until they find a way to do it without emissions and without damaging our community.. Thank you.

3

Response to Commenter P-816

1. The commenter's statement regarding speaking against the Proposed Project is acknowledged.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
3. The commenter's statement about not expanding the airport is acknowledged.

Commenter P-817

Kristen Pate

I'm writing to inform you about my significant concerns regarding the proposed Oakland Airport expansion and ask you to consider and act on several fronts.

1

Key Concerns:

- **Increased Noise and Air Pollution:** Expanded flight operations, especially the North Field runway usage, would expose Bay Farm Island and Main Island residents and schools to escalated noise levels and jet fuel emissions. Existing South Field runway proximate neighborhoods already endure an average sound level exceeding the FAA-regulated 65dB.
- **Health and Environmental Risks:** Scientific studies, such as those conducted in residential areas of Boston, MA, underline serious health impacts from aircraft emissions, including premature death, decreased lung function, and childhood leukemia. Moreover, concerns linger regarding property value depreciation, wildlife impact, and boosted vehicular traffic.

2

3

Immediate Requests:

- **Comprehensive Local Studies:** Implement technical, localized, and independently verified studies, incorporating noise and air quality sensors at ¼ mile intervals from

4

all OAK airport runways. The analysis should encompass all gases and pollutant concentrations, reflecting on the potential impact on residents. This data is conspicuously absent from the current DEIR.

- **Exploration of Alternative Mitigations:** Please explore and implement alternatives to mitigate noise and pollution impacts, such as mandating all commercial jets to use specific runways and altering flight patterns. 5
- **Assertive Opposition from the City of Alameda:** I would like to urge the City of Alameda to take a definitive stance against the expansion, reflecting the strong disapproval of its citizens. 6
- **Extension of Deadline:** Extend the October 16 deadline to ensure thorough due diligence and appropriately address all noise and air pollution concerns, safeguarding against immediate and future health risks. 7

Your earnest attention to these pressing issues is anticipated and much appreciated. 8

Response to Commenter P-817

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No changes in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

Sections 3.4 and 3.13 of the EIR provides an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a

significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
8. The commenter's statement requesting attention the issues listed above is acknowledged.

Commenter P-818
Sarah and Rodney Paul

Please help protect the bird and marine life in the area.	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2

Commenter P-820**Jose Luis Pavon**

Good afternoon to everybody, the Port Commission, all the stakeholders present.· My name is Jose Luis.. I'm a political organizer with SEIU/USWW.. Our office is adjacent to the northern runway at the Oakland Airport.. Me and all my colleagues we breathe all the air every day and as it was said earlier we represent workers at Oakland Airport and at SFO who are also directly exposed. I live in East Oakland, I live in the Fruitvale District, raise three children there, a 23-year-old, a 9-year-old, and a 5-year-old who are also breathing that air so I consider myself a direct stakeholder.

1

The Bay Area is a leader in environmental justice and environmental innovation and technology. It would be an absolute epic failure to expand an airport and not ensure that it was environmentally sustainable and that it was a leader, a model, at the international scale for building an environmentally sustainable airport.. To expand the airport and just increase emissions, it would be a direct form of racial inequality and it would directly impact our communities here as well as the people in the hills that are also right upwind from the people in the flatlands.

2

You know, a gentleman earlier said that you know a lot of people here drove cars without regard to their emissions but actually no.. We have one of the highest densities of sustainable vehicles in the country with electric vehicles, E85 vehicles, biofuel vehicles.. If we can build the infrastructure to change how our vehicles function to lower emissions we can build a low emission airport.. Thank you.

Response to Commenter P-820

1. The commenter's statement regarding being a worker at OAK and a direct stakeholder is acknowledged.

2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also, The Port commits to providing environmental awareness training for on-Airport workers (Port employees) and making appropriate personal protective equipment (PPE) available upon request. For on-Airport workers who are not Port employees, the Port will collaborate with tenants and provide environmental awareness documentation and materials to conduct training for their own employees.

Commenter P-821**Krista Peck**

I oppose the proposed expansion of Oakland airport. Simply put, the current noise levels are tolerable for our neighborhood. However, any increase in noise levels (whether modest or substantial or by decibel volume or frequency) will make the noise levels intolerable and thus be detrimental to our community and well-being.

1 2

Response to Commenter P-821

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-822**Susan Penner**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

2

• Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	3
• Aviation is hard to decarbonize and biofuels are not the answer.	4
• It's too much noise. More Flights= More noise.	5
• Sea level rise threatens shoreline development.	6
• Labor rights are at stake.	7
• Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	10

Response to Commenter P-822

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and

conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Response to Commenter P-823

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental

Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-824

Lidia Perdomo

As far as I know, earth is the only planet humans can live on and you are in a position to make a decision that can have lasting effects globally. It is imperative that as a decision maker with the power to influence such actions, you make the effort to push for projects that will begin to mitigate the climate crisis. One such project is a community and worker led just transition aways from fossil fuels. Humans forced depency on fossil fuels must come to an end. Will you help?

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.

3

4

5

6

• Sea level rise threatens shoreline development.	7
• Labor rights are at stake.	8
• Inequity: flying is an elite privilege with high costs for everyone else.	9
• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	11

Response to Commenter P-824

1. The commenter's statement regarding the climate crisis and dependency on fossil fuel is acknowledged. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Commenter P-826
Hester Perez

I am extremely concerned about the expansion of the airport and the negative impact it will have on my one year old son. It's bad enough to have the extra noise on Monday mornings during runway maintenance when the north field is used. It wakes us up constantly, and the repeated planes make it impossible to get back to sleep. I'm also worried about the impact the pollution from the planes and extra traffic to the airport, this can lead to childhood asthma which in turn can make him more susceptible to illness. If the airport does expand, I'll likely have to sell my house and move, however it seems like property value will have been impacted at they point.

1

2

3

Response to Commenter P-826

1. The commenter's statement regarding noise during mornings and the difficulty of getting back to sleep is acknowledged. For a discussion of aircraft noise, see Global Response D: Noise. **Appendix M** of the EIR provides information regarding sleep disturbance resulting from nighttime aircraft operations at OAK.
2. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.
3. Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another

way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

Commenter P-827

Hester Perez

I'm extremely concerned about my child's health with respect to hearing loss, insomnia and exposure to pollution.

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-827

- The commenter's statement regarding concern for their child's health is acknowledged. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

I hope you all and your loved ones are safe and healthy and have everything you need.
Thank you for reading my comment.

1

I am an Oakland resident. I brought up my family here. I have deep concern over the Draft EIR claim of expected passenger volume in the next 25 years when we are in a climate emergency requiring transportation options that are not fossil-fuel based. Additionally, by choosing 2019 as the comparative “baseline” year for travel data, the Draft EIR is not accounting for post-COVID flying patterns when business models and worker travel are still evolving post-Covid. We are in a climate emergency and the Port needs to use the most recent data available when making Long Term planning decisions for the health & safety of all of us.

Finally, the Project will have significant impacts for communities around the airport, who will be subject to years of noise and air pollution from continuous construction, including many demolition projects. These communities are already in non-attainment for various air pollutants, which the Project will make worse. It is unacceptable to make the communities around the airport sacrifice zones.

2

This project enables more growth, and many more flights, at the expense of people’s health and safety at the exact time we need to be limiting the growth or fossil-fuel travel & prioritizing the well-being of all our Bay Area residents. Please protect my community and reject this Project. Thank you and stay safe.

3

Response to Commenter P-831

- As stated in **Appendix B**, 2019 was determined to be the baseline year (existing conditions), which was pre-COVID. Section 15125 of the CEQA Guidelines requires an EIR to include a description of the physical environmental conditions in the vicinity of the Proposed Project to act as the baseline physical conditions by which a lead agency determines whether an impact is significant. As the Guidelines make clear, generally the baseline will be the environmental conditions existing at the time when the Notice of Preparation (NOP) is published. However, where existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the Proposed Project’s impacts, a lead agency may define existing conditions by referencing historical conditions. The goal of the analysis in the EIR is to disclose the impacts of the Proposed Project to the public and decision makers. To do so, using historical data from 2019, as opposed to the NOP date, to establish the baseline is appropriate to present a fair and accurate description of a Proposed Project’s expected environmental impacts. The degree to which aviation demand was reduced due to the COVID pandemic starting in 2020 is considered highly unusual. The NOP was issued in 2021, during a period of extreme change; the operations during this time would not provide a reasonable representation of normal activity. The Port, therefore, believes that the most recent pre-COVID conditions, as experienced in 2019, best represent the existing conditions for this analysis. Also see Global Response C: Baseline Year for a discussion of 2019 as the baseline year.

The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service.

Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.

2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.
3. The commenter's statement requesting the Port to reject the Proposed Project is acknowledged

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-833**Jane Perry**

I'm an Oakland resident and I'm a member of "100 Grandmothers For Future Generations."· I truly hope that you are safe and healthy and that you and your loved ones have everything that you need.· I appreciate that you've started this process way before we had the multiple pandemics that started in 2020.. We learned an awful lot of humbling, humbling information and heartfelt lessons about how we are all together in this climate and justice crisis as a planet and I really appreciate that you're here listening to us.

1

I have three thoughts.· One is it's really important to stand together with the workers who are on the front lines and if they're saying they're not healthy than this project doesn't feel sustainable to me.] The second thought I have is that the communities that live and are in unattainable levels of health and safety in the air and we have evidence of that hearing directly from a comment previously that sac-fly zones are no longer acceptable as a compassionate way that we as a community keep each other safe and healthy..] The third thing is I appreciate that you started this long ago before we began to think about what working and traveling means and we're just at the beginning of understanding what it's going to look like with remote work and to compare 2019 data as your baseline –

2

3

4

Response to Commenter P-833

1. The commenter's statement regarding being in the climate and justice crisis together is acknowledged.
2. The commenter's statement regarding standing with the airport workers on the front lines is acknowledged. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also, The Port commits to providing environmental awareness training for on-Airport workers (Port employees) and making appropriate personal protective equipment (PPE) available upon request. For on-Airport workers who are not Port employees, the Port will collaborate with tenants and provide environmental awareness documentation and materials to conduct training for their own employees.
3. Airport operations at OAK meet all required safety standards of the Federal Aviation Administration. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
4. As stated in **Appendix B**, 2019 was determined to be the baseline year (existing conditions), which was pre-COVID. Section 15125 of the CEQA Guidelines requires an EIR to include a description of the physical environmental conditions in the vicinity of the Proposed Project to act as the baseline physical conditions by which a lead agency determines whether an impact is significant. As the Guidelines make

clear, generally the baseline will be the environmental conditions existing at the time when the Notice of Preparation (NOP) is published. However, where existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the Proposed Project's impacts, a lead agency may define existing conditions by referencing historical conditions. The goal of the analysis in the EIR is to disclose the impacts of the Proposed Project to the public and decision makers. The degree to which aviation demand was reduced due to the COVID pandemic starting in 2020 is considered highly unusual. The NOP was issued in 2021, during a period of extreme change; the operations during this time would not provide a reasonable representation of normal activity. The Port, therefore, believes that the most recent pre-COVID conditions, as experienced in 2019, best represent the existing conditions for this analysis. Also see Global Response C: Baseline Year for a discussion of 2019 as the baseline year. For a discussion on forecast, see Global Response A: Aviation Forecast.

Commenter P-834
Jane Perry

I hope you all and your loved ones are safe and healthy. Thank you for reading my comment. Please keep our Oakland community safe and healthy as we face a climate crisis that means we must do everything to reduce global warming and carbon pollution. We are all in this together.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.
8. We have alternatives. Invest in Rail.
9. We have alternatives like remote business and conferencing.
10. We need to shift towards climate-just transportation.

Response to Commenter P-834

11. The commenter's statement regarding keeping Oakland safe and healthy is acknowledged. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
12. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
13. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
14. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
15. For a discussion of aircraft noise, see Global Response D: Noise.
16. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
17. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
18. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
19. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
 1. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-835

Sierra Petersen

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	2
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	3
3. Aviation is hard to decarbonize and biofuels are not the answer.	4
4. It's too much noise. More Flights= More noise.	5
5. Sea level rise threatens shoreline development.	6
6. Labor rights are at stake.	7
7. Inequity: flying is an elite privilege with high costs for everyone else.	8
8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Response to Commenter P-836

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is

forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-838
Lauren Picciani

Anyone living in Alameda knows how often planes from the Oakland Airport fly low and loud. Noise pollution is an overlooked category of physical stress that adds to anxiety in an already anxious urban area. The evenings are particularly awful, with one plane after another, making it difficult to relax after a stressful day and/or concentrate to finish work in the evening. And this goes on until just after 10 PM! Flight paths need to be adjusted to have these noisy pollution creators become more of a distant thing, and adding to the number of planes will just add insult to injury! I can only imagine life on Bay Farm Island. We are on the main island, and sometimes it sounds like the planes might be about to land on a rooftop! This is not conducive to peaceful enjoyment of our homes, for which most of us pay a hefty property tax! I don't care what studies say. Try living here, and then you'll know the reality. It's a daily stressor.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.

• Inequity: flying is an elite privilege with high costs for everyone else.	9
• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	

• We need to shift towards climate-just transportation.	11
---	----

Response to Commenter P-838

1. The commenter's statement regarding noise pollution in the evenings is acknowledged. **Section 3.11** of the EIR discusses noise impacts. No significant noise impact would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures. **Appendix M** of the EIR provides information regarding sleep disturbance resulting from nighttime aircraft operations at OAK.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. Commenter P-842**Bill Pinkham**

Planes produce an extraordinary amount of CO2 emissions. The planes that will fly from the proposed expansion will add yet another huge amount. Isn't what is turning out to be the hottest year the world has ever experienced enough evidence that severe climate change is happening already? And when the sea level rises by a relatively short amount the expanded airport will be under water. Maybe you should use the expansion money to build up nearby wetlands and/or build dikes.

Commenter P-844

Marie Pon

Honorable Mayor and Port Commissioners, The proposed OAK Expansion concerns me deeply in two ways. The aviation exhaustion and noise encroach in every living cells and lifes is a harmful concern. I am living under the flight pattern of North Field. I have slept and waken by excruciating noise made by maintenance crew all hours day and night. OAK's account of meeting carbon neutrality is a business ploy by disaggregation from aviation business. OAK is the principal enabler for every aircraft landing and take off on its location. It is not possible to expand the airport without harming the workers and every one on earth. Electric airplanes will be helpfull, however petroleum powered planes will never be obsoleted. No aircraft can contain its emissions. Currently air travels has gone down in OAK. Environmentally imformed people are re-thinking of the harmfull impects on living earth. I opposed the OAK Expansion. Thank you for taking my concerns seriously.

Response to Commenter P-844

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement regarding the containment of aircraft emissions is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and

TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

3. The commenter's statement regarding air travel decreasing and people re-thinking of harmful impacts on earth is acknowledged.
4. The commenter's opposition to the Proposed project is acknowledged.

Commenter P-845

Laura Porter

Please don't further destroy our environment and quality of life.	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-845

1. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-846
Elizabeth Preston

It is time to seriously address global warming. The expansion of the Oakland airport will increase the carbon released into the atmosphere. It is past time to reduce the carbon into the atmosphere by a large amount. No expansion of the Oakland airport. 1

Commenter P-848

P Pride

Will the financial cost of this project be on the residents of Oakland? Or will the financial cost be expanded across all counties?

1

Response to Commenter P-848

1. The Proposed Project would be funded through a combination of airline rates and charges, Airport Improvement Program grants, Passenger Facility Charges, and federal bonds.

Commenter P-849

Philana Pride

I Oppose the potential Oakland, CA, terminal development of the current terminal facilities.
My concerns include, but not limited to, the following.

1

HUMAN HEALTH RISK

The human health risk assessment (HHRA) estimates cancer risks, chronic (long-term) noncancer health hazards, and acute (short-term) non-cancer health hazards associated with exposure to toxic air contaminants (TAC) that would be emitted during construction

2

and operation of the Terminal Modernization and Development Project (Proposed Project) at Oakland International Airport (Airport or OAK)

ENVIRONMENTAL IMPACT | AIR QUALITY IMPACT

Pollutants Under the California Clean Air Act (CCAA), the State of California has determined the following pollutants to be pollutants of concern, and has designated CAAQS for each:

- Ozone (O₃)
- Carbon Monoxide (CO)
- Nitrogen Dioxide (NO₂)
- Sulfur Dioxide (SO₂)
- Particulate Matter with an aerodynamic diameter less than or equal to 10 micrometers (PM₁₀)
- Particulate Matter with an aerodynamic diameter less than or equal to 2.5 micrometers (PM_{2.5})
- Sulfates
- Lead
- Hydrogen Sulfide
- Vinyl Chloride

3

Also, another concern is the disposal of hazardous waste, under the California's Hazardous Waste Control Law.

4

In addition, will this be a shared cost? Residents of Oakland should not and will not solely bear the cost of the Terminal Modernization & Development project.

5

Shared Cost to include, but not limited to, the following counties:

- BAY AREA - Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, Sonoma.
- CENTRAL COAST - Monterey, San Benito, San Luis Obispo, Santa Cruz.

Thank you for your consideration of my comments.

6

Response to Commenter P-849

1. The commenter's opposition to the Proposed Project is acknowledged.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
3. **Sections 3.3** of the EIR discusses air quality. No significant air quality would occur as a result of the implementation of the Proposed Project.
4. **Section 3.8** of the EIR discusses hazardous material impacts. All hazardous waste would be transported and disposed of in accordance with local, state, and federal laws and policies relating to hazardous materials.
5. The Proposed Project would be funded through a combination of airline rates and charges, Airport Improvement Program grants, Passenger Facility Charges, and federal bonds.
6. The commenter's statement thanking for considering their comment is acknowledged.

Commenter P-850**Ruth Priest**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-851**Nora Privitera**

I do not support expansion of the Oakland International Airport, nor a name change. We are living in a time of climate crisis, and the expansion of the airport will greatly increase toxic emissions at a time when we should be doing everything to reduce them. The noise from the airport would also increase, impacting local residents. The proposed expansion is unnecessary, unwanted, and will result in more air pollution. Jet fuel is extremely toxic and difficult to decarbonize and spreads toxic pollution over a wide area. Thus, expansion of the airport in a time of climate is a very poor idea.

1 2

The proposed expansion would harm both the local community and the climate, and, no surprise, disproportionately impact the most vulnerable including lower income people and those with asthma or other respiratory disease. These communities are already much more impacted by industrial pollution than they should be.

3

California High Speed Rail and Brightline West will serve many of the airport destinations via high-speed rail. When these systems are complete, approximately 46% of the airport flights can be replaced by high-speed rail! Oakland and Port leadership need to be finding ways to cut carbon pollution, not locking in decades more of it. High speed rail is a much better alternative to expansion of the Oakland Airport.

4

As a long time resident of Oakland, and a frequent user of the airport, I strenuously object to this ill-conceived idea to expand the airport. This plan does not have the support of the Oakland community, and should not be built.

5

Response to Commenter P-851

1. The commenter's opposition to the Proposed Project is acknowledged.

2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.
4. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives .
5. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-852**Nora Privitera**

As a long time resident of Oakland I am in favor of modernizing the airport, especially if it can be made cleaner and more user friendly, but I am completely opposed to any effort to expand it.

1

Airplanes are significant emitters of greenhouse gas pollution and studies have shown that there are serious adverse health impacts in areas near airports. Residents near Oakland Airport are already impacted by the airport's emissions and should not have their health and safety further compromised by the proposed expansion. Oakland doesn't need to mimic San Francisco by having a mega airport in its midst.

2

The promise of additional jobs is an empty promise; many airport jobs are little more than thankless low paid drudgery.

3

In short, I urge you to put the community's health and safety first and refrain from expanding the airport on the empty promises of new jobs and a higher profile for Oakland.

4

Thank you for considering these remarks.

Response to Commenter P-852

1. The commenter's statement regarding being in favor of modernizing the airport is acknowledged
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Response to Commenter P-856

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.

7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-857**Judith Pruess-Mellow**

I am writing to let you know how concerned I am about this airport expansion. I worry a great deal about climate change, and air travel is responsible for a great deal of CO2 going into the atmosphere. Our lives in Alameda would be very negatively impacted. DO NOT EXPAND THE OAKLAND AIRPORT!!

1

2

Response to Commenter P-857

1. The commenter's statement regarding being concerned for the Proposed Project is acknowledged. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-858**Judith Pruess-Mellow**

I am very worried about the impact this expansion will have on climate change overall, and specifically on the health and well-being of us in Alameda. Vote NO on expansion!!!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-858

1. The commenter’s opposition to the Proposed Project is acknowledged. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. 11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-859
Judith J. Pruess-Mellow

I am very, very concerned about the negative impact this would have on Alameda in terms of pollution, traffic, and noise. I do not support this expansion at all.

1

2

Response to Commenter P-859

1. **Section 3.3, 3.11, and 3.13** of the EIR discuss air quality, noise, and traffic impacts, respectively. No significant air quality, noise, or traffic impacts would occur as a result of the implementation of the Proposed Project.
2. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-860
Jiaying Qian

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity.

1

2

With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

3

4

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births,

decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

5

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

6

7

Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

8

Response to Commenter P-860

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential

and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-862**Evelyn Quan**

The airplanes flying low over my house is causing me health problems. I have coughs more so since the planes fly over my house. It's also disrupting my sleep when they fly over at 3:00. Is not just 21 plane but many will follow.

You need to find another route for this expansion. It's not fair to homeowners over the proposed route!

1

Response to Commenter P-862

1. The commenter's statement regarding their health is acknowledged. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. **Appendix M** of the EIR provides information regarding sleep disturbance resulting from nighttime aircraft operations at OAK. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

Commenter P-863**Dan Quellet**

Air Pollution, additional noise, additional traffic, climate change (sea level will flood the North Field), The airport might be free of flooding but leaving & getting to the airport has not been solved.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

• Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4

For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-865**Dale Rachmeler**

The draft EIR for the OAK expansion is founded on the erroneous statement that demand for flights from OAK would occur even without the expansion, which greatly skews the findings of the EIR. The increased capacity would encourage more passengers and airlines would greatly increase the number of flights daily, causing ever more harm to surrounding communities that already suffer massive environmental injustice. The increased noise pollution and small particle emissions will harm the health and well being of families that are already coping with excessive traffic and port-induced pollution.

1

2

This EIR needs major revision and consideration of other scenarios for meeting demand for travel, especially for short-haul distances, which constitute the great majority of OAK flights and would be better served by high-speed rail. Has the climate crisis not yet convinced officials that we have to change our ways?

3

Response to Commenter P-865

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
2. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.
3. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.

Commenter P-866

Beatriz Ramirez

I'm 20 years old and I'm a junior in college. I really care about nature and its beauty. Nature also keeps communities healthy and thriving and I feel that the carbon emissions from airplanes impact communities the most that work, live, and go to school near airports.

1

I know it's possible to preserve land without risking communities so I find that expanding the Oakland airport is unnecessary. Please don't pollute the air and please don't expand the airport. Thank you.

2

Response to Commenter P-866

1. The commenter's statement regarding carbon emissions from airplanes impacting communities near airports is acknowledged.
2. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-867

Alvaro Ramos

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-869

Aaron Reaven

I'm a semi-retired science educator and consistent with many of the statements we've already heard this evening, I get a feeling of self-indulgence, self-justification from the Port's presentation. I am deeply disturbed to learn just this evening that the Port's

1

calculation of greenhouse gasses does not include or reflect a plane's greenhouse gas emissions while in flight between airports. That strikes me as a tremendous moral abdication. I am not opposed to modernizing the existing two terminals. It is very hard for me to believe that the construction of a third terminal would not invite and encourage increased flight travel.

2

So I want to invite the Port Commission to reverse field and exercise an active influence on the airline industry. Tell the airline industry that you will accommodate generous expansion of airport facilities just as soon as they do the hard scientific work to develop a carbon zero jet fuel.

3

Response to Commenter P-869

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement regarding not being opposed to the modernization of the existing terminals is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. In the past sixteen years, there have been four medium-hub airports (Indianapolis International, Jacksonville International, Louis Armstrong New Orleans International, and Sacramento International) that have opened passenger terminal buildings (see **Table P-4** in Global Response A: Aviation Forecast). The national number of enplanements is included in this table as a reference to show national trends in enplanements both before and after these four terminal buildings were opened. In comparing the number of passengers prior to and after the opening of the passenger terminal building, it is evident that there is no correlation between the construction of a passenger terminal building and an increase in annual enplanements. This data shows that the passenger terminal building is not of significance in determining the operations capacity of an airport. The demand for air transportation is a function of the socioeconomic conditions of the region served by the airport, not the attractiveness of a new passenger terminal building. The Proposed Project would accommodate forecast demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. The commenter's statement regarding inviting the Port to hold off on the Proposed Project until jet fuel is carbon zero is acknowledged. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.

Commenter P-870**Aaron Reaven**

I have recently been taking a serious interest in the airport expansion decisions being considered by the Port Commission.

1

I myself spoke at the August 15 meeting, and I appreciate the promptness with which you or your staff posted the recording of that hearing.

I was not able to attend the subsequent hearings on Aug. 30th. Speaking as an interested Oaklander, it would be helpful to view the recordings for those meetings. But as of today, they are still not available on your website.

Would it be possible for you to post those on the website soon?

Response to Commenter P-870

1. All records and transcripts of the public meetings are available at:
<https://www.oaklandairport.com/terminaldevelopment/>.

Commenter P-871**Leah Redwood**

The communities of East and West Oakland cannot be further sacrificed. We need to be reducing the harms to the health of the citizens here in the Bay Area, not increasing it.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

11

Response to Commenter P-871

1. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the

acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Response to Commenter P-881

1. For a discussion on carbon footprint, see Global Response G: Greenhouse Gas and Climate Change.
2. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on aircraft noise, see Global Response D: Noise.
3. **Section 3.4 and 3.9** of the EIR provide analysis of wetlands and hydrological impacts that would occur as a result of the implementation of the Proposed Project.
4. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
7. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
8. For a discussion of aircraft noise, see Global Response D: Noise.
9. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
10. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
11. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

12. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-882**Irene Riddle**

This extension makes no sense after the devastating past years of fires, extreme heat, flooding obviously caused by climate change. Air travel creates a huge carbon footprint and expansion within a major metropolitan area is foolhardy and dangerous to us all.

1

Response to Commenter P-882

- For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-883**Irene Riddle**

Carbon footprint	Noise in Neighborhoods	Fragile wet land area	1	2	3

13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-884

Irene Riddle

The increased air traffic and noise level will adversely affect wild life and human life. The increased carbon footprint will only add to the catastrophe of global warming. Expansion will perpetuate climate change and affect quality of life.	1	2
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	3	
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	4	
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	5

9. We have alternatives like remote business and conferencing.		
10. We need to shift towards climate-just transportation.		12

Response to Commenter P-884

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.

3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. 8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-889

1. **Section 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of the Proposed Project. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see

Appendix E). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 9. We have alternatives like remote business and conferencing.		
10. We need to shift towards climate-just transportation.	12	

Response to Commenter P-890

1. The future noise contours provided in **Section 3.11** are based on the continued use of these existing flight paths. No changes in flight paths or flight procedures would occur as a result of the Proposed Project. Further, the Proposed Project does not include any airfield changes at North Field. The only development proposed for the North Field is the North Field Lot for employee parking, which would have no effect on flight paths or procedures. See also Global Response B: Flight Paths and Procedures.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. **Chapter 3** of the EIR discusses environmental impacts that would occur as a result of the implementation of the Proposed Project.

3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. I am a resident of Berkeley, and I am strongly opposed to the expansion of Oakland International Airport. More flights will mean more pollution and more noise for the Bay Area, when we badly need less of both. Thank you. -Mike Roberts	1
	2

Response to Commenter P-893

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-894**Christina Robles**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

3. Aviation is hard to decarbonize and biofuels are not the answer.

4. It's too much noise. More Flights= More noise.

5. Sea level rise threatens shoreline development.

6. Labor rights are at stake.

7. Inequity: flying is an elite privilege with high costs for everyone else.

8. We have alternatives. Invest in Rail.

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

Response to Commenter P-894

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-895
Lorraine Robles

I don't have faith that the studies you claim have been conducted have been done in good faith! You used areas far from harbor bay to test the air and sound. You didn't look at schools and day cares in our area. The sound of current airplanes is unbearable now let alone if more gates are added. On days when the air is still, and planes have been taking off from the North field, my driveway reeks of the strong smell of diesel fuel exhaust. In 2005, when I began volunteering on our homeowner association landscape committee, I observed a light layer of small black soot particles covering the leaves of large shrubs scattered around the common areas. In the subsequent years that I have served as an association officer, some of the more than 20 HOAs on Bayfarm report the same findings, most certainly the associations adjacent to the South field runway approaches. More than one landscape contractor has identified the soot as exhaust particulates from the aircraft, and not fungus, mold, insects or other plant disease. The soot wipes off."I log up to 50 local miles per week on my bicycle, and during the pandemic noticed that the masks that I wore exclusively while bicycling showed signs of dirt from the outside air in just a matter of weeks. I also noticed that while wearing masks indoors and outdoors during the pandemic, I experienced no asthmatic episodes requiring inhaler doses."Our zip code has one of the oldest voting populations in the county, and a population more prone to adverse health impacts from air pollution: we have one large senior residential facility; 2 day-care facilities, 2 elementary schools and 1 private K-12 school."Bayfarmers live in a planned community with an abundance of outdoor recreational facilities: miles of walking, jogging and biking trails; bocce ball courts; a private fitness facility; (2) 18 hole and (1) 9 hole golf courses; numerous full-sized community swimming pools; tennis courts; 4 parks with baseball and soccer fields, basketball courts, play structures and tot lots, and picnic grounds. Anglers regularly fish on the slough and small boating craft ply the lagoons. The SF BayTrail runs through the zip code and we have a ferry terminal. " "With the SF Bay and the San Leandro Slough as our backyards, and a series of brackish water lagoons running throughout, we

1

have extraordinary birding and wildlife photographic activities with resident bald eagles, peregrine falcons, osprey, great blue herons, night herons, barn and great horned owls, migratory birds, Canada geese, brown pelicans, water fowl, song birds, and the like. Our extensive outdoor facilities regularly draws both residents and non-residents that exposes all to hazardous exhaust particulates from the airplanes."There is clearly more than aircraft exhaust that impacts the air quality in our zip code, but we should all be concerned about more accurately measuring the airplane generated air pollution; how this impact can be operationally mitigated even as the Port relies entirely on the excuse that it cannot regulate the exhaust from planes; and then expand the airport without regard to the added impacts of more plane exhaust? If the Port's hands are so tied, then the expansion Should be denied. Our health should not be attached to greed. There's no need for Oakland to have a bigger airport!!!

4

Response to Commenter P-895

1. The commenter's statement regarding not having faith in the studies conducted for the EIR is acknowledged. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion on aircraft noise, see Global Response D: Noise.
3. See responses to Comments #1 and #2 of this letter. **Chapter 3** of the EIR discuss environmental impacts and provides existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts.
4. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-896

Lorraine Robles

This is a horrible idea, don't be greedy. Not enough testing has been done. Our health is at risk.

8. We have alternatives. Invest in Rail. 9
9. We have alternatives like remote business and conferencing. 10
10. We need to shift towards climate-just transportation. 11

Response to Commenter P-896

1. The commenter's statement regarding the Proposed Project as a horrible idea and the amount of testing done is acknowledged. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental

Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-897

Response to Commenter P-897

1. The commenter's statement in support of the Proposed Project is acknowledged.

Commenter P-898

Michael Robleswong

I am a thirty year resident of Zip Code 94502. Planes taking off and landing from the North Field fly over my house. I am well past 65 years of age and an asthmatic. I read through the airport expansion proposal and surmise that the Port has no strategy to mitigate any negative air quality impacts on my family or on my Bayfarm neighbors. According to CLASS, the closest air quality monitors are located outside the airport more than 2 and 5 miles away respectively in the I-880 corridor. How can the Port possibly know the actual air quality, much less the amount and size of the most hazardous particulates from aircraft exhaust that Bayfarmers have been inhaling all these years?

1

On days when the air is still, and planes have been taking off from the North field, my driveway reeks of the strong smell of diesel fuel exhaust. In 2005, when I began volunteering on our homeowner association landscape committee, I observed a light layer of small black soot particles covering the leaves of large shrubs scattered around the common areas. In the subsequent years that I have served as an association officer, some of the more than 20 HOAs on Bayfarm report the same findings, most certainly the associations adjacent to the South field runway approaches. More than one landscape contractor has identified the soot as exhaust particulates from the aircraft, and not fungus, mold, insects or other plant disease. The soot wipes off.

2

I log up to 50 local miles per week on my bicycle, and during the pandemic noticed that the masks that I wore exclusively while bicycling showed signs of dirt from the outside air in just a matter of weeks. I also noticed that while wearing masks indoors and outdoors during the pandemic, I experienced no asthmatic episodes requiring inhaler doses.

Our zip code has one of the oldest voting populations in the county, and a population more prone to adverse health impacts from air pollution: we have one large senior residential facility; 2 day-care facilities, 2 elementary schools and 1 private K-12 school.

Bayfarmers live in a planned community with an abundance of outdoor recreational facilities: miles of walking, jogging and biking trails; bocce ball courts; a private fitness facility; (2) 18 hole and (1) 9 hole golf courses; numerous full-sized community swimming pools; tennis courts; 4 parks with baseball and soccer fields, basketball courts, play structures and tot lots, and picnic grounds. Anglers regularly fish on the slough and small boating craft ply the lagoons. The SF BayTrail runs through the zip code and we have a ferry terminal.

With the SF Bay and the San Leandro Slough as our backyards, and a series of brackish water lagoons running throughout, we have extraordinary birding and wildlife photographic activities with resident bald eagles, peregrine falcons, osprey, great blue herons, night herons, barn and great horned owls, migratory birds, Canada geese, brown pelicans, water fowl, song birds, and the like. Our extensive outdoor facilities regularly draws both residents and non-residents that exposes all to hazardous exhaust particulates from the airplanes.

There is clearly more than aircraft exhaust that impacts the air quality in our zip code, but we should all be concerned about more accurately measuring the airplane generated air pollution; how this impact can be operationally mitigated even as the Port relies entirely on the excuse that it cannot regulate the exhaust from planes; and then expand the airport without regard to the added impacts of more plane exhaust? If the Port's hands are so tied, then the expansion should be denied.

3

Response to Commenter P-898

1. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

2. The commenter's statement regarding their experience with aircraft exhaust is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-899

Michael Robleswong

The DEIR does not contain credible baseline data (noise, air pollution, light pollution, and traffic congestion) gathered from within the boundaries of Bayfarm or the main island of Alameda, over which there will be overflights from planes taking off and landing from the North Field, and additional traffic impact from relocating and expanding parking and other terminal facilities onto and around the Ron Cowan corridor.

1

As such, any analysis and projection of impact to the health and safety of Alamedans is entirely without credibility as well. The Port of Oakland should delay the comment period for the DEIR another 18 months in order to install noise, air quality, light pollution and traffic congestion monitors which can scientifically collect such data for a 12 month period of time.

2

Given that the flight paths over Bayfarm and the main island from the North Field will fly over the San Leandro Slough, a careful monitoring of the flight patterns of so many large migratory birds that visit this area and the wildlife reserves therein would also be prudent. A single bird strike by a plane lifting off or landing near the Bayfarm bridge would be catastrophic.

3

Such data can be analyzed and projections made, the summary of which can be used to revise the Port's DEIR, and to go through another comment period.

Response to Commenter P-899

1. The commenter's statements regarding perceived impacts of the Proposed Project is acknowledged. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK.

The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

2. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
3. **Section 3.4** of the EIR provides an analysis of the biological resource impacts that would occur as a result of implementation of the Proposed Project. Wildlife strikes could continue to occur regardless of the Proposed Project. No new runways would be constructed and thus there would not be any new lines of potential wildlife interference. Additionally, the Port's WHMP (2016) describes wildlife control procedures to discourage and remove potentially hazardous wildlife from the airfield. It emphasizes the identification and abatement of wildlife hazards within the airfield environment and describes the management of habitat in a manner that is non-conducive to hazardous wildlife. The WHMP would remain in place to address wildlife strikes and would continue to be implemented.

Commenter P-900**Paul Robson**

flights are flying over the house day and night creating very loud noise. Residents are affected big time. It causes health issues, especially for seniors and heart condition patients. Also, more flights means more air pollution.

1
2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-902

Hugh Roman

I live in Oakland and I'm in the eighth grade.. I care about the environment and I'm concerned about our air quality in the Bay Area.. Expanding Oakland airport and adding 16 new terminals would significantly worsen the air quality across Oakland and its adjacent cities affecting everyone's health.

1

Planes are the most polluting means of transport and the ones that generate the most amount of greenhouse emissions and contribute to the severe climate crisis we already have.. Instead, we should invest in a more sustainable public transit network such as rail.. Please stop expansion of Oakland airport.. Thank you.

2

3

Response to Commenter P-902

1. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical

infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

2. The commenter's statement regarding planes being the most polluting means of transport is acknowledged. For a discussion on greenhouse gas, see Global Response G: Greenhouse Gas and Climate Change. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.
3. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-903

Sam Romano

Oakland's airport is an almost perfect size.
 The number of flights have not poisoned Oakland too much yet.
 You can drive in, park and fly out without too much craziness.
 Has anyone gone to SF's airport?
 It's crazy, traffic, impossible parking, chaos inside.
 At a time in this period of human existence on this planet, when we need to remove fossil fuels, stop global expansion, some entrepreneurs want to expand our airport.
 Remember the fight we've had stopping coal from going through Oakland.
 They think we are stupid, weak, unable to see through the smoke they throw up to blind us.
 STOP THE AIRPORT EXPANSION!

1

Sam Romano

Oakland resident since 1978!

Response to Commenter P-903

1. The commenter's statement regarding OAK being the perfect size and opposition to the Proposed Project is acknowledged.

Commenter P-904

Kirsten Rommel

Please see my comments on the draft EIR below. As a resident of Bay Farm, Alameda, I am very concerned about the expansion of Oakland Airport.

1

- *Page 100 of the EIR discusses ambient air quality standards and how the surrounding Airport area does not meet standards for pollutants PM10 and PM2.5.18.*
- What type of mitigation measures is the Port of Oakland taking to reduce the levels of PM10 and PM2.5.18? Since these metrics do not meet the ambient air quality standards, what is the Port doing to ensure the surrounding community is not placed at risk for cancer or other diseases?

- *Page 102 of the EIR states, "ODOR As identified in the Initial Study that was included with the Notice of Preparation (NOP), the Proposed Project would not result in any change in the types of aircraft operations that would occur at OAK. Therefore, the Proposed Project would not result in any odors or emissions that would affect a*

2

3

- substantial number of people and no further analysis of this issue will be included in the Draft EIR."*
- Doesn't the frequency of flights impact the concentration levels of environmental odor? Why is this not detailed in the impact report?
- *Page 110 states that "the monitoring station closest to the Proposed Project is the Oakland East station, located approximately three miles northeast of the Airport"*
- Why are there not any monitoring stations within the residential communities of Bay Farm Island? Residents of the community are most impacted by the pollutants coming from OAK airport.
- *Page 437 of the EIR addresses alternatives to an Oakland Airport expansion, with developing a new airport site in the region as an option*
- Can the report explore in greater detail the concept of restricting growth at Oakland Airport and developing another airport somewhere else in the Bay Area region (such as in [Solano county](#))?

4

5

Response to Commenter P-904

1. The commenter's statement regarding being concerned about the Proposed Project is acknowledged.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
3. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
4. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
5. **Chapter 4** of the EIR provides a discussion of alternatives to the Proposed Project, including a No Project Alternative, which is considered to be an alternative to the

Proposed Project in conformance with Section 15126(d) of the CEQA Guidelines. The EIR evaluates alternatives to accommodate the increase in enplanements and aircraft operations that would occur with or without the implementation of the Proposed Project. Each alternative is analyzed for the ability to meet most of the basic project objectives while avoiding or lessening significant environmental effects. Thus, the EIR identifies and analyzes the range of alternatives available to the Port. See also Global Response I: Alternatives.

Commenter P-905

Lee Rosen

Beyond the general environmental reasons, I and my family will be directly affected by the additional noise pollution as we live adjacent to the airport and it seems that the limits on noise that were in place when we moved in have been eroded and/or enforcement weakened, as I hear more noise than ever in recent times. As someone that prefers to fly out of Oakland when I do travel, I would normally welcome improved service, but if the cost is increased noise, pollution and climate effects for the vast majority of my time here compared to when that convenience is realized, my sentiment is "No, thank you!"

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- 3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- 4
3. Aviation is hard to decarbonize and biofuels are not the answer.
- 5
4. It's too much noise. More Flights= More noise.
- 6
5. Sea level rise threatens shoreline development.
- 7
6. Labor rights are at stake.
- 8
7. Inequity: flying is an elite privilege with high costs for everyone else.
- 9
8. We have alternatives. Invest in Rail.
- 10
9. We have alternatives like remote business and conferencing.
10. We need to shift towards climate-just transportation.
- 11

Response to Commenter P-905

1. The commenter's opposition to the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft

types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged

Commenter P-906**Margaret Rosen**

The noise pollution here in Alameda is already significant and this expansion will make it overwhelming.	1

I'm mostly concerned about the incredibly high climate impacts of aviation. We should instead be investing in rail and figuring out how to transition to alternatives to flying wherever possible.

Commenter P-915**Dennis Rowcliffe**

The Oakland airport is plenty large as it stands and we, the residents living in the surrounding area, would suffer the worst of the negative effects that would be caused by this airport being the locus for many more takeoffs and landings at that airport. The damage we've already done to the climate and natural resources is quite obvious now; if this project goes ahead it promises to make those effects worse and more pronounced in the humans who are directly affected. Many of those people don't fly anywhere and don't plan to, so it doesn't help them to have more planes flying in and out of that airport. Please kill this project. Lives and health outcomes depend on NOT proceeding with this project.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-915

1. The commenter's opposition to the Proposed Project is acknowledged. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. Commenter P-916**Rachel Rowland**

We should be focusing on rail transit and more fuel efficient and less polluting forms of transit, not expanding OAK!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-916

1. The Port does not have the authority to require air travelers to use other modes of transportation. See also Global Response I: Alternatives.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.

9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-917**Terrance Rowson**

Noise and air pollution are at unacceptable levels currently. expansion will make it unlivable in Alameda and surrounding communities.	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-917

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.

• We need to shift towards climate-just transportation.	11

Response to Commenter P-918

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-921**Robert Russo**

I fly out of OAK frequently and am a resident of the nearby Casitas HOA. I agree upgrades are necessary but I strongly encourage that triple-paned windows be provided for the neighboring communities that are affected by the flight path.

1

Also, if the number of flights expand, could OAK limit the time? It would be ideal if flights didn't arrive/leave before 6am or after 10pm? Is the possibility of reconfiguring takeoff and landing to occur over uninhabited areas?

2

Finally, could noise abatement strategies such as the takeoff practice that is utilized in SNA be applied at OAK?

3

4

Response to Commenter P-921

1. The commenter's statement regarding support for upgrades at the airport is acknowledged. Part 150 Noise Compatibility Program abatement measures, such as window replacements, are outside the scope of the Proposed Project and are not discussed at this time. See also Global Response D: Noise.
2. Due to the Airport Noise and Capacity Act (ANCA), the Port cannot adopt new noise rules to reduce aircraft noise or restrict aircraft access at OAK. Only the FAA can enact operational restrictions on aircraft to reduce aircraft noise. See Global Response D: Noise.
3. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
4. The noise abatement program at John Wayne Airport in Orange County, California was implemented prior to the passage of the Airport Noise and Capacity Act (ANCA). Due to ANCA, the Port cannot adopt new noise rules to reduce aircraft noise or restrict aircraft access at OAK. Only the FAA can enact operational restrictions on aircraft to reduce aircraft noise. See Global Response D: Noise.

Commenter P-922**Robert Russo**

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-927
Hope Salzer

After the Oakland airport was allowed to alter flight paths, overhead airplane noise has become noticeably worse and planes are seemingly allowed to depart or land well after midnight. The airplane engine noise is a major sleep disrupter and needs to be curtailed.

1

Additionally, the last thing our economy needs, long-term, is to expand a very Carbon-emission intensive industry in a low-lying location that may very well be adversely impacted by sea-level rise and increasing storm surge/severity? so that those new transportation assets may have a shorter than normal life span and become ?stranded assets?. It?s not a prudent use of taxpayer money and is likely to exacerbate externalized costs to society.

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

3

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

Response to Commenter P-927

1. The commenter's statement regarding flight paths and overhead noise is acknowledged. For a discussion on aircraft noise, see Global Response D: Noise.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-928**Hope Salzer**

The noise from Oakland airport's traffic already negatively effects my family's sleep, our air quality, and our quality of life. OAK is also located where sea level rise and other climate disruption may make it a non-viable location. Until aviation is carbon-neutral, we should be doing everything we can to reduce air travel. Expanding airports is NOT the investment we need to be making right now. After the Oakland airport was allowed to alter flight paths, overhead airplane noise has become noticeably worse and planes are seemingly allowed to depart or land well after midnight. The airplane engine noise is a major sleep disrupter and needs to be curtailed. Additionally, the last thing our economy needs, long-term, is to expand a very Carbon-emission intensive industry in a low-lying location that may very well be adversely impacted by sea-level rise and increasing storm surge/severity so that those new transportation assets may have a shorter than normal life span and become stranded assets. It's not a prudent use of taxpayer money and is likely to exacerbate externalized costs to society.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

5

31. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

6

32. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

7

33. Aviation is hard to decarbonize and biofuels are not the answer.

8

34. It's too much noise. More Flights= More noise.

9

35. Sea level rise threatens shoreline development.

10

36. Labor rights are at stake.

11

37. Inequity: flying is an elite privilege with high costs for everyone else.

12

38. We have alternatives. Invest in Rail.

13

39. We have alternatives like remote business and conferencing.

40. We need to shift towards climate-just transportation.

14

Response to Commenter P-928

1. The commenter's statement regarding being negatively affected by airport noise is acknowledged.
2. The commenter's statement regarding sea level rise and reducing air travel is acknowledged. For a discussion on sea level rise, see Global Response G: Greenhouse Gas and Climate Change. With respect to reducing air travel, the Port does not have the authority to require air travelers to use other modes of transportation.

3. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
4. The commenter's statement regarding the Proposed Project not being a prudent use of taxpayer money is acknowledged.
5. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
8. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
9. For a discussion of aircraft noise, see Global Response D: Noise.
10. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
11. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
12. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
13. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. Commenter P-937
Marilynn Schneller

I've lived in Alameda for 32 years and it took us a while to get used to the sound of the airplanes. Recently, the airplanes are so close and very loud. I can even hear it with all of my windows and doors closed. If you expand the airport, it will make it unbearable for all of us who live in Alameda. we are opposing expansion of the airport because of all of the noise. Please do not let him build the extension because it would be unbearable to hear all of the airport traffic all night long! I also have a husband who is very sick and the noise from the airplanes wakes him up because the airplanes are so loud when they fly over our house.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.

9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-937

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives,

and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-938

Becca Schonberg

I live in Berkeley and I strongly oppose the expansion of the Oakland airport. The damage we have done to the climate from burning fossil fuels is already likely irreparable. We need to find ways to support the local economy and people who live here without relying on burning ever more fossil fuels. It's that simple. The gains from the airport expansion will go to the few while the burdens of increased pollution locally and globally will be borne by front-line communities, poor people, and people of color. The jobs created locally by the expansion will be mostly low-wage work and will come with significant health burdens to the workers. There are so many other ways we can invest locally -- in things like high-speed rail, for example. All of the Bay Area is by definition along the coastline and we will pay the price directly for foolishly continuing down the path of an extractive economy. Please reconsider this plan as organizations like 350 Bay Area are urging you to do.

Response to Commenter P-938

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The commenter's statement regarding finding ways to support local economy without burning fossil fuel is acknowledged. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.
3. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of

aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

4. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-939

Rebecca Schonberg

Expanding air travel will do more harm than good. We need to invest in a green economy and create jobs that do not carry such heavy costs in terms of heating up our planet.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-939

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. The commenter's statement regarding investing in a green economy is acknowledged. See also see Global Response G: Greenhouse Gas and Climate Change.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-945**Thomas Scruggs**

In the East Bay we are already subjected to too many flights so close to our homes. No more pollution is needed. I know how the sound of jets can disturb one's life, I grew up in Millbrae and we suffered from all the noise out of SFO. Do not inflict this on more people. And the environmental impact will be very bad.

Response to Commenter P-947

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental

Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-948

Oakland routes departure planes directly over San Mateo low and loud - they fail to track them on their flight track website - they are dishonest and unapologetic about these flights and let SFO take the heat for what the traffic controllers call the candle and stick routes- the pollution needs to stop- why does the airline industry get a pass on pollution?

Commenter P-953**Joseph Servin**

I am deeply concerned with the noise level and pollution level that this will cause for our home and neighbors. Just today it smelled strongly of jet fuel and gave me a headache. When the planes change air fields due to maintenance the airplanes flying over our homes are too loud and it sounds as if one is about to crash. Please do not move forward with this.

1

2

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-958**Susan Shauf**

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity.

1

2

With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

3

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

4

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

5

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens. Please do not approve the expansion proposal until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

Response to Commenter P-958

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provides an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter’s statement regarding the City of Alameda is acknowledged.
8. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.

Commenter P-959

Philip Shaw

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

1

2

• Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	3
• Aviation is hard to decarbonize and biofuels are not the answer.	4
• It's too much noise. More Flights= More noise.	5
• Sea level rise threatens shoreline development.	6
• Labor rights are at stake.	7
• Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	10

Response to Commenter P-959

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and

conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-961

Nancie Shelden

The proposed expansion will have an extremely negative impact on thousands of homes and many more citizens. I am very concerned about noise and air pollution, environmental impact, potential disaster if a plane went down. I also feel that there has been a lack of effort to work with the actual residents of the area to hear/address issues and concerns. I strongly oppose the proposed expansion, and question the need for it in a region (east bay) that is already built out without much room for increased homes/passengers going forward. I am fine with a modernization of the existing facility but not the addition of enlarged terminals.

9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	13

Response to Commenter P-961

1. The commenter's statement regarding perceived impacts of the Proposed Project and concern for plane crashes is acknowledged. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. **Chapter 3** of the EIR discusses environmental impacts and provides existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts. Airport operations at OAK meet all required safety standards of the Federal Aviation Administration.
2. **Chapter 6** of the EIR provides information regarding public outreach associated with the publication of the Draft EIR.
3. The commenter's opposition to the Proposed Project and questioning its need is acknowledged. **Chapter 4** of the EIR provides a discussion of alternatives to the Proposed Project, including a No Project Alternative, which is considered to be an alternative to the Proposed Project in conformance with Section 15126(d) of the CEQA Guidelines. The EIR evaluates alternatives to accommodate the increase in enplanements and aircraft operations that would occur with or without the implementation of the Proposed Project. Each alternative is analyzed for the ability to meet most of the basic project objectives while avoiding or lessening significant environmental effects. Thus, the EIR identifies and analyzes the range of alternatives available to the Port. See also Global Response I: Alternatives. Any alternatives that contemplated fewer gates and corresponding holdrooms and passenger processing facilities than identified for the Proposed Project would not meet the level of service criteria because it would not provide OAK with industry standard levels of service and, therefore, were not considered for further evaluation in the EIR. The EIR includes a reasonable range of alternatives to the Proposed Project. Also see Global Response I: Alternatives.
4. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

6. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. 9. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
10. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
11. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
12. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-962**Bhima Sheridan**

I had all kinds of great ideas for my speech. I didn't write anything down so since I'll ad lib I apologize but I'd like to go on record as opposing this expansion at the moment. I'm a businessman, I'm a realtor, I'm a landlord in Berkely and Oakland. I recognize the importance of business and I'll be honest a lot of my customers arrive through your airport but I'm also a scientist by training and I recognize what's happening to our climate and I'm concerned about the high altitude of affects of burning hydrocarbons in our troposphere.

1

I don't really buy your argument that there's hordes of would be air travelers who will rush your gates regardless of whether you expand or not. I think you guys have the legal and moral authority maybe not to regulate scope three emissions but to stand up and to consider our future. I think we have a climate emergency, 99.9 percent of climate scientists agree, and the .1 percent are in the employ of fossil fuel companies.

2

3

4

I'd like to ask one question and that is how hot does it have to get? When are we going to stop, like when your house burns? So coming back we just watched a tropical paradise burn. We can't blame that on the Port of Oakland but I think we need to connect the dots and burning more fossil fuels is not going to make it any better. In fact, it will make it worse. Thank you for listening today.

Response to Commenter P-962

1. The commenter's opposition to the Proposed Project is acknowledged. For a discussion on greenhouse gas emissions, see Global Response G: Greenhouse Gas and Climate Change.
2. The Proposed Project is intended to better accommodate the forecast market demand in aircraft operations and enplanements.

The EIR identifies impacts that could occur but that the Port does not have the authority to control. These impacts are generally associated with aircraft operations. While OAK is subject to the regulatory authority of the FAA and TSA, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

In the past sixteen years, four medium-hub airports (Indianapolis International, Jacksonville International, Louis Armstrong New Orleans International, and Sacramento International) opened new passenger terminal buildings (see **Table P-4** in Global Response A: Aviation Forecast). The national number of enplanements is included in this table as a reference to show national trends in enplanements both before and after these four terminal buildings were opened. In comparing the number of enplaned passengers prior to and after the opening of the passenger terminal building, it is evident that there is no correlation between the construction of a passenger terminal building and an increase in annual enplanements at the same airport. This data shows that the passenger terminal building does not increase passenger demand at an airport. The demand for air transportation is a function of the socioeconomic conditions of the region served by the airport, not the attractiveness of a new passenger terminal building. The Proposed Project would accommodate forecast demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.

3. The commenter's statement regarding the Port having the legal and moral authority to stand up and consider the future is acknowledged.
4. The commenter's statement regarding climate change and burning fossil fuels is acknowledged. See also Global Response G: Greenhouse Gas and Climate Change.

Commenter P-963**Bhima Sheridan**

Flying is the single most damaging mode of travel mile for mile and most of our trips are for leisure. We owe it to our great grandchildren to keep our climate livable. At the rate we are going, we are facing our own extinction if we don't reign in our emissions.

Commenter P-966
Django Sheridan

I oppose this because it will lead to an increase in air travel which is a major contributor to the climate emergency.

1

Response to Commenter P-966

1. The commenter's opposition to the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-967
Gjango Sheridan

I'm a 16-year-old Berkeley High student and I'm here in opposition of the airport because of its contribution to the climate crisis.. When I was at school today I noticed that the air quality was pretty bad, it was smoky.. It was one of the many reminders that I get daily that I may not have a future.. Expanding the airport whether you want to take responsibility or not will allow for more air travel which is a major greenhouse gas emitter.. Trying to

1

2

calculate construction-related emissions is pennies on a dollar compared with airplane emissions.

You say you're just meeting the projected increased demand of passengers but for one I know your projections aren't taking the climate crisis into account.. The future is extremely unpredictable right now due to the climate crisis so trying to predict that 24.7 million passengers are going to be flying from the Oakland airport in 2038 is irresponsible.. The fires in Hawaii and the hurricane in Los Angeles are prime examples of this unpredictability.. Ironically those places are some of the most popular destinations that the Oakland airport serves.

3

Also, California is trying to cut emissions in half by 2030 so this is going in the complete wrong direction.. Instead of planning for a normal future we need to be mitigating our unsustainable practices in order to have a future.. Aircraft operation emissions are avoidable by not doing this project.. Thank you.

4

Response to Commenter P-967

1. The commenter's opposition to the airport is acknowledged.
2. The commenter's statement regarding air quality is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. The commenter's statement regarding the unpredictability from the climate crisis is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. The commenter's statement regarding air quality is acknowledged. See response to Comment #2 of this letter.

Commenter P-968

Twyla Sheridan

I'm 12 years old and in seventh grade.. I care about this because I want to be alive in ten years and with the way things look now that may not be possible.. Like Hurricane Hillary; we're seeing really weird weather and it's just getting worse because of all the harmful businesses that want money and who can say no to mullah?.. I can if my life is on the line.

1

Businesses can use their money to provide things that are good for the planet like electric cars.. I know it's easier said than done but the more we wait the harder, harder, harder,

harder it will be to make those changes so I say let's start now by keeping the airport small.. Thank you.

Response to Commenter P-968

1. The commenter's statement regarding weird weather, climate change, ways businesses can use their money for things that are good for the planet, and wanting to keep the airport small is acknowledged.

Commenter P-969

Susan Sherk

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-969

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental

Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-970

Catherine Sherrer

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

1

2

3

4

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show

the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

5

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

6

7

Please do not approve the expansion proposal until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

8

Response to Commenter P-970

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No changes in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provides an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport

worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The commenter's statement opposition to the Proposed Project is acknowledged.

Commenter P-971

For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-981**Kira Silverman**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

1

2

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	3
3. Aviation is hard to decarbonize and biofuels are not the answer.	4
4. It's too much noise. More Flights= More noise.	5
5. Sea level rise threatens shoreline development.	6
6. Labor rights are at stake.	7
7. Inequity: flying is an elite privilege with high costs for everyone else.	8
8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Response to Commenter P-981

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.

<ul style="list-style-type: none"> • We need to shift towards climate-just transportation. 	11

Response to Commenter P-984

12. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively, that would occur as a result of the implementation of the Proposed Project. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

13. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
14. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Commenter P-986

Jessica Sims

The effects of the expansion on the Bay Farm and Alameda community have not been properly assessed. The negative effects on the community far outweigh the benefit of allowing more flights in and out of Oakland. There are already 3 major airports within a very small area. We do not need greater capacity for this airport.	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3

Response to Commenter P-986

1. The commenter's statement regarding perceived impacts of the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast. **Chapter 3** of the EIR provides an analysis of environmental resource impacts that would occur as a result of the implementation of the Proposed Project.
2. The commenter's statement regarding not needing greater capacity at OAK is acknowledged. The Proposed Project does not result in additional aircraft operations.

The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service.

3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental

Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-991

Michael Skolnick

As a long time resident of Alameda on both bay farm and the main island I can unequivocally state that airplane noise adversely affects quality of life. When living on bay farm close to the flight pattern we would have to pause conversations, tv shows and hope the kids didn't wake up when sleeping and that is during normal operating hours.

The noise is excruciating and infuriating when FedEx flyouts out at 2am - 4am on certain days, there is just no way to maintain sleep when those big planes take off. I know they are not supposed to take off then and I would file a complaint but the minimal fine for taking off during "closed" hours means nothing to them. I moved away from bay farm to the main island to get away from that and now I see the new flight path would go over all of Alameda. This is BAD for our city and residents.

1

Response to Commenter P-991

1. The commenter's statement regarding airplane noise affecting quality of life and the difficulty of maintaining sleep is acknowledged. **Appendix M** of the EIR provides information regarding sleep disturbance resulting from nighttime aircraft operations at OAK. For a discussion of flight paths, see Global Response B: Flight Paths and Procedures.

Commenter P-992**Steve Slater**

As a long-time Alameda resident, and one with school-age children, as well as someone who occasionally travels via Oakland Airport, I am deeply concerned about the proposed airport expansion and urge the Port of Oakland to conduct further analysis and reconsider this proposal. Modernization to ensure that terminals meet industry standards to safely, effectively accommodate travelers and employees is important and reasonable; however, expansion is an entirely different matter that has serious implications for local communities and climate change. The plan prioritizes airport economics above public health and the environment, which is disappointing and alarming.

1

The Draft EIR analyses do not appropriately consider environmental impacts of expanded services, for local community noise and public health impacts and climate change contributions. The studies should be expanded to thoroughly consider all the scenarios for proposed expansion including the lived experiences of local residents as described herein.

2

Communities like mine that neighbor Oakland Airport or are located under its flight paths are already experiencing major noise impacts, and proposed flight paths under the EIR scenarios are unclear. The current occasional use of the North Field runway by commercial airlines already places great strain on Bay Farm residents, and this will very likely increase with airport expansion – either routinely as part of daily operations or when the main runway needs more regular repairs given its increased use. Intense ongoing noise creates sleep problems, increased stress, interferes with normal conversations, and is linked to heart disease. Our communities deserve to live without increased noise pollution.

2

Additionally, serious health effects occur from particulate matter emitted from airplanes during takeoff and landing, most impacting communities that live, work, and go to school near the airport. An increase in ultra-fine particles has a huge impact on the air quality and health of communities extending in a 10-mile long plume along the landing and take-off flight paths. This has not been adequately studied in the Draft EIR.

3

In addition to serious local impacts, an Oakland airport expansion will be a direct contributor to global warming more broadly. The Port of Oakland should conduct a comprehensive accounting of greenhouse gas emissions, including flight emissions, and develop a plan to reduce them substantially by 2030, not increase them. There is also an opportunity to advance alternative modes of transportation, like rail. Or, alternately, this airport expansion can wait until there are environmentally sustainable solutions to support greener flying.

4

5

Economics and market demand are clearly identified in the Draft EIR as the drivers of this proposed expansion, without adequate consideration of community or climate change impacts. This is how we, the collective humanity, find ourselves in a global predicament in which financial profit is valued above the health of people and nature. I choose to live in the Bay Area because of our longstanding values of social justice and environmentalism, and I urge the Port of Oakland to embrace and live up to these values. It's difficult to put into words my anxiety and fear for the wellbeing of my children, family, and community if this proposed expansion were to move forward. I ask the Port of Oakland to change the plan. For local community members living near the airport, it genuinely feels like a sentencing to

6

poorer health, overall environmental degradation, and added economic hardship as property values decrease.

Response to Commenter P-992

1. The commenter's statement urging the Port to conduct further analysis and reconsider the Proposed Project is acknowledged. **Chapter 4** of the EIR provides a discussion of alternatives to the Proposed Project, including a No Project Alternative, which is considered to be an alternative to the Proposed Project in conformance with Section 15126(d) of the CEQA Guidelines. The EIR evaluates alternatives to accommodate the increase in enplanements and aircraft operations that would occur with or without the implementation of the Proposed Project. Each alternative is analyzed for the ability to meet most of the basic project objectives while avoiding or lessening significant environmental effects. Thus, the EIR identifies and analyzes the range of alternatives available to the Port. See also Global Response I: Alternatives. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. **Chapter 3** of the EIR provides analyses on environmental resource impacts that would occur as a result of the implementation of the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion on aircraft noise, see Global Response D: Noise.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
4. For a discussion on greenhouse gas emissions, see Global Response G: Greenhouse Gas and Climate Change.
5. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project

Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

6. The commenter's statement regarding considering the community and climate change impacts is acknowledged. **Chapter 2** of the EIR provides the objectives of the Port for the Proposed Project. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR. See also Global Response E: Environmental Justice and Community Engagement.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

Commenter P-993

Peter Smalley

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.
8. We have alternatives. Invest in Rail.
9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.	10

Commenter P-998**Justin Smith**

It would be great to understand the economic impact of the project and expansion to the local community

1

Response to Commenter P-998

1. The Port has invested substantial resources in EJ and climate change-related initiatives to tangibly improve the quality of life for Oakland residents and adjacent communities. The Port's extensive community engagement efforts with neighboring residents and community-based organizations have resulted in a variety of coordination and collaboration initiatives. To broaden the Port's reach into the community, additional engagement and education efforts have been targeted towards the Port's fence-line communities to include residents, local businesses and individuals that work in these neighborhoods. The Port has partnered with several well-regarded community-based organizations (CBOs) to improve its outreach to disadvantaged communities. These organizations were selected based on their dedication to disadvantaged communities including those who work with individuals with limited-English proficiency (LEP) and based on their proven experience working on issues such as public health, health equity, environmental health, environmental justice, social justice, racial equity, youth development or senior services.

The Port also continues to seek funding opportunities that will have direct benefits to the communities. See also Global Response E: Environmental Justice and Community Engagement.

Commenter P-999**Sean Smith**

Response to Commenter P-1001

1. The commenter's statement regarding reducing fossil fuel-based transportation is acknowledged. **Section 3.3, 3.11, and 3.13** of the EIR discuss air quality, noise, and traffic impacts, respectively. No significant air quality, noise, or traffic impacts would occur as a result of the implementation of the Proposed Project.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1002**Tom Smith**

It is absolutely imperative that we reduce, not increase, fossil fuel based transportation. Use existing gates more efficiently. Bay area already has poor air quality. Please don't add more air pollution, noise pollution, and more traffic. Don't add more OAK traffic.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-1002

- The commenter's statement regarding reducing fossil fuel-based transportation is acknowledged. **Chapter 4** of the EIR provides a discussion of alternatives to the Proposed Project, including a No Project Alternative, which is considered to be an alternative to the Proposed Project in conformance with Section 15126(d) of the CEQA Guidelines. The EIR evaluates alternatives to accommodate the increase in enplanements and aircraft operations that would occur with or without the

implementation of the Proposed Project. Each alternative is analyzed for the ability to meet most of the basic project objectives while avoiding or lessening significant environmental effects. Thus, the EIR identifies and analyzes the range of alternatives available to the Port. See also Global Response I: Alternatives.

Section 3.3, 3.11, and 3.13 of the EIR discuss air quality, noise, and traffic impacts, respectively. No significant air quality, noise, or traffic impacts would occur as a result of the implementation of the Proposed Project.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1003**Deirdre Snyder**

This expansion flies in the face of the realities of climate change. Aside from the problems of rising sea levels flooding the runways, it is irresponsible to charge head on into climate disaster. It would be better to revive the coastal railway than to insist on this final step over the edge to climate disaster

I do not believe that there has been adequate assessment of harm's to those of us who live in Alameda and will.suffer the additional air and noise pollution. This needs to be assessed before the expansion can be improved.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Response to Commenter P-1006

1. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

I am on Alameda City Council, I'm the former mayor, I'm co-chair of the Airport Noise Forum.. I want to share that this issue will be coming to Alameda City Council on September 5th.. We do not have meetings in August so that is our next meeting.. The agenda should come out in the end of August approximately the 24th.. You can be watching. It's all on line.. If you want to email City Council you can email "CityCouncil-list," L-I-S-T, "@AlamedaCA.gov.." You can come and speak in person at our meeting on September 5th.. You can also Zoom in so we do it both ways.

1

And I want to share now that this is my personal comments.. I serve on the Airport Noise Forum because I get a lot of complaints about noise. I did it while I was mayor and I'm a former mayor. I served on that committee.. We do a -- we do not get paid for serving on that committee.. I have done it now that I'm back on City Council and there was a comment earlier in regards to there are current impacts.. There are current impacts.. I want to thank everyone that is here from the Port because we do have our quarterly meetings and many of the people that attend the meetings on behalf of the Port are here this evening and I want to thank each of them because they have been working with us over years to try to address this noise issue and the impacts of noise and the impacts of next gen on that of having planes fly over your home over and over again. I want to recognize the clock that I, if there's another opportunity to weigh in to get out Council to weigh in.. Thank you all.

Response to Commenter P-1009

1. The commenter's statement regarding the Alameda City Council meetings and receiving noise complaints while serving on the Airport Noise Forum is acknowledged.

Commenter P-1010
Trish Herrera Spencer

I'm a former mayor of the City of Alameda.. I also am the co-elected leader chair of the Airport Noise Forum.. I'm speaking today in my individual capacity.. I want to thank the Port for expanding the time to respond to the EIR. I think that's very, very important.. The matter is coming to the Alameda City Council.. It was going to come on the 5th.. I think it's being extended so those of you that want to participate in that can watch the agenda.

1

I want to speak in regards to the substance of the expansion.. The numbers are actually hard for me to figure out what we're really talking about but what has been shared by the Port is the passenger increase from the base year of 2019, 13.4 million, and an anticipated increase to 24.7 million in 2038 which is an 84 percent increase in passengers.. The belly cargo increase almost 10,000 tons to approximately 25,000 tons a 154 percent increase.

2

When I asked the questions in regards to how many more flights that would actually look like, I can't find that.. I want to know -- I'm looking for you know how many more flights are we anticipating and what will the hours be then because we already know flights are going off earlier in the morning than they used to be and then we could actually try to figure out if we're having a double or a triple increase in the number of planes then how does that impact our air quality and the noise and noise does impact health.

All the back bin monitors in the EIR none of them are on in Alameda.. They're in Oakland West, East, Laney College.. How do we get the monitors closer to the airport so we actually have real data? Thank you.

3

Response to Commenter P-1010

1. The commenter's statement regarding thanks to the Port for extending the comment period and regarding the Alameda City Council meeting is acknowledged.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

Commenter P-1011
Trish Herrera Spencer

Dear Acting Director Liang,

Thank you for this opportunity to respond to the Oakland International Airport Expansion and Modernization Draft EIR.

1

Firstly, I'd like to thank the Port for hosting the public meetings. I was able to attend the two meetings at the Hilton, and speak at each, in my individual capacity.

I also want to thank the Port for the 30 day extension to respond to the Draft EIR.

As you may know, I currently serve as the Elected Co-Chair of the Oakland Airport-Community Noise Management Forum, and have done so on and off since approximately 2015. I was the mayor of the City of Alameda from 2014 - 2018, and have been serving as a councilmember since 2020. <https://www.alamedaca.gov/GOVERNMENT/Elected-Officials/Councilmember-Trish-Herrera-Spencer> That being said, I write this response in my individual capacity.

I have resided on the east end of Alameda for approximately 25 years. I was diagnosed with a rare, aggressive type of breast cancer in 2007, after living in Alameda for almost 10 years. I have endured numerous cancer treatments over the past 15 years. Coincidentally, but not necessarily so, my neighbor was also diagnosed with the same rare, aggressive type of breast cancer and sadly she succumbed to the disease after about two years of treatments.

I believe that the Draft EIR falls short in numerous ways:

2

None of the BAAQMD monitors are in the City of Alameda. All three noted in the EIR are in Oakland, farther away from the Airport than where the residents of Alameda reside, on Bay Farm and on the main island. Thus, none of the monitors and the data attributed from them accurately reflect what employees of the Airport and residents of Alameda are currently exposed to 24/7. Thus, all analysis to support the expansion fail to accurately reflect the exposure by Alamedans and employees to harmful contaminants and pollutants. It is critical that monitors be placed on the airport, Bay Farm, and throughout the main island of Alameda (i.e., north and south east ends, south along shoreline, west end by Encinal High, etc.) now and before any decisions are made re expansion so that we have more accurate data upon which to base this request. I have made that request at the public meetings and hereby repeat that request.

The noise complaints come from Bay Farm as well as across Alameda. The Draft EIR looks like noise averages. That hides the more extreme noise complaints. They must be addressed.

3

The negative impacts of NextGen. Whereas pre-NextGen, neighborhoods would be exposed to noise and pollutants, now the same houses are repeatedly exposed, as in every 5 minutes. Thus, some people experience extreme exposure to noise and pollutants. The data of noise and contaminants must be collected that accurately measures the repeated

4

exposures because of NextGen, not just over a broad area. That data is missing for both noise and pollutants.

The significant increase in passengers and belly cargo. When I and others have asked what will that look like, the Port has responded that's beyond us, that's the FAA. That has to be addressed. I think it looks like planes 24/7. The impacts (e.g., noise, pollutants, GHG, etc.) will be significant to Alamedans and employees, and other surrounding cities. I don't believe it can be mitigated. The EIR fails to address mitigations, if any.

Alameda has a Climate Action and Resiliency Plan (CARP). The DEIR fails to address how this expansion project will negatively impact the City's CARP. That needs to be included.

Alameda has a Transportation Choices Plan and Vision Zero Plan. The DEIR fails to address increased traffic through the Alameda to access the expanded airport and new parking adjacent to Alameda. It is predictable that with this significant expansion project there will be significant traffic impacts on Alamedans.

The employee parking is being increased at a higher rate than the public parking. Thus, Alameda can expect more people parking in the City of Alameda since the Airport is not increasing public parking at the same rate as employee parking. The impacts on Alamedans' public parking needs to be addressed. We know currently that users of the airport park in public parking in Alameda. Thus, that will increase if the Airport does not sufficiently increase public parking.

The City of Alameda has a Hazard Mitigation Plan, including addressing tsunamis. It's my understanding that the Port (the Airport) has been part of a regional discussion re addressing climate change and sea-level rise. With the Airport expansion, and more buildings and hardscape, Alameda may be subjected to greater impacts, as a result. The DEIR needs to address that. As Alameda is a peninsula and island community, we are already at great risk.

Alternatives. As was raised by members of the public, we have Amtrak in Oakland, and the majority of flights to and from OAK are to destinations serviced by Amtrak. High-speed rail and Amtrak or similar transportation should be considered and explored, which are greener and more economical. That discussion is missing in the DEIR.

Environmental impacts. OAK is on the San Francisco Bay, as is the City of Alameda. When we talk about diverting planes and having more planes over the Bay, there are environmental impacts to the Bay. All of that should be studied to ensure that the impacts to the environment (e.g., the Bay) are minimized. The DEIR fails to address that. Other

airport locations for growth would likely have significantly less environmental impacts, because they're not directly on the water. If it is determined that airport growth in CA is absolutely necessary, alternative sites with fewer environmental impacts should be considered.

Growth inducing impacts - this must be explored in its entirety and the DEIR fails to.

5

6

7

8

9

10

11

12

13

More flights (passenger and belly cargo), more hardscape, more use of limited resources (including water), more exposure to noise and pollutants, the exposure of which to Alamedans, others in the region, and employees must be fully vetted. The DEIR fails to.

14

Thank you for your consideration.

Response to Commenter P-1011

1. The commenter's statement regarding the comment period extension for the Draft EIR, thanks for the public outreach efforts, and their experience with breast cancer are acknowledged.
2. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
3. The noise analysis in the EIR describes the changes in noise associated with the increase in aircraft operations that would occur with or without the implementation of the Proposed Project. See also Global Response D: Noise.
4. The future noise contours provided in Section 3.11 are based on the continued use of these existing flight paths. No changes in flight paths or flight procedures would occur as a result of the Proposed Project. See also Global Response B: Flight Paths and Procedures and Global Response D: Noise.
5. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
6. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. See response to Comment #5 of this letter. The EIR evaluated the effects of the proposed Upland Lot (formerly referred to as the Maitland Lot) through two different analyses. The first was as part of the VMT analysis as required by CEQA. The Upland Lot is proposed to replace approximately 62 percent of the existing economy lot parking spaces that would be demolished. The remaining 38 percent of the existing economy lot spaces would be replaced at the Ron Cowan Lot. The effect on VMT was calculated by looking at origin-destination patterns between five zones (two of which were in Alameda) and the economy lot and determining how average trip length would change, as described in **Section 3.13.3.2** of the EIR. Data collected

for the existing economy lot showed that about 2 percent of trips accessing the economy lot are coming from Alameda. Trips from Alameda would be expected to have a slight decrease in their VMT because both the Upland Lot and the Ron Cowan Lot are closer to Alameda than the existing economy lot. This decrease in VMT for Alameda traffic was offset by the increase in trip length for vehicles coming from other locations, such as Hegenberger Road. This resulted in an increase of approximately 0.25 miles (**Table 3.13-13**) to the average trip length for vehicles accessing economy parking as a result of the Proposed Project. It is important to note that the Proposed Project's effect on VMT is the result of relocation of parking facilities within Airport property and not related to growth in passenger volumes.

The second assessment of the effects of the Upland Lot was a level of service assessment (LOS) at key intersections. This LOS assessment was done for informational purposes only because LOS is no longer part of CEQA analyses for transportation impacts. Similar to the VMT methodology, the LOS assessment looked at the number of vehicles projected to travel between the city of Alameda and the Upland and Ron Cowan lots following demolition of the existing economy lot.

Appendix D of the EIR contains graphics showing how volumes at seven intersections were affected by the route changes. The low percentage (2 percent, which totals approximately 14 daily vehicle trips) of trips between the city of Alameda and the economy lot resulted in relatively minor changes in traffic patterns from the existing economy lots to the proposed parking lots resulting in little effect on intersection operations and LOS. Therefore, the overall VMT impact would be less than significant.

Because the effect would be less than significant, no mitigation measures are required. However, the Port will use wayfinding and signage to direct vehicle traffic to access the Airport through the primary access routes (98th Avenue and Hegenberger Road).

8. As described in Global Response A: Aviation Forecast, the size of the project components, as identified in **Chapter 2** of the EIR, is driven by forecast market demand. Further, it is not the footprint nor the size of the Proposed Project that causes these impacts, but the forecast flights at OAK that result in the identified significant air quality impacts. Given the project objectives are to support the forecast, as shown in **Table 2-2** of the EIR, the gate requirements of the Proposed Project represent the minimum number and size of gates needed to appropriately support the forecast and any alternative proposed would need to be of similar size and scope.
9. For a discussion on climate change and sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the

Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. Any aircraft that was included in the aviation forecast included in **Appendix B** of the EIR, was included in the air quality and noise analyses. The activity forecast for OAK was developed by the Port to provide informed projections of what the multiple airline and cargo operators are likely to offer (supply) in response to where people want to fly or where goods need to be flown (market demand). The forecasting methodologies are consistent with industry practice, meet FAA requirements, and are reflective of regional dynamics. See Global Response A: Aviation Forecast.
12. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
13. As stated in **Section 2.5** of the EIR, the Proposed Project is designed to accommodate the forecast market demand at industry standard levels of service. Thus, the Proposed Project is not growth-inducing because it is accommodating a demand that is forecast to occur. See also Global Response A: Aviation Forecast.
14. **Chapter 3** of the EIR discloses all of the impacts that would occur as a result of the implementation of the Proposed Project.

Commenter P-1012

Amber Spiel

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.
- We have alternatives. Invest in Rail.

1

2

3

4

5

6

7

8

9

- We have alternatives like remote business and conferencing.
- We need to shift towards climate-just transportation.

Response to Commenter P-1012

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1013**Greg Spooner**

I'm a physicist and a climate activist with the Climate Justice Group's Scientists Rebellion and Extinction Rebellion. Your project title "OAK Terminal Modernization and Development," and the DEIR itself emphasize the work "modernization" and who could oppose the word modernization but what would a responsible modernization look like for an international airport?

1

Well, the IEC, the IPCC, and the UN as well as the vast majority of climate scientists, ecologists, earth scientists all say that humanity has to rapidly ramp down the emission and greenhouse gasses from every sector if we're to maintain a planet capable of supporting a civilization or even to maintain the conditions so you can fly your jets.

Real modernization would be to reshape your plan to provide for the safe and convenient operation of this airport while not growing air traffic and not growing emissions. A truly modern project would not expand the number of gates as your plan does by 16. An airport project that faces its responsibility to meet the modern needs of the broader community would not add a third terminal as your plan does. Real modernization would not pave the way to double passenger volume in two decades as your plan does.

I know the idea of a project that explicitly aims at reducing aviation, reducing air traffic, and reducing growth is against everything that you know we built here in this society but we have to face the facts. In the face of an accelerating climate emergency a truly modern approach would be recognize that aviation emissions are adding to the climate crisis which may lead to the collapse of our civilization. I ask you to do what the word moder actually requires you to do; recognize the emergency we're in and take action. Thank you.

2

Response to Commenter P-1013

1. The Proposed Project would construct a new terminal that would include up to 25 aircraft gates in an approximately 830,000-square-foot building. The Proposed Project also includes the optimization of the aircraft gates in Terminals 1 and 2 so that each gate can operate independently. This would reduce the number of aircraft gates in Terminals 1 and 2 from 29 to 20. Thus, the Proposed Project would result in a net increase of 16 aircraft gates. The gate requirements represent the minimum number and size of gates needed to support the forecast. As stated in **Section 2.5** of the EIR, the Proposed Project is designed to accommodate the forecast market demand at industry standard levels of service. Thus, the Proposed Project is not growth-inducing because it is accommodating a demand that is forecast to occur. See also Global Response A: Aviation Forecast.
2. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1014**Greg Spooner**

Aviation is one of the fastest growing contributors to GHG emissions. We can't say we are serious about stopping global warming if we continue expanding fossil fuel based aviation. If

1

we can't manage to limit this, how will we be able to make any real changes at all? Let's start by getting serious about limiting jet emissions. Stop the expansion of OAK (and all other commercial aviation).

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

• We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

2

• Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

3

• Aviation is hard to decarbonize and biofuels are not the answer.

4

• It's too much noise. More Flights= More noise.

5

• Sea level rise threatens shoreline development.

6

• Labor rights are at stake.

7

• Inequity: flying is an elite privilege with high costs for everyone else.

8

• We have alternatives. Invest in Rail.

9

• We have alternatives like remote business and conferencing.

10

• We need to shift towards climate-just transportation.

11

Response to Commenter P-1014

- The commenter's statement regarding global warming, stopping fossil fuel-based aviation, and opposition to the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.

Section 4.3 of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

- The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1015**Greg Spooner**

Good evening Port representatives.· My name is Greg Spooner as you just said..· Until last year I lived in San Francisco. I now live in Sacramento.· I'm a 61-year-old physicist, I work in laser medicine, and I'm a climate activist with Climate Justice groups, Scientists Rebellion, and XRSFA.· Going into the DEIR it's pretty challenging to figure out what the real emissions impact of the proposed expansion would be since most of the emissions are associated with jets flying away from the airport, not taking off and landing as they cruise hundreds of miles but even if we just look at the so-called LTO evidence of the greenhouse gasses contained in the Draft EIR it's clear that what the plan describes represents an

1

increase of around ten percent over the baseline 2019 year or 2028 and somewhere around 35 percent by 2038.

Okay.. So what are the expected emissions from the rest of the Bay during that period? Well, DOCMED (sic) in their 2017 report looks to see GHG emissions drop by about 10 percent by 2030 and 20 percent by 2040.. In transport the District expects a similar drop so while the rest of the Bay will be responding to the climate emergency by reducing GHG's your plan calls for going in the opposite direction and why?. Because you can.. The aviation sector has done an amazing job of implementing itself from regulation and reporting by local, State or even Federal authorities.. The Port Authority says it doesn't have the authority to regulate emissions. That's true, but you have the power to do so, so I'd like to ask you to do so in this time of climate emergency.. Stop increasing emissions and please reshape this plan in a way that the OAK modernization does not mean a growth in aviation and emissions. Thank you, very much.

Response to Commenter P-1015

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion on climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1016

Commenter P-1018
Carolyn Squeri

This plan seems excessive, with very significant negative consequences for the people who live in Alameda on Bay Farm Island, including many members of my family. Please reconsider. This plan also seems ill-considered given the very real consequences of climate change and rising sea levels, much faster than ever imagined. Your runways will be under water before they are

1
2

paid for! Oakland should be investing in high-speed rail like they have in Japan and Europe - much better for people and our planet! Thank you for considering better alternatives for our future.	3

57. Inequity: flying is an elite privilege with high costs for everyone else.	11
58. We have alternatives. Invest in Rail.	12
59. We have alternatives like remote business and conferencing.	
60. We need to shift towards climate-just transportation.	13

Response to Commenter P-1018

1. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR. The commenter's statement regarding opposition to the Proposed Project is acknowledged.
2. For a discussion on climate change and sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
3. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
4. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

6. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
7. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
8. For a discussion of aircraft noise, see Global Response D: Noise.
9. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
10. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
11. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
12. See response to Comment #3 of this letter.
13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1019**Jason Stafford**

Environmental impact	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-1019

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1020**Olga Stafford**

It is already too much ground noise from the Airport. They never did anything to reduce it. It is also an unsafe practice to fly over the civilian settlements. I am still waiting on the analysis of the air content after planes are cruising over my head and what I am breathing in. The traffic problem will be worsened after expansion. As the ongoing problem for Alameda itself due to poor management from the current mayor Ashcraft and city council.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

Response to Commenter P-1020

- Chapter 3** of the EIR provides analyses of environmental resource impacts that would occur as a result of the implementation of the Proposed Project. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
- The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1021**Joan Starr**

The expansion means more flights, more pollution, more global warming emissions, and more noise. This is also bad for airport neighbors, shorebirds and animals. We are in a climate emergency. All decisions must keep this in mind.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Response to Commenter P-1021

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. **Section 3.4** of the EIR provides an analysis of the biological resource impacts that would occur as a result of the implementation of the Proposed Project. The commenter’s statement regarding being in a climate emergency is acknowledged.
2. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1027

M. Steppe

Air transportation is a climate risk. The money for airport expansion needs to be used to develop other methods of transportation, such as cheaper rail or long distance busing.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

• Inequity: flying is an elite privilege with high costs for everyone else.	9
• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	11

Response to Commenter P-1027

1. The commenter's statement regarding air transportation being a climate risk is acknowledged. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. See response to Comment #1 of this letter.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1029**Kathy Stiles**

Hasn't the Oak. Airport already done enough damage! The expansion of the North Field 8 yrs. ago, literally into the backyard of the east end of Alameda (main island) has been an absolute never-ending nightmare! The ungodly noise from planes taking off directly over our homes, the deafening engine run-up roars, the nightly horror-show of planes launching one after another after another, along with the disrespectful "attacks" from the small planes, has changed my quiet east end home into what feels like living in a WAR ZONE! And forget about getting a decent night sleep. It is all so very Wrong! And doesn't even take into account what they're doing to the air quality, which has an even more widespread detrimental effect on the surrounding communities. And just which runways are all of these added planes going to be taking off from? I fear it's going to be the North field ones! That the Hell will greatly worsen! OAK needs to be operating more respectfully, NOT EXPANDING!!!

Response to Commenter P-1029

1. The commenter's statement regarding North Field is acknowledged.
2. The commenter's statement regarding noise from planes over their homes and deafening engines is acknowledged. For a discussion on aircraft noise, see Global Response D: Noise. **Appendix M** of the EIR provides information regarding sleep disturbance resulting from nighttime aircraft operations at OAK.
3. **Section 3.3** of the EIR discuss air quality impacts. No significant air quality impacts would occur as a result of the implementation of the Proposed Project.
4. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
5. The commenter's opposition to the Proposed Project is acknowledged.
6. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
8. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 15. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1030**Linda Stone**

I am a resident of Alameda on Bay Farm island, so I am very close to the airport. I moved here in 1988. I was well aware of the airport being my neighbor. I actually like living close by, since I do fly to see the grandkids.

I am very concerned about the proposed addition of 16 gates. I fear there will be much more utilization of the north field. Jets departing from the north field fly directly over my back yard. It is painfully loud. Please be a good neighbor and not fly jets from the north field. Maybe build a parallel runway next to the south runway. Only small planes and the blue angles (its only once a year and they are fun to see) on the north.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1034
Sharon Strachan

As a person of faith and conscience, I oppose the proposed expansion of OAK. It would harm our community and our climate, disproportionately impacting the most vulnerable including lower income people and those with asthma or other respiratory disease.

1 2

California High Speed Rail and Brightline West will serve many of the airport destinations via high-speed rail. When these systems are complete, approximately 46% of the airport flights can be replaced by high-speed rail! Oakland and Port leadership need to be finding ways to cut carbon pollution, not locking in decades more of it.

3

Your idea of modernizing what is already at the airport is more reasonable, especially if the modernization includes ways to make the airport much more energy-efficient. Adding more to the airport defeats our environmental plans for energy efficiency and reduction following the guidelines of our state, our nation, and the Paris Accords. Thank you.

4

Response to Commenter P-1034

1. The commenter's opposition to the Proposed Project is acknowledged.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.

3. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
4. The commenter's statement regarding modernization of the airport being reasonable but not expansion is acknowledged. See also Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1035**Nicole Strauss**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Commenter P-1036

Kathleen Stricklin

"Hello. My name is Patrick Oliver and I am a neighbor and local high school science teacher. My family and I live on 23rd Avenue in Oakland, about 7 miles from the airport. I urge you to immediately reject the proposed expansion of OAK airport." 1

The expansion is a dangerous scheme that threatens all of us. We are in a Climate Emergency and we need to act like it. There is NO WAY we can expand aviation and reduce greenhouse gas emissions. 2
The Draft Environmental Impact Report (Draft EIR) claims that demand for new flights would rise regardless of whether the Project is built, but that's insane.

If you build it, they will come. This is called "induced demand". Expanding the airport will expand the airport's pollution. Shrinking the airport would shrink its emissions, We need to reduce demand for aviation -- by making flying more expensive and burdensome and making low-carbon alternatives more inexpensive and easier. 3

It is ironic, of course, that sea-level rise projections due to carbon emission pollution, like those from OAK, threaten to put the airport under underwater from storm surges and rising tides. This will be well deserved, when it happens. The Port should not expect a taxpayer bailout or beg for an ineffective seawall to be built to save its polluting infrastructure when climate chaos hits.

4

Stopping OAK expansion matters to us because millions of species, particularly marine organisms, are threatened with extinction TODAY due to rising temperatures from your climate pollution. OAK expansion will threaten our family's ability to breathe clean air and live on a healthy planet TOMORROW.

5

We urge you to cancel this project and work to reduce the huge pollution impacts that OAK is already responsible for.

6

Global aviation is killing us with carbon emissions, smog and black soot. This Project would enable more growth and more flights at the exact time we need to reduce emissions and prioritize our health. Thank you for your time."

7

Response to Commenter P-1036

1. The commenter's statement urging the Port to reject the Proposed Project is acknowledged.
2. For a discussion on climate change and greenhouse gas emissions, see Global Response G: Greenhouse Gas and Climate Change.
3. The Proposed Project is intended to better accommodate the forecast market demand in aircraft operations and enplanements.

The EIR identifies impacts that could occur but that the Port does not have the authority to control. These impacts are generally associated with aircraft operations. While OAK is subject to the regulatory authority of the FAA and TSA, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.

In the past sixteen years, four medium-hub airports (Indianapolis International, Jacksonville International, Louis Armstrong New Orleans International, and Sacramento International) opened new passenger terminal buildings (see **Table P-4** in Global Response A: Aviation Forecast). The national number of enplanements is included in this table as a reference to show national trends in enplanements both before and after these four terminal buildings were opened. In comparing the number of enplaned passengers prior to and after the opening of the passenger terminal building, it is evident that there is no correlation between the construction of a passenger terminal building and an increase in annual enplanements at the same airport. This data shows that the passenger terminal building does not increase passenger demand at an airport. The demand for air transportation is a function of the socioeconomic conditions of the region served by the airport, not the attractiveness of a new passenger terminal building. The Proposed Project would

accommodate forecast demand while meeting FAA safety standards at industry standard levels of service. See also Global Response A: Aviation Forecast.

4. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
5. For a discussion on climate pollution, see Global Response G: Greenhouse Gas and Climate Change.
6. The commenter's opposition to the Proposed Project is acknowledged. **Section 3.3** of the EIR discusses air quality impacts. No significant air quality impact would occur as a result of the implementation of the Proposed Project.
7. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Response to Commenter P-1037

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1038

Jason Su

More expansion means increased flights, leading to greater noise, affecting residents' health and well-being. My wife was unable to sleep for three nights when the South Field was under repair and major air traffic was redirected to the North Field, the direct path of takeoff over our house. It also exacerbates air quality issues in the region, which doubles or

1

2

triples EPA standard, endangering community health. Additionally, expansion could encroach on vital ecosystems and displace communities, disrupting lives. Instead, we should invest in sustainable transportation options like public transit and high-speed rail to reduce short-haul flights. Prioritizing the environment and residents' well-being is essential over short-term economic gains. Positioning air quality and noise monitors directly above North Field's flight path provides residents with tangible proof of compliance with air traffic regulations and guidelines.

3

4

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

5

41. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

6

42. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

7

43. Aviation is hard to decarbonize and biofuels are not the answer.

8

44. It's too much noise. More Flights= More noise.

9

45. Sea level rise threatens shoreline development.

10

46. Labor rights are at stake.

11

47. Inequity: flying is an elite privilege with high costs for everyone else.

12

48. We have alternatives. Invest in Rail.

13

49. We have alternatives like remote business and conferencing.

50. We need to shift towards climate-just transportation.

14

Response to Commenter P-1038

1. The commenter's statement regarding aircraft noise affecting resident's health and disturbing sleep is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion on aircraft noise, see Global Response D: Noise. **Appendix M** of the EIR provides information regarding sleep disturbance resulting from nighttime aircraft operations at OAK.
2. **Section 3.3** of the EIR discusses air quality impacts. No significant air quality impact would occur as a result of the implementation of the Proposed Project.

3. **Section 3.4** of the EIR provides an analysis of the biological resource impacts that would occur as a result of the Proposed Project. With respect to other travel alternatives, the Port does not have the authority to require air travelers to use other modes of transportation. Also see Global Response E: Environmental Justice and Community Engagement.
4. The commenter's statement regarding prioritizing the environment and residents' well-being is acknowledged. For a discussion on flight paths and air traffic, see Global Response B: Flight Paths and Procedures. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
5. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
6. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
8. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
9. For a discussion of aircraft noise, see Global Response D: Noise.
10. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
11. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
12. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
13. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of

aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

14. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1039

Jason G. Su

Response to "Human Health Risk Assessment Technical Report":

The report displays an unwavering bias in favor of the Oakland Airport's modernization and expansion project, to the point that it reads more like a promotional pamphlet than an objective, independent scientific assessment. True scientific reports should maintain a neutral stance while conducting human health risk assessments.

1

It is perplexing to note that the report initiates by referencing human health risk thresholds before even conducting a proper risk assessment. This seemingly prejudicial approach immediately raises doubts about the objectivity of the report. Notably, BAAQMD is primarily an air quality management district, not a public health institute, and it lacks the authority to establish health risk thresholds. Any claims regarding the existence of such thresholds should be supported with credible scientific evidence, which, to my knowledge of 20 years of environmental health research, does not exist for cancer health risks attributable to air pollution.

2

Furthermore, the omission of respiratory risks arising from air toxics is a glaring oversight, as these factors are instrumental in gauging the true scale of the project's impact. The use of non-performance dispersion models also casts doubts on the reliability of the reported concentrations, as they can deviate significantly from actual measurements. Transparency in reporting the model's accuracy concerning ground measurements specifically attributable to airport operations is imperative.

3

4

The study's widespread receptors placed around the airport appear to dilute the true impact. A more meaningful analysis should define and assess the effects on vulnerable communities, which bear the greatest burden. The evaluation should focus on the impact of the project on these communities, rather than diluting the results with broader population data.

5

The method of comparing incremental human health risks to baseline (2019) is problematic. It disregards the dynamic impact of the project on human health. It is essential to report health risks annually and, if using incremental risks, to compare them with those from other sources like traffic and industrial emissions. Considering the significant overall reduction in air pollution levels across sectors in the last two decades, the project's incremental health risks should surpass those from other sources to justify its continuation.

6

Response to "Air Quality" Assessment:

The air quality assessment report heavily relies on data from regulatory air quality monitoring stations, with the nearest station, mistakenly labeled as "Oakland East" (should be "East Oakland"), located 4.4 km away from the North Field. The second station at Laney

7

College is even further at 9.0 km, and the third station, erroneously labeled as "Oakland West" (should be "West Oakland"), is over 10 km away. These monitoring stations' substantial distance from the airport raises doubts about their representativeness regarding the true impact of air traffic.

Of particular concern is the fact that the data from these monitoring stations predominantly reflect the influence of local roadway traffic, failing to adequately capture the potential effects of air traffic. For instance, NOx pollution, which tends to have a localized impact, significantly affects areas within a radius of less than 500 meters. Given that NOx concentrations from aircraft can exceed 100 ug/m³ or over 50 ppb, while typical roadway NOx levels in the San Francisco Bay region remain below 30 ppb, it is clear that the measured NOx concentrations are more indicative of local road traffic than air traffic.

To directly address the health impacts of air and noise pollution from air traffic, the Port of Oakland should consider installing air quality and noise monitors on the rooftops of the Bay Farm Elementary School buildings. These structures lie directly beneath the flight path of the North Field and such air quality and noise measurements would provide long-term evidence of the airport's compliance with air and noise pollution regulations and demonstrate a genuine commitment of the Port of Oakland to public health.

8

Response to Commenter P-1039

1. The commenter's statement about the human health risk assessment (HHRA) is acknowledged. The HHRA was conducted in accordance with the HHRA modeling protocol, included as Attachment 1 in **Appendix E** of the EIR, which was reviewed by BAAQMD and follows the modeling procedures developed by BAAQMD and California Environmental Protection Agency (CalEPA) Office of Environmental Health Hazard Assessment (OEHHA). See also Global Response F: Human Health Risk Assessment.
2. The BAAQMD CEQA guidance includes risk thresholds associated to the individual TACs, and also includes concentration significance thresholds for project total and cumulative total PM_{2.5}. Therefore, dispersion modeling results of PM_{2.5} are compared to the concentration thresholds in the CEQA guidance. The comparison to the PM_{2.5} project threshold is presented in the EIR **Section 3.3**, page 3.3-46, and **Appendix E**, Section E.4.2, including Figure E-4. The comparison to the cumulative PM_{2.5} threshold is presented in the EIR, Appendix E, Section E.4.3.3, including Figure E-5. Both results were below the BAAQMD significance thresholds. See also Global Response F: Human Health Risk Assessment.
3. The 8-hour non-cancer health hazard to on-Airport workers is dominated by formaldehyde and acrolein, both pollutants are associated with commercial aircraft operations. The peak location of the impact is shown in the EIR, **Section 3.3**, **Figure 3.3-3**. This location implies that the concentrations in the aircraft ramp area around the passenger terminals could be at or above the significance threshold.

According to National Institute of Occupational Safety and Health (NIOSH), symptoms of exposure to formaldehyde include irritation to the eyes, nose, throat, and respiratory system causing tearing, coughing, and wheezing. The reference exposure level (REL), used as the significance threshold for 8-hour exposure to

formaldehyde is set by OEHHA to 9 ug/m3. Exposure to acrolein may lead to irritation to the eyes, skin, and mucous membrane; decreased pulmonary function, delayed pulmonary edema, and chronic respiratory disease. The REL, used as the significance threshold for 8-hour exposure to acrolein is set by OEHHA to 0.7 ug/m3.

Additionally, a health risk assessment cannot be used to definitively show causation between exposure to a specific toxic substance and an individual's illness. While the potentially significant impact to on-Airport workers disclosed in the EIR shows exceedance of the OEHHA health risk criteria, this shows that there is potential for non-cancer health effects to occur but cannot be used to determine the number of workers who would experience health effect, or the severity of extent of symptoms.

See also Global Response F: Human Health Risk Assessment.

4. TACs were modeled and analyzed using the USEPA dispersion model AERMOD and discussed and summarized in **Section 3.3** of the EIR and **Appendix E**. See also Global Response F: Human Health Risk Assessment.
5. The commenter's assertion that the EIR's inclusion of widespread receptors extending outward from the airport is diluting the impact indicates a misunderstanding of the risk evaluation process. Rather than the wide breadth of receptors 'diluting' the impact, the broad extent receptors ensures that the maximally exposed individual (MEI) is captured in the analysis. For each and every receptor analyzed in the EIR HHRA, the calculated concentrations of all TAC of concern are used to estimate the cancer and non-cancer risk of an individual located at that receptor. The maximum impact presented in the HHRA, which is compared directly to the applicable BAAQMD thresholds, represent the maximum impact across all receptors, including vulnerable communities in the vicinity of the airport, and is not a 'diluted' impact. This is described in more detail in the Methodology section of the HHRA, included as **Appendix E** of the EIR. See also Global Response F: Human Health Risk Assessment.
6. As presented in **Section 3.3** and **Appendix E** of the EIR and discussed further in Global Response F: Human Health Risk Assessment, TAC emissions, particularly those of diesel PM - the primary mobile source carcinogen associated with Airport activity - would decrease under the future Proposed Project conditions relative to the environmental baseline (2019). Accordingly long-term operational carcinogenic health risk and non-cancer health hazards would be lower under the future conditions than the baseline for all off-Airport receptors.

As stated in **Appendix B**, 2019 was determined to be the baseline year (existing conditions), which was pre-COVID. Section 15125 of the CEQA Guidelines requires an EIR to include a description of the physical environmental conditions in the vicinity of the Proposed Project to act as the baseline physical conditions by which a lead agency determines whether an impact is significant. As the Guidelines make clear, generally the baseline will be the environmental conditions existing at the time when the Notice of Preparation (NOP) is published. However, where existing conditions change or fluctuate over time, and where necessary to provide the most

accurate picture practically possible of the Proposed Project's impacts, a lead agency may define existing conditions by referencing historical conditions. The goal of the analysis in the EIR is to disclose the impacts of the Proposed Project to the public and decision makers. To do so, using historical data from 2019, as opposed to the NOP date, to establish the baseline is appropriate to present a fair and accurate description of a Proposed Project's expected environmental impacts. The degree to which aviation demand was reduced due to the COVID pandemic starting in 2020 is considered highly unusual. The NOP was issued in 2021, during a period of extreme change; the operations during this time would not provide a reasonable representation of normal activity. The Port, therefore, believes that the most recent pre-COVID conditions, as experienced in 2019, best represent the existing conditions for this analysis. Also see Global Response C: Baseline Year for a discussion of 2019 as the baseline year.

7. The commenter's notes relating to the naming of the East Oakland and West Oakland monitoring stations are acknowledged. The commenter also suggests that the distance of the West and East Oakland monitoring stations may not be representative of actual local conditions. These conditions are presented to contextualize project impacts and to assist decisionmakers in considering the effects of the project on local air quality. Moreover, because no single monitor perfectly reflects the existing local air quality conditions at the Airport itself, the EIR includes monitoring data summary tables from all Bay Area monitors in the vicinity (**Table 3.3-4** in the EIR) and from those monitoring located closest to the airport (**Table 3.3-5** in the EIR) to provide the broadest context. Moreover, the local air quality conditions are presented in the EIR predominantly for disclosure and contextual purposes, as these monitoring results are not directly referenced in the assessment of project impacts relative to significance criteria, consistent with BAAQMD Guidelines for the evaluation of project-level air quality impacts. The BAAQMD air quality significance thresholds are discussed in detail in **Section 2.2** of **Appendix F** of the EIR.
8. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

Commenter P-1040

Kathy Sugitani

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.

1

2

3

4

5

6

7

8

8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Response to Commenter P-1041

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1042**Michael Sullivan**

I personally feel that we should be flying less to reduce the impact on the environment. This expansion is going to do the opposite

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-1042

1. The commenter's statement regarding flying less is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G:

Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1043

Kathleen Sum

I have lived right next to the Oakland Airport since 1995 and have experienced increasing aircraft noise that is becoming unacceptable. In the mornings starting at 6-7 AM there are plane after plane taking off every minute. It's been a daily assault on my hearing and peace of mind. There can be no more planes and runways going over and/or near our homes. It's already bad enough as it is. I cannot hear or have a conversation in my backyard when the planes fly by.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-1043

1. The commenter's statement regarding aircraft noise assaulting their hearing and peace of mind is acknowledged. For a discussion on aircraft noise, see Global Response D: Noise.

Commenter P-1044
Stephen and Kathleen Sum

We have lived on Ratto Road near the OAK since 1995 and over the years have had to deal with more and more aircraft flights and attendant noise over the years. We cannot hear any conversations in our backyard when the airplanes fly overhead and am waken up at 6-7:00 am with constant aircraft flying overhead almost every minute. We do not want anymore expansion runways going over our homes at all, and it is imperative to have more studies done on the airplane noise and emissions that affect our neighborhood. It is unconscionable to not do these things.

1

Response to Commenter P-1044

1. The commenter's statement regarding aircraft flight and attendant noise and not being able to hear any conversations in their backyard is acknowledged. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast. For a discussion on aircraft noise, see Global Response D: Noise.

Commenter P-1045

Commenter P-1050

Kathryn Taddei

Increased noise and air pollution that can lead to health problems are my greatest concerns. I live very close to this airport and have experienced sleep disturbance from planes flying at all hours of the day and night. Double paned glass windows make no difference especially when all flights are diverted to the north field during inclement weather and runway repair.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.

7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-1050

1. The commenter's statement regarding experiencing sleep disturbance and double-paned windows making no difference is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1051**John Takayama**

I'm against this expansion whole heartedly. If we are forced to live with this extra pollution and noise, they should pay all Alamedians 25% of all profits and more to Bay Farm Island residents. They should pay rent for using our air space monthly.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.
5. Sea level rise threatens shoreline development.
6. Labor rights are at stake.
7. Inequity: flying is an elite privilege with high costs for everyone else.
8. We have alternatives. Invest in Rail.
9. We have alternatives like remote business and conferencing.
10. We need to shift towards climate-just transportation.

Response to Commenter P-1051

1. The commenter's opposition to the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft

types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1052**Kevin Tan**

Expanding the airport capacity will increase noise levels from more jets. Another concern is all children near airport exposed to high lead levels if the airport travel flow expands significantly. As an Oka airport neighborhood, I don't want this happen due to this project. I do want city do more investigations on how this expansion will impact people health by noise and lead levels.

1

Having flights day and night go over our homes is a horrible proposal. If project do expand, I think it should build runways that point into the bay and not over homes as a compromise.

2

Response to Commenter P-1052

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.

2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. See also Global Response B: Flight Paths and Procedures and Global Response D: Noise.

Commenter P-1053**Theresa Tan**

I share many concerns with my Alameda neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly and negatively impact residents and schools in its vicinity. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda

1

2

residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents. I request that the Port of Oakland explores all other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.).

3

4

5

I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response lacks the strong dissent of their citizens. Please do NOT approve the expansion proposal until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

6

7

Response to Commenter P-1053

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-1054**Theresa Tan**

The noise and pollution makes me resent living here - please make the East Bay a better place to live!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-1054

1. The commenter's statement regarding resenting living here due to noise and pollution is acknowledged.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1055**Michelle Tang**

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity.

With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more

1

2

frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

3

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

4

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

5

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

6

7

Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

8

Response to Commenter P-1055

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provides an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter’s statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-1056

Commenter P-1058

Anthony Tejada

My comment is specific to Chapter 3 of the EIR, Figure 3.1-3. It goes on to explain kind of the - - boundary limits that are depicted in that figure. And I was hoping as part of the EIR comment resolution process, someone could expand on how the project boundary, the general study area was determined.

It looks as though it's intersecting with San Francisco County, San Mateo County, Alameda County limit lines on the west side, which makes sense. But as far as the east side, the project boundary, the general study area is basically running the limits of International Boulevard and East 14th Street and that's essentially as far east as it goes.

I have heard a few different comments here regarding flight paths and those over, you know, various areas of San Leandro, Oakland, and other communities. It would seem as though that project boundary on the east side would be better served pushing further east

1

than the encroached limits that are depicted right now on International Boulevard and East 14th, at least to a bare minimum using I-580 as a marker, the complete span of I-580.

So, yeah, if that can just be addressed and expanded upon as to how that general study area was determined, and you know, expand on the fact that it does provide some sort of all-inclusive reading or metric as to how it was derived, that would be great.

And if not, if the Port could consider expanding the eastern limits out to at least I-580 so that we are getting more of a wider, broader picture of what the impacts are. Thank you.

Response to Commenter P-1058

1. Two study areas were developed for use in this EIR: a general study area (see **Figure 3-1**) for analysis of impacts that could extend beyond Airport property, and a detailed study area (see **Figure 3-2**) for impacts that would be more likely to occur within the direct footprint of the Proposed Project. The general study area (**Figure 3-1**) was developed by starting with the Airport's 65 decibel (dB) noise contours and extending the boundary out to International Boulevard to the north and east and CA-92 to the south.

3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo

areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1064

Laura Thomas

I live under the flight path of jets going to and leaving Oakland and the noise is unsettling and loud. These jets fly right over my house and are so they wake me up. Too much noise and environmental pollution.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.

3

4

5

6

• Sea level rise threatens shoreline development.	7
• Labor rights are at stake.	8
• Inequity: flying is an elite privilege with high costs for everyone else.	9
• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	11

Response to Commenter P-1064

1. The commenter's statement regarding jet noise being unsettling, loud, and waking them up is acknowledged. For a discussion on aircraft noise, see Global Response D: Noise. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1072**Jan Tomsic**

When OAK changed flight paths a few years ago (10?), my home, which did not have any flight noise issues previously, became impacted by flight noise that frequently wakes me in the still early morning hours. Please do not add additional flights to OAK, for this reason, and all the others listed in this email. Do all the upgrades you want, but do not increase air traffic. Thank you so much.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-1072

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of

aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.

5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1074**Rochelle Towers**

More pollution? More noise? More traffic? No way!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-1074

1. **Sections 3.3, 3.11 and 3.13** of the EIR discuss air quality, noise, and traffic impacts, respectively. No significant air quality, noise, or traffic impacts would occur as a result of the implementation of the Proposed Project.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Commenter P-1079

Igor Tregub

Hi my name is Igor, and I am a Berkeley resident. I am writing to lodge my concerns associated with increased use of fossil fuels associated with this project. The Project will undoubtedly enable more flights to depart from and land at Oakland Airport. The Draft Environmental Impact Report (Draft EIR) claims that demand for new flights would rise regardless of whether the Project is built, but that can't be true. The Project creates a third terminal and 16 new gates, allowing more flights to take off and land, and creates 1,000 new parking spaces and multiple new buildings that streamline airport operations. For example, the Draft EIR claims that the expected passenger volume would double in the next 20 years. The Project would undoubtedly pave the way for more flights and more passengers, and it is disingenuous to suggest that that growth would happen regardless.

Commenter P-1080**Cecilia Trost**

OAK says it needs more gates, and at the same time is in the midst of a "rebranding" and considering changing the airport name "to attract more flyers". So which is it, they have/project to have more people flying than the existing airport can handle, or they need a lot more people flying in the future to justify 17 new gates?? Also, Terminal 1 is way under-utilized and has been since United/American/Delta pulled out.

Commenter P-1081**Shin Tsai**

My neighbors and I, who live near the Oakland airport, already experience significant stress on a daily basis because of the noise pollution generated by airplanes flying overhead and nearby. This kind of noise pollution disrupts sleep and can lead to increases in heart attacks and strokes. Expanding the airport will only cause greater harm to our psychological and physical health. I'm especially concerned for the well-being of the young children and elderly who live here.

1

11

Response to Commenter P-1081

- Sections 3.11** of the EIR discusses noise impacts. No significant noise impacts would occur as a result of the implementation of the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. Also see Global Response E: Environmental Justice and Community Engagement.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1082**Shin Yi Tsai**

This letter is respectfully submitted as commentary on the DEIR. I have been an Alameda Bay Farm resident for the past 10+ years and am writing to express strong opposition to the proposed expansion of the Oakland airport. This project will negatively impact the health, mental health and homes of residents as well as local wildlife.

1

I'm very concerned that the airport expansion will increase the number and frequency of flights using the North Field runway, including small aircrafts and large jets. No guarantee or mandate is being offered that this will be prevented. What would result would include louder, more frequent noise disturbances and jet fuel released directly over Alameda homes and schools.

2

Just recently from September 22, 2023, through Monday, September 25, 2023, as part of the Taxiway W Rehabilitation Project, I and my neighbors endured over 400 airplanes departing from and arriving to the North Field runway, and it was incredibly stressful and intolerable. My home actually shook from the booming noises; my sleep was disrupted; I couldn't leave windows open; and I wasn't able to work from home. I was forced to leave my home for periods of the day just to escape the noise. I'm very concerned that this will become the norm if the Oakland airport succeeds in its expansion plan.

3

Neighbors living closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from airplanes departing from the Oakland airport. Noise and air pollution are of greatest concern, but there are many other impacts like decreased property values, environmental and wildlife concerns and increased vehicle traffic.

According to a New York Times article published on June 9, 2023, titled "Noise Could Take Years Off Your Life. Here's How:", there's a growing body of research that shows that chronic noise, including from aircrafts, increases the risks of hypertension, stroke and heart attacks.

Furthermore, here is a paragraph from an article published in Spring 2022 of the Harvard Medicine magazine (<https://magazine.hms.harvard.edu/articles/noise-and-health>):

Research shows "that noise pollution not only drives hearing loss, tinnitus, and hypersensitivity to sound, but can cause or exacerbate cardiovascular disease; type 2 diabetes; sleep disturbances; stress; mental health and cognition problems, including memory impairment and attention deficits; childhood learning delays; and low birth weight. Scientists are investigating other possible links, including to dementia."

4

A growing number of studies also indicate that animals, similar to humans, are stressed and negatively impacted by noisy environments. These results are examined in a synthesis of two decades of research documenting the effects of noise on wildlife by Shannon et al, published June 26, 2015, (<https://onlinelibrary.wiley.com/doi/abs/10.1111/brv.12207>). Alameda is known for hosting a wide variety of birds and other wildlife on Bay Farm and the main island, such as at the Elsie Roemer Bird Sanctuary. These birds include Peregrine Falcons, Osprey, Double-Crested Cormorants, Brown Pelicans, Great Blue Herons, Egrets and Harbor Seals and even American Bald Eagles. I request that the Port of Oakland and the City of Alameda conduct studies on the current impacts on local birds and other wildlife of ongoing noise pollution generated by the Oakland airport.

5

I also request that the Port of Oakland and the City of Alameda conduct studies on the current health and mental health impacts of noise pollution generated by the Oakland airport for Alameda residents of all ages, and offer projections of future risks that the airport expansion poses. Can the Port of Oakland guarantee that the proposed expansion

will not lead to greater harm to the health and mental health of Alameda residents? What efforts will the Port of Oakland make to prevent greater risk of such harm? I request that the Port of Oakland provide information and recommendations on ways to prevent future negative impacts on the health and mental health of residents.

I'm also asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm at 1/4 mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most affected by this expansion.

Lastly, I'm concerned that the airport expansion will lead to more vehicle traffic on Bay Farm and the main island, especially if the Port of Oakland predicts an increase in the number of passengers accessing the airport. I request that the Port of Oakland and the City of Alameda conduct studies on how current traffic patterns will change due to the expansion and what efforts will be made to prevent or minimize vehicle congestion and accidents between cars, bicycles and pedestrians.

It would be greatly appreciated if the City of Alameda could take a stronger stance in opposition to the expansion. Bay Farm residents in particular already suffer from daily noise and air pollution, and we look to you for help in safeguarding our health, mental health and homes.

Thank you for taking the time to consider my comments. I look forward to your response.

Response to Commenter P-1082

1. The commenter's opposition to the Proposed Project is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
3. The commenter's statement regarding aircraft noise shaking their home, causing stress, and disrupting their sleep is acknowledged. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK. **Sections 3.4 and 3.13** of the EIR provides an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to

the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

4. **Sections 3.4** of the EIR provides an analysis of the biological resource impacts that would occur as a result of the implementation of the Proposed Project.
5. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
6. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
7. **Sections 3.13** of the EIR provides an analysis of the traffic impacts that would occur as a result of the implementation of the Proposed Project.
8. The commenter’s statement regarding the City of Alameda is acknowledged.
9. The commenter’s statement regarding thanks for considering their comment is acknowledged.

Commenter P-1083

Flora Tso

I have already submitted my comments and attended the Alameda city Council meeting, and still believe that expansion is going to be a detriment to public safety health and pollution noise, and should not go through. Please modernize, but do not expand expansion should really be planned for farther east bay, such as Pleasanton, Dublin, where there is more room and less buildings and neighbors affected, and will also reduce traffic to the Oakland airport area.

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

3

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	4
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	5
3. Aviation is hard to decarbonize and biofuels are not the answer.	6
4. It's too much noise. More Flights= More noise.	7
5. Sea level rise threatens shoreline development.	8
6. Labor rights are at stake.	9
7. Inequity: flying is an elite privilege with high costs for everyone else.	10
8. We have alternatives. Invest in Rail.	11
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	12

Response to Commenter P-1083

1. The commenter’s statements regarding perceived impacts of the Proposed Project is acknowledged. The commenter’s opposition to the Proposed Project is acknowledged.
2. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
3. The commenter’s statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. See response to Comment #2 of this letter.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1084**Susan Tu**

Do NOT expand!	1

Commenter P-1086

Lori Turk

Sleep disturbance analysis section of Draft Environmental Impact Report indicates significant increase in average number of aircraft noise-induced awakenings (NAWR) by 2038. This analysis doesn't even cover communities further away from the airport yet still suffer from substantial aircraft noise especially from cargo planes which are allowed to operate at all hours of the night. Furthermore, these cargo planes follow narrow corridors entirely over land instead of being routed over the bay even at hours when air traffic over the bay is at an absolute minimum. The sleep disturbance analysis, noise impact analysis etc. are good first steps but they are meaningless unless the airport and FAA take concrete steps to mitigate the negative impacts revealed by these studies. The Oakland Airport should not be allowed to expand its operations and further victimize countless neighborhoods with incessant aircraft noise at all hours of the day and night unless and until it institutes a fair, effective and enforceable noise abatement policy.

1

Response to Commenter P-1086

1. The commenter's statement regarding flight paths and aircraft noise is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion on aircraft noise, see Global Response D: Noise.

Commenter P-1087

Lori Turk-Bicakci

Bad idea, we already suffer from incessant aircraft noise. Enough is enough.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

Commenter P-1091
Dr. Claire Urbanski

I would like to note the inaccessibility of the health hazard risk information for residents who will be most impacted by the development.

1

I have a Ph.D. and I could not make sense of the draft EIR report and was unable to understand just how severe the risks of cancer, non-cancerous toxins, and air pollution are estimated to be. Exposure to cancer-causing toxins and other toxins that cause severe chronic illnesses and debilitating conditions and decreased life spans should not be treated lightly. Residents living close to Oakland airport are already subjected to severe amounts of pollution. The priority of this project should be to improve air quality and decrease hazardous exposure to known toxins.

The complete disregard for human, animal, and plant life when it comes to the interests of developers and financial gain is deplorable and needs to stop being the norm.

Response to Commenter P-1091

1. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

Commenter P-1092**Silke Valentine**

We need alternatives to excessive travel with a huge carbon footprint. Reducing greenhouse gas emissions is key to the survival of the next generations. No expansions no more.	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2

5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1094
Corrine Van Hook-Turner

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

Response to Commenter P-1094

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1095**Thomas Varghese**

I am an Alameda resident living near the airport and I want to thank you for the opportunity to share comments on this project. I have three very general comments to share with you.

1

First, I strongly support this project. Oakland Airport plays a key role in the economic vitality of the Bay Area. It is crucial that we have an airport that can support the local residents, businesses and tourists. But rebuilding and renovating this airport is just the first part of the life of this airport and I urge airport leaders to think about maintaining the airport for the long term. Now I'm going out on a limb here but I would support an increase in my property tax to provide annual funds to maintain this airport every year. If airport leaders don't prepare for the future it almost would be just like buying a new house and letting it get run down and dysfunctional very fast.

2

Second, for Heaven's sake please create an airport that is attractive, efficient, and represents our outlook. I urge airport leaders not to go for the cheapest airport design here. For example, the control tower that was built here a few years ago frankly looks like a prison guard tower. Compare that to the tower at San Francisco Airport.

3

Finally, while you're thinking about this future airport, please account for the threats of climate change and especially rising sea level. The airport sits at the edge of the San Francisco Bay and is very vulnerable to tides. Thank you.

4

Response to Commenter P-1095

1. The commenter's support for the Proposed Project is acknowledged.
2. The commenter's statement about maintaining the airport for long term and increasing property tax is acknowledged.
3. The commenter's statement to create an attractive airport is acknowledged.

4. For a discussion on climate change and sea level rise, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1096

Anne Vastola

The current air traffic already causes significant negative impacts to the surrounding communities and the Port has NOT complied with previous agreements intended to reduce impacts. Planes frequently take off and land over surrounding residential communities schools, causing ongoing stress and disruptions. Violating flights include freight flights between midnight - 6am, private jets and planes, and even passenger flights.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

11

Response to Commenter P-1096

1. The Port agrees that the 1976, 2001 and 2002 agreements referred to by the commenter remain in effect. The Port continues to comply with its obligations under those agreements, including obligations associated with the Airport Noise Program. The Port disagrees with the commenter's statement that the EIR is inadequate to support any amendments to the existing agreements, or new agreements, that might arise from approval of the Proposed Project. The EIR contains detailed analyses that identify the impacts of the Proposed Project and identifies measures to reduce the magnitude of impacts to a less than significant level. These analyses could be the basis for any amendments to existing agreements or the adoption of any new agreements.

For updated information describing how the Port implements and has supplemented

- its noise commitments in the 1976, 2001, and 2002 agreements, see Global Response D: Noise.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
 3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
 4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
 5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
 6. For a discussion of aircraft noise, see Global Response D: Noise.
 7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
 8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
 9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
 10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
 11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1097**Jane Veale**

Please pause for a moment to consider the impact this expansion will have on our environment.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1098
Jane and Gordon Veale

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

1

2

3

4

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

5

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and

examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

6

7

Please do not approve the expansion proposal until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

8

Response to Commenter P-1098

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provides an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project.

Commenter P-1099**Lloyd Veitch**

Response to Commenter P-1101

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. • Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	10

Response to Commenter P-1104

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1105

10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1114**Patrick W**

What is the cost estimate for the project, and when is the projected start of construction?

1

Response to Commenter P-1114

1. The project cost is not available, and the start of construction is dependent on completion of the environmental processes.

Commenter P-1115**Julia Walsh**

Airport operations result in noise and air pollution. They affect badly those who live close to the airport and those who live up to 10 miles away. The planned increase in airport operations from the modernization and expansion will increase noise and air pollution.

1

Noise pollution worsens hypertension and heart disease and results in poor school performance.

Air pollution damages many organ systems. Air pollution takes many forms and chemicals, but probably the most damaging is fine and ultra fine particulate matter. Airplanes produce a large amount of ultra fine particles that are especially damaging. Other air pollutants include ozone, carbon monoxide, nitrogen oxides, sulfur oxides and other hazardous chemicals. Those cause cardiovascular, respiratory, and neurological problems, cancer, preterm births and shortens lives.

The damage from air pollution is worse for children, people who have underlying chronic illnesses, the elderly, and poor people. Many of the communities near the airport are SB535 Disadvantaged Communities and already suffer from some of the worst health and pollution in California.

An increase in airport operations will only make health worse.

Response to Commenter P-1115

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-1116**Julia Walsh**

Most of these flights could be substituted with rail trips

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

• Sea level rise threatens shoreline development.	7
• Labor rights are at stake.	8
• Inequity: flying is an elite privilege with high costs for everyone else.	9
• We have alternatives. Invest in Rail.	10
• We have alternatives like remote business and conferencing.	
• We need to shift towards climate-just transportation.	11

Response to Commenter P-1116

1. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.

9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. See response to Comment #1 of this letter.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1117**Julia Walsh**

Julia Walsh MD, MSc

1

I am a UC Berkeley Retired Professor of Community Health and currently a Senior Health Researcher

Airport operations result in noise and air pollution, which are linked to the poor health experienced by people living near airports. This noise and air pollution badly affects both those who live close to the airport and those who live up to 10 miles away. That would be from Emeryville to Hayward.

Noise pollution worsens hypertension and heart disease and results in poor school performance.

The most damaging air pollution is fine and ultrafine particulate matter. Airplanes produce a large amount of ultrafine particles that are especially damaging. These cause cardiovascular, respiratory, and neurological problems, cancer and preterm births.

The damage from air pollution is worse for children, people who have underlying chronic illnesses, the elderly, and poor people. Many of the communities near the airport are SB535 Disadvantaged Communities and already suffer from some of the worst health and pollution in California. An increase in airport operations will only make this worse.

So adding a terminal for more flights is bad for health.

Response to Commenter P-1117

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical

infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global Response E: Environmental Justice and Community Engagement.

Additional Comments on Appendix E. Human Health Risk Assessment DEIR for the Oakland Airport Expansion Julia Walsh MD, MSc Professor (Retired) Public Health Senior Research Scientist University of California Berkeley School of Public Health

1

In my earlier comments sent in several weeks ago, I stated that Appendix E dealt with Construction and not the increase in operations. However, the Appendix does state that the operations are included while construction going on and after construction and the TAC not increasing substantially.

The PM2.5 are summarily mentioned in E.4.2 Annual PM2.5 Concentrations. The modeling and methods used are not clear and state that these would increase by approximately 0.26 micrograms /m³. Since the flight operations are increasing substantially following the construction and these are known to be associated with an increase in ultrafine particles in the take off and landing zones, I would appreciate clearer understanding of how these were calculated. From the figures E4 and E5 I conclude that only those areas close to the airport were modelled and not flight paths. I would appreciate enlargement of this. PM 2.5 is one of the most important TAC with health impact and must be considered carefully not just in the airport but in the take off and landing areas outside of the airport.

Response to Commenter P-1118

1. Refer to Global Response F: Human Health Risk Assessment for a detailed description of the human health risk assessment. See also **Appendix E**.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

2

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

3

- Aviation is hard to decarbonize and biofuels are not the answer.

4

- It's too much noise. More Flights= More noise.

5

- Sea level rise threatens shoreline development.

6

- Labor rights are at stake.

7

• Inequity: flying is an elite privilege with high costs for everyone else.	8
• We have alternatives. Invest in Rail.	9
• We have alternatives like remote business and conferencing.	

• We need to shift towards climate-just transportation.	10

10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1120**Celia Wang**

I live on Bay Farm Island, which is within 1 mile of the Oakland airport. The noise of the departing flight is constantly as loud as 70 to 75 dB. The leaves of the bushes on my front yard have layers of black and grey particles from the jet fuel. I don't want to increase the exposure of the harmful chemicals to my family and young children. More terminals and more flights including international aircrafts will cause more frequent and intensified noise disturbances and hazardous air that pose SERIOUS threat to the residents and children. Yes to the airport modernization, but NOOO to the expansion!!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1123**Soren Warming**

More flights to and from OAK will only increase air and noise pollution. The airport have not done enough to reduce both, so why reward them with even more flights? Come back and ask when electric planes are a reality, but until then, OAK should first improve the damaged relationship with Alameda's population. Expansion? Are you out of your mind? Reduction?

Yes, please.

Commenter P-1124

Jan Warren

I live in Contra Costa County.. We have refineries that we live with in Contra Costa County and people are impacted for generations out where I live and so I don't support this expansion.. I feel like that you know we're not talking about cumulative health.. I heard people discussing why we want our customers, our passengers to be more comfortable, and yet you didn't seem concerned about your workers who were going to be impacted out there on the tarmac. They're like a you know just a casualty.. The whole idea of this renewable fuel is a -- it's a false solution.. The fossil fuel industry's doing everything they can to stay alive and we want to reduce our dependence on fossil fuel to stay alive.

1

2

3

I would suggest that if you want to do something modernize so that you want your bigger jets in here that are more efficient and can travel all the way across the country without having to stop and land, and take off, and create more pollution, go for it but we don't need more you know gates to do that. You can modernize and make it attractive for people to continue to come out here while we work on the rails and the other things that we need.

4

The majority of people if you look at statistics don't fly very much or they don't fly at all particularly if you're looking at a global economy and those that do are you know the upper ten and one percent and so all of the people who live around here are impacted to enable

5

those folks to fly more frequently.. And so I just ask you to think about everyone in this process and I guess we'll see each other again.. Thanks.

Response to Commenter P-1124

1. The commenter's opposition to the Proposed Project is acknowledged.
2. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

4. The commenter's statement about modernization is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
5. The commenter's statement regarding the global economy and the statistics of who flies is acknowledged.

Commenter P-1125

Jan Warren

I am writing to ask the Port of Oakland to acknowledge that this is not just a "modernization" project at the Oakland International Airport: it is an "expansion".

I have previously attended and spoken at one of the public meetings, an online meeting, signed a petition, and signed on as part of an org letter with Interfaith Climate Action Network of Contra Costa.

First of all, both West Oakland and East Oakland are AB 617 communities under BAAQMD disadvantaged and health impacted under CARB. The Port of Oakland recently decided to support the construction of a sand and gravel plant that will worsen the pollution in West Oakland. Schnitzer Steel had a fire in the past quarter of this year. These communities don't need additional impacts of construction and airplane combustion fuel fine particulate matter from the proposed airport expansion.

I attended a CARB meeting September 2023 on Low Carbon Fuel Standards. CARB is looking at adding pollution impacts from both airplane emissions and marine vessels. Airplane emissions have not been previously included in the State emissions. Now it will be included in take off and landing, and while flying within the state boundaries.

1

2

Airport workers from major airports in CA spoke out about the health impacts of both living close to airports and working on the ground at airports.

Let's acknowledge that frequent flying is from the well off. Since 40 million people living in CA are considered poor or living with low wages, which is exacerbated by the high cost of housing.

Modernization could take place without 16 new gates and 1,000 new parking spaces. Like BART, the Oakland Airport is expecting a growth pattern that may not happen. The Port of Oakland has managed to refinance debt and now the interest rates are substantially higher and will make it much more difficult to manage the growing debt.

The Port wants to invest in the Port of Oakland and the Oakland Airport at the same time.

The Port is working to get airplane companies to move to renewable jet fuel. Sustainable jet fuel currently accounts for less than 0.1% of the fuel used by major airlines.

Ethanol has yet to be used for aviation fuel at a commercial scale and it's not even clear whether ethanol-derived SAF will be eligible for tax breaks.

Technology is not ready to be scaled to the amounts needed. Airlines will not only be competing with other airlines, but also other industries and transportation that also needs to reduce emissions.

Net zero emission is not zero emissions. Net zero emissions in one place are balanced out by removal of CO₂ in another place, and is based on faulty promises. We will need to reduce emissions from the sources where they are created.

Our planet is already experiencing outcomes from excessive heat and climate change. Sitting on a tarmac in the blistering heat will increase costs to keep those flying comfortable. The price of flying will continue to increase due to more expensive fuel, labor costs, etc. The outcome is fewer people flying. Thus, those who can afford to fly will continue to have more negative health impacts on those who can't. Others will be looking to alternatives not to fly and reduce their number of flights.

I heard at one public meeting that short flights within the State of CA have reduced.

I ask you to seriously reconsider the magnitude of this development and the impact on disadvantaged communities in East and West Oakland who are working to reduce emissions where they live, work, and play, while at the same time you're looking to increase them.

Response to Commenter P-1125

1. The commenter's statement regarding the Proposed Project being a modernization and expansion project is acknowledged.
2. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. Also see Global

Response E: Environmental Justice and Community Engagement. Also see Global Response E: Environmental Justice and Community Engagement.

3. The Proposed Project would construct a new terminal that would include up to 25 aircraft gates in an approximately 830,000-square-foot building. The Proposed Project also includes the optimization of the aircraft gates in Terminals 1 and 2 so that each gate can operate independently. This would reduce the number of aircraft gates in Terminals 1 and 2 from 29 to 20. Thus, the Proposed Project would result in a net increase of 16 aircraft gates. The gate requirements represent the minimum number and size of gates needed to support the forecast. As stated in **Section 2.5** of the EIR, the Proposed Project is designed to accommodate the forecast market demand at industry standard levels of service. Thus, the Proposed Project is not growth-inducing because it is accommodating a demand that is forecast to occur. See also Global Response A: Aviation Forecast.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion on climate change and greenhouse gas emission reductions, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1126

Kristine Water

What studies have been done to compare the impact of North Field Maintenance time with New Expansion loads?

1

Response to Commenter P-1126

1. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The Proposed Project does not include any airfield changes at North Field. The only development proposed for the North Field is the North Field Lot for employee parking, which would have no effect on flight paths or procedures.

Commenter P-1127

Chris Weber

The noise is already so terrible please some add anymore gates

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
3. Aviation is hard to decarbonize and biofuels are not the answer.
4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-1127

1. The commenter's statement regarding noise and opposition to the Proposed Project is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of

aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1128

Lara Weber

We still haven't received the ground water report for Bay Farm which may have pollution implications. A week ago the airport was doing construction and the flight path changed to fly over Harbor Bay. It was nonstop very loud take offs and very anxiety producing. Noise pollution is a real pollution even though it is more ethereal than physical litter or chemical contamination. Paris who has been fighting climate change with its policies takes noise pollution seriously. Let's also remember the Portola Festival that caused so much upset. Don't forget the wonderful bird population (the eagles for goodness sake). It is disengeneous to encourage e-bikes and bike riding and then to push this expansion. I hope that Oakland Airport will continue to improve. Perhaps rather than expanding they can improve in other ways. We want to make Alsmeda a shining example. This unimaginative expansion is not the only way to bring business to Alameda. Why would you alienate your stakeholders?	1 2
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakand Airport expansion for these ten reasons:	3 4 5
11. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	6 7
12. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	8
13. Aviation is hard to decarbonize and biofuels are not the answer.	9
14. It's too much noise. More Flights= More noise.	10
15. Sea level rise threatens shoreline development.	11
16. Labor rights are at stake.	12
17. Inequity: flying is an elite privilege with high costs for everyone else.	13
18. We have alternatives. Invest in Rail.	14
19. We have alternatives like remote business and conferencing.	
20. We need to shift towards climate-just transportation.	15

Response to Commenter P-1128

1. **Section 3.9** of the EIR discusses groundwater resource impacts that would occur as a result of the implementation of the Proposed Project.
2. For a discussion on aircraft noise, see Global Response D: Noise.

3. **Section 3.4** of the EIR discusses biological resources and impacts to migratory birds that would occur as a result of the implementation of the Proposed Project.
4. The commenter's statement regarding the disingenuity of encouraging e-bikes and the Proposed Project is acknowledged.
5. The commenter's statement regarding wanting Oakland Airport to continue to improve and to make Alameda a shining example is acknowledged.
6. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
7. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1132
David and Treya Weintraub

We would like to thank the Port of Oakland for preparing the Draft EIR and extending the public comment period to October 16, 2023. However, given the type of project and its direct impact upon tens of thousands of people in the adjacent communities, it is requested that additional time (extension to the public comment period) be provided to allow folks to review the rather lengthy and technically driven DEIR and its associated supporting documents.

We have enjoyed living on Harbor Bay Isle, Alameda and have been residents of the Pelican Bay Homeowners Association since 1997. While the airport has been in existence before most of the planned urban developments on Bay Farm Island were built, we have come to accept the normal day to day environmental and safety impacts that comes with living in close proximity of the airport. At the time we moved to Alameda, nearly all flights day and night were tracking over the Bay. Over time, many of the flight paths have migrated towards over our neighborhood, especially the evening flights emanating from the North Field. With the Port of Oakland's plan to modernize and expand airport operations, we are concerned that the resulting increase in air traffic noise and air pollution will be made to be even more intolerable especially without definitive mitigation measures.

While the DEIR uses standardized and established federally and state mandated metrics and methodologies and tries to offer objective results and conclusions, the bottom line is that the day-to-day (and hour-by hour) impacts of noise (and air pollution) from all air traffic

taking off and landing at OAK has real negative consequences (impacts) to the social and physiological behavior of Alameda and other neighboring communities and yet the DEIR or any other form of review by the Port of Oakland does not address such “subjective” impacts. It would have been great if the Port of Oakland went beyond the usual DEIR guidelines and put the communities concerns first, ahead of the expected financial benefits from implementing the Proposed Project.

We respectfully request you accept, consider and respond to the following DEIR comments:

Report Contents:

4

The DEIR references many Appendices that are actually part of the main DEIR document and provide the supporting information used throughout the DEIR. Therefore, it is suggested that the Table of Contents be amended to include the list of the relevant Appendices.

ES.5 Environmental Impacts

5

We find the generalized statement on page 2-6 “The OAK aviation activity projected in these forecasts would occur regardless of whether the Proposed Project is implemented.” rather peculiar and baseless. This statement also appears in several other sections of the document.

Perhaps it's the way it is worded, but if this was true, then it would not be necessary to expand the number of terminals and aircraft gates. The current physical operational setup would be able to absorb the projected increase in airport passenger service and freight operations. In other words, while the current physical configuration may not be very efficient, it none the less would be able to accommodate the projected increase as forecast. Was this the intent of the statement?

The fundamental assumption that the projected aviation activity at the OAK will occur at the levels indicated in the DEIR and Appendix C Oakland International Airport Comprehensive Aviation Activity Forecast is at question. The study seems to have established PAL1 (2028) and PAL2 (2038) as definitive values without any statistical analysis (i.e., auto-correlation, level of significance, bias etc.) on the likelihood of reaching those values in the specified years.

Furthermore, the DEIR or Appendix C did not make any comparisons to other airport passenger expansion forecasts to see if the OAK forecast is in line with other expectations in the Bay Area.

6

Summary Table ES-2

Air Quality 3.3.3.3

7

The DEIR notes that the level of significance in air quality impacts from operations for NOX and ROG are potentially significant and unavoidable. For the identified mitigation measure relating to electrical infrastructure throughout the terminals and cargo area, such electrical infrastructure is already present and therefore a weak mitigation measure. Furthermore, there are various governmental programs and initiatives that require continued

electrification and energy efficiency. Therefore, claiming the use of electrical infrastructure is not a genuine mitigating action as it does not go beyond what is already required.

While the Port of Oakland does not have the authority to regulate emissions from aircraft, did the Port of Oakland consider other mitigation measures that would be in their purview? For example, possible mitigating actions could involve the following aspects:

- The “No Project” alternative
- Limit the number of aircraft take-offs or landings
- Limit the number of specific aircraft take-off and landings (i.e., aircraft using engine models having higher contributors to NOX and ROG)
- As part of the airline gate lease agreements enforce the airlines to implement lower NOX emitting engines and APUs on existing aircraft fleets
- Modify flight take-off procedures to reduce emissions (i.e., longer/slower acceleration stage)
- Use of alternative fuels such as low-carbon sustainable aviation fuel (SAF)

Greenhouse Gas Emissions 3.7.3.2

8

The DEIR notes that the level of significance in air quality impacts from greenhouse gases (GHG) are potentially significant and unavoidable. The identified mitigation measure relating to the proposed Project’s GHG emission to market-based demand and related aircraft emissions is a broad-based sweeping statement without any indication that the Port of Oakland made an attempt to avert the significant threshold.

While the Port of Oakland does not have the authority to regulate emissions from aircraft, did the Port of Oakland consider other mitigation measures that would be in their purview. For example, possible mitigating actions could involve the following aspects:

- The “No Project” alternative
- Limit the number of aircraft take-offs or landings
- Limit the number of specific aircraft take-off and landings
- As part of the airline gate lease agreements enforce the airlines to implement lower CO2 emitting engines and APUs on existing aircraft fleets
- Modify flight take-off procedures to reduce emissions (i.e., longer/slower acceleration stage)
- Use of alternative fuels such as low-carbon sustainable aviation fuel (SAF)

Noise Impacts 3.11.3.2

9

The DEIR summary section notes the impact as substantial increase in aircraft noise as less than significant and offers no mitigation measures or discussion. Noise being the number one issue of concern for nearby communities, the Port of Oakland should have provided more details in the mitigation measures section as to why they believe the noise impact is less than significant.

Section 1.1 Purpose of the EIR

10

In the first paragraph, second sentence states “Because the Proposed Project would require discretionary approvals by the Port of Oakland, the Proposed project is subject to CEQA.” Please explain what is meant by discretionary approvals with respect to the requirement for

conducting and preparing a DEIR. It would seem that the last sentence in that same paragraph regarding having significant effect on the environment would be the primary reason the Proposed Project is subject to CEQA.

The last paragraph describes the level of effort and degree of the analysis for what the EIR should include and takes into account the environmental consequences. The key as mentioned in the last sentence that the courts look for adequacy, completeness and good faith effort at full disclosure. After reading the DEIR and reviewing other reader's comments, the Port of Oakland's adequacy and good faith effort at full disclosure is definitely lacking.

For one, it does not discuss or disclose current noise issues and complaints either directly from the community to the airport through Oakland Airport Noise Hotline or through one of the local noise advocate organizations called CLASS - Citizens League for Airport Safety and Serenity. It is our understanding that the Port of Oakland publishes quarterly reports on OAK activity and a noise forum summary. None which is discussed in the DEIR.

Section 1.5 Related National Environmental Policy Act (NEPA) Review

As the DEIR mentions, the proposed project would trigger approval from the Federal Aviation Administration (FAA) and that the Port of Oakland would prepare a separate environmental review document in accordance with NEPA and other FAA and CEQ regulations. It states that the separate environmental review document will be available for public review.

Has the Port of Oakland prepared the NEPA document? Has it been available for public review?

If not, then the DEIR should not be finalized until such federal environmental review documents have been completed and reviewed by the public as there may be some impacts disclosed in such documents that have bearing on the results of this DEIR.

Section 2.3 Existing Airport

2.3.4 Airport Operations

The DEIR states that in 2019 about 6.7 million enplanements or about 13.4 million annual passengers (MAP) took place. It would be helpful if the DEIR provided a definition of "enplanement" and "general aviation" either in the same paragraph or in a separate section called Definitions. Perhaps the Glossary section can be expanded to provide more definitive definition descriptions as that section only provides abbreviations or acronyms.

Section 2.3 describes the existing OAK airport and discusses 2019 baseline and future projected activities. However, the summary does not indicate or specify the current operations capacity level. That is, without any upgrades, modifications and expansions, what is the working maximum capacity for each of the different categories of aviation operational activities. Adding such information will provide a broader perspective with respect to the Proposed Plan.

Only until Section 2.5 Project Objectives does it state under 2.5.2 Objective 2 Criteria does the DEIR indicate a design throughput of 8 to 10 million passengers per year. However, there is no other documentation or discussion presented that definitively corroborates the design throughput claim.

It is suggested to move Table 2-2 into the same Section that first references it.

Other than apparent passenger flow inefficiencies and passenger inconveniences (passenger experience) would OAK or the Port of Oakland incur any legal or other agency enforceable obligations for exceeding the Table 2-2 referenced guidelines? Is there a threshold number of annual passengers that would cause the OAK to not operate or perhaps implement an ingress and egress limitation, institute a lottery-system or other drastic measure? Would the local fire marshal order cease and desist letter because of some over-crowding threshold? In summary, the mere inconvenience or passenger experience should not be the basis for the entire expansion project rather something more substantive.

14

We do not object to the modernization and reconfiguration of the terminals and buildings to improve security, and passenger traffic flow or and even aircraft gate reconfigurations to accommodate the larger aircraft as none of those improvements would have long-term operational noise or air pollution impacts. We do however object to the plans to increase the number of aircraft gates, the building of a third terminal and the projected increase in aircraft flights.

15

Section 3.1 Introduction

16

How were the general study area boundaries determined and why does it not include all of Oakland, Berkeley, Emeryville areas? The January 2022 Scoping Period Summary identified comments received that had raised concerns about increased air pollution and noise from aircraft flights over the Oakland hills areas which are not included in the DEIR general study area boundaries.

3.3 Air Quality

17

3.3.1.1 Regulatory Context

The Regional section of the DEIR discusses the Bay Area Air Quality Management District's (BAAQMD) jurisdiction and current non-attainment status for ozone (O₃) and particulate matter (PM10 and PM2.5). While correct in stating the applicable pollutants are in non-attainment, it suggested that the DEIR or final EIR include a discussion of the different non-attainment classifications that can include the following (upon verification by the Port of Oakland's consultants):

Currently for the BAAQMD airshed, the basis for federal (EPA) ozone non-attainment are both the 2008 and 2015 8-hour ozone standard classifications. The EPA has six non-attainment classifications for ozone which are generally based on the severity of the monitored air pollutant concentrations and number of days that an area exceeds the standard. The six non-attainment classifications are Marginal, Moderate, Serious, Severe-15, Severe-17 and Extreme.

The federal ozone non-attainment classification for the BAAMQD air shed is Marginal non-attainment.

There are two federal primary standards for PM2.5 (fine particulate matter) - an annual average standard of 12.0 ug/m³ and a 24-hour average standard of 35 ug/m³. There are

two federal secondary standards - an annual standard of 15 ug/m³ and a 24-hour standard of 35 ug/m³ (the same as the primary).

For PM2.5 the federal EPA designated the BAAQMD air shed as non-attainment for the 24-hour standard and “unclassifiable/attainment” for the annual standard. There are only two non-attainment classifications for PM2.5 which are moderate and serious. For the BAAQMD the federal PM2.5 non-attainment status is moderate.

3.3.2.3 Existing Emission Associated with the Airport Project

This section describes the existing emission estimation methodology used for the baseline year 2019. It indicates that the emissions were developed using the protocols in the Air Quality Protocol included in Appendix F. Many tools are mentioned such as AEDT, OFFROAD2017, EMFAC2021, Caleemod and ACEIT that were used to develop the emissions inventory. It states that **Appendix F** would contain the emission inventory for construction and operations.

When we reviewed the Air Quality Protocol (Appendix F), it describes how the emissions will be developed and the emission factors to be used for each of the emission sources. However, the document does not provide the actual emission factors or any actual emission calculations (or examples of the calculation for each source type). For example, for the ground support equipment (GSE) it does not summarize the GSE population, ages, fuel type, horsepower, activity levels or emission factors used. For the other source types, the document does not provide similar parameters. Without this information, there is no way for us to verify to accuracy of the resulting emissions.

The remainder of Appendix F produces rather unusual and non-comprehensible (meaningless) tables (2025_.5_Months Detailed Report, 12/28/2022) that does not provide the missing information discussed above. Furthermore, the tables have Daily Summer, Daily Winter, Average Daily and Annual rows with dashes in them. Are they headings for the Unmitigated emissions values shown below each of those rows? Many of the pollutants have zeros.

There are many tables that have nothing other than just dashes in every column and row (i.e., Soil Carbon Accumulation By Vegetation Type). Seems to be just a waste of resources to include such tables especially without explanations.

We were unable to decipher the tables or match them to the descriptions in this Section. Furthermore, we were unable to find the modeling input and output and spreadsheet calculations as indicated in the last paragraph of this section.

It is unclear as to the difference in the topics discussed under Section 3.3.2.3 and 3.3.2.4 as the latter states 2019 Airport Emissions and then goes into discussions of aircraft operations but then includes GSE, Ground Access Vehicles and Stationary Sources.

3.3.2.4 2019 Airport Emissions

Table 3.3-6 shows the 2019 combined emissions from aircraft, ground service equipment, ground access vehicles and stationary source emissions. However, the table does not include CO₂; as CO₂ emissions is a contributor to GHG. We believe this table should include the CO₂ emissions from each of the source types.

Clearly, the emissions even before any modernization or airport expansion exceed the established BAAQMD Air Quality CEQA Thresholds of Significance for NOX and ROG for all but stationary sources. Yet the DEIR does not discuss this aspect and the duty for the Port of Oakland to mitigate existing significant impacts.

3.3.3.2 Operational Emissions

This section states that the operational emissions modelling input and output and spreadsheet calculations are presented in Appendix F. As discussed above, we could not find these spreadsheets. Please identify which pages (tables) in Appendix F we can find such data. Especially the emissions from aircraft.

3.3.3.3 Project Impact Assessment

For operational emissions Tables 3.3-9 and 3.3-10 representing Years 2028 and 2038 respectively, it would have been appropriate to add the Threshold of Significance (lbs/day) and (tons/yr) at the bottom of the table as was done for Table 3.3-8.

As pointed out in text format below Table 3.3-9, the daily average and annual proposed project emissions for both ROG and NOX would exceed their respective thresholds of significance (by a large margin) and is considered a significant impact.

The Mitigation Measures discussion states that if mitigation would not bring the projects impact below the applicable threshold of significance it would be considered significant and unavoidable. This is not a valid statement and should be stricken or reworded to remove “unavoidable”. It states “if mitigation would not bring a projects impact below the applicable threshold of significance” yet the Port of Oakland offers no mitigation and tries to use the electrical infrastructure idea as a mitigation measure. Such a mitigation measure is irrelevant to the emissions produced by aircraft engines. The “No Project” alternative would be the mechanism to avoid such significant threshold exceedances.

Even the net difference in emissions between years 2028 and 2038 to the baseline year of 2019 shows significant impacts. The section does not bother to even address this major issue other than a highlighted in red and a small footnote.

Conflict with or Obstruct Implementation of the Applicable Air Quality Plan

This section discusses the BAAQMD’s air quality plans and how the project would compare with such plans. The paragraph starting with “The Proposed Project supports the primary goals of the AQP because...” is unfounded and subjective and contradictory to the emission results tables just prior to this statement.

Table 3.3-13 BAAQMD Control Measures

Control Measure BL2: The Port of Oakland states that it is proposing to develop a transition plan to convert natural gas consumption to all-electric building systems. The Proposed Project would not disrupt or hinder this measure.

However, since a definitive transition plan to convert natural gas consumption to all-electric building systems has not been developed or proposed, it may be premature to claim that the Proposed Project would not disrupt or hinder this measure.

Control Measure BL3: The Port of Oakland states that the Proposed project would support market-based approaches for solution to reduce GHG emission with existing buildings as feasible. The Proposed Project would not disrupt or hinder this measure.

25

It is unclear as to how utilizing existing building would support market-based approach to reducing GHG emissions. Furthermore, the construction and operation of the airport modernization and expansion which includes more aircraft enplanements would increase GHG emissions not reduce them. Making this a hinderance to this control measure.

Control Measure BL4: The Port of Oakland states that it would assess the incorporation of cool roofing and cool paving. The Proposed Project would not disrupt or hinder this measure.

26

However, since a definitive assessment to incorporate cool roofing and cool paving has not been conducted or made public, it may be premature to claim that the Proposed Project would not disrupt or hinder this measure. Even if the Port of Oakland conducted an assessment, there is no binding obligation to actually incorporate such measure

Control Measure EN1: The Port of Oakland states that it would evaluate opportunities to develop additional on-site renewable energy production. The Proposed Project would not disrupt or hinder this measure.

27

Since a definitive evaluation has not been conducted or made public, it may be premature to claim that the Proposed Project would not disrupt or hinder this measure. Even if the Port of Oakland conducted an evaluation, there is no binding obligation to actually incorporate such measure.

Control Measure EN2: The Port of Oakland states that it would review opportunities to decrease the electricity demand however the Port of Oakland would also evaluate developing additional on-site renewable energy production. The Proposed Project would not disrupt or hinder this measure.

28

Since a definitive review has not been conducted or made public, it may be premature to claim that the Proposed Project would not disrupt or hinder this measure. Even if the Port of Oakland conducted a review and identified opportunities, there is no binding obligation to actually incorporate such measure.

Control Measure SS17: The Port of Oakland states that the project would comply with all local, state and federal regulations. The Proposed Project would not disrupt or hinder this measure.

29

There is no evidence that the port would comply with all such regulations. Where in the DEIR does the Port of Oakland identify the specific GHG regulations and especially for Best Available Control Technology. What is BACT for GHG emissions from each of the emission source types? It may be premature to claim that the Proposed Project would not disrupt or hinder this measure.

Control Measure SS20: The Port of Oakland states that the project would comply with all local, state and federal regulations. The Proposed Project would not disrupt or hinder this measure.

30

Perhaps more informative statement can be input here to verify that the Project air toxics risk assessment complies with all regulations and guidelines.

Control Measure SS25: The Port of Oakland states that the project would comply with all local, state and federal regulations. The Proposed Project would not disrupt or hinder this measure.

How would the project comply with this measure? Does the DEIR state where and what coatings, solvents, lubricants, sealants and adhesives are used. Does it state that only low-VOC or water-based coatings, sealants and adhesives would be used? It may be premature to claim that the Proposed Project would not disrupt or hinder this measure.

Control Measure SS32: The Port of Oakland states that the project would comply with all local, state and federal regulations. The Proposed Project would not disrupt or hinder this measure.

There is no evidence that the port would comply with all such regulations. Where in the DEIR does the Port of Oakland identify the specific emergency engines to be utilized or their planned locations. Does the DEIR identify that only Tier 4 engines would be used? It may be premature to claim that the Proposed Project would not disrupt or hinder this measure.

Control Measure TR2: The Port of Oakland states that it would review Trip Reduction programs. The Proposed Project would not disrupt or hinder this measure.

Since a definitive Trip Reduction program review has not been conducted or made public, it may be premature to claim that the Proposed Project would not disrupt or hinder this measure. Even if the Port of Oakland conducted a Trip Reduction program review and identified opportunities, there is no binding obligation to actually incorporate such measure.

Control Measure TR14: The Port of Oakland states that it promotes purchasing/leasing electric/hybrid vehicles. The Proposed Project would not disrupt or hinder this measure.

Although promoting electric and hybrid vehicles is a nice gesture, however the act of promotion is not a definitive enough control measure and therefore premature to claim that the Proposed Project would not disrupt or hinder this measure.

While the measure itself is targeted more regionally with many governmental agency incentive programs, there are some definitive commitments the Port of Oakland can be making to support use of renewable electricity in both ZEVs and PHEVs, with additional support for low carbon, renewable fuels in the onboard internal combustion engines in PHEVs such as:

1. Each year conduct an inventory for all OAK owned passenger vehicles,
2. Identify those vehicles that do not meet the control measure objectives,
3. Create a plan to remove and or replace those that do not meet the criteria, and
4. Incorporate the objectives outlined above within the service agreements with the companies doing business at the OAK.

Control Measure TR17: The Port of Oakland states that it would encourage and promote the use of alternative fuel such as sustainable aviation fuel use in aircraft. The Proposed Project would not disrupt or hinder this measure.

Although encouraging and promoting an important emission reducing initiative is a nice gesture, however encouragement and promotions are not a definitive enough of a control measure and therefore premature to claim that the Proposed Project would not disrupt or hinder this measure. If the Port of Oakland in its modernization and expansion plan included installation of fuel storage tank(s) designated for alternative fuels, then that would be a definitive action consistent with the control measure. Or if the Port of Oakland has been in discussions with alternative fuel suppliers or has entered into purchase agreements with such suppliers then that would be a definitive action.

Additionally, the Control Measure is based on future technology improvements in aircraft engine design and efficiency mainly through the efforts of the FAA's Continuous Lower Energy, Emissions and Noise Program (CLEEN). That program has a goal to reduce emissions of NOX by 60 to 75 percent from new commercial aircraft engines by 2023-25. The status of such engine design to meet these goals is not known at least publicly. However, if and when such engines become commercially available, the Port of Oakland should include as part of the mitigation a means of ensuring the airlines utilizing the OAK airport implement such engines on their aircraft through lease agreements or other administrative/contractual instruments. Only then can the Port of Oakland claim the Proposed Project would not disrupt or hinder this measure.

Control Measure TR19: The Port of Oakland states that it would encourage truck drivers to convert to alternative fuel. The Proposed Project would not disrupt or hinder this measure.

Although encouraging truck drivers to convert to alternative fuels may be a nice gesture, however encouragement is not a definitive enough of a control measure and therefore premature to claim that the Proposed Project would not disrupt or hinder this measure.

This control measure is specifically aimed at Medium- and Heavy Duty On-Road Trucks, including all trucks weighing more than 10,000 pounds in Gross Vehicle Weight (Classes 3-8). As such, it would include any such vehicles owned or operated by OAK and companies doing business at the OAK. Since most truck drivers do not own the truck they are driving, rather the company they work for owns the truck, it may be more appropriate to aim the encouragement towards the companies doing business at the OAK. Consistent with TR19, the Port of Oakland can implement the following definitive actions:

1. Create incentives to purchase and use newer trucks with engines that exceed ARB's 2010 NOx emission standards for heavy-duty engines, or purchase and use hybrid trucks, and zero-emission trucks,
2. Each year conduct an inventory for all OAK owned, operated or leased Medium- and Heavy Duty On-Road Trucks including trucks from companies for which OAK conducts business,
3. From the annual inventory, identify those vehicles that do not meet the control measure objectives,
4. Create a plan to remove and or replace those that do not meet the criteria, and

5. Incorporate the objectives outlined above within the service agreements with the companies doing business at the OAK and create a written OAK directive that incorporates these objectives.

Toxic Air Contaminants – Cancer Risks

The Table 3.3-14 shows incremental cancer risks for the MEI during combined construction and operation periods. However, it would be helpful to see what the actual cancer risk values are for the MEI separately for construction (peak year) and operations (peak year).

37

3.7 Greenhouse Gas Emissions

This section and the following subsections provide many regulatory initiatives and regulations targeting reductions in greenhouse gas emissions.

38

Section 3.7.1.1 Regulatory Context

This section lists and describes multiple agency initiatives aimed at reducing GHG emissions. Under the Local subsection, it discusses construction and demolition recycling of materials and specifically states that the City of Oakland requires 100 percent recycling of asphalt and concrete and 65% other construction materials. It states the Port of Oakland would implement this ordinance for the Proposed Project but stops short of describing how it would comply. Where would the materials be sent and how would the Port of Oakland administer and verify/certify that the materials would be properly recycled?

3.7.2.2 Ground Support Equipment (GSE)

This section describes the general use of electric GSE (eGSE) and that such equipment is widely available and have been adopted by airports and airlines across the country. It states that switching to eGSE would reduce GHG emissions. However, it does not indicate that the Port of Oakland plans on using eGSE or if eGSE is being utilized, this section does not indicate the current fleet makeup. If such delineation of the OAK fleet for 2019, 2028 and 2038 is identified in the DEIR, please identify which section(s) or which Appendix such data is shown.

39

3.7.3.2 Generate GHG emissions, either directly or indirectly.....

Under the Operational Emissions, the DEIR clearly identifies that the majority of the increase in GHG emissions due to aircraft engines, APU usage and GSE. GHG emissions generated from these sources offset any emission decreases from vehicle trips or stationary sources resulting in very significant increases in GHG emissions.

40

The DEIR statement that “the majority of the Proposed Project’s GHG emission increases would result from market-based demand and related aircraft emissions and the Port of Oakland does not have the authority to mitigate air pollutant emissions associated with aircraft operations. Therefore, the impact would be a significant and unavoidable.” is not an entirely accurate statement and misleading. Blaming the increased GHG emissions from aircraft on market-based demand is a guise. Furthermore, it states the Port of Oakland does have the authority to mitigate air pollutant emissions associated with aircraft operations. Yet it does not explain why it does not have such authority or layout the specific regulations that state the Port of Oakland may not have such authority. We believe that there are other

options yet to be explored to mitigate such emission increases with the main option called the “No Project” alternative for which the Port of Oakland has the authority to exercise that option. We also believe the increase in GHG emissions in counter to the various BAAQMD Regional climate Protection Strategy Resolution and the BAAQMD Clean Air Plan.

Review of Noise Assessments in DEIRs:

41

To better understand how and why the DEIR conducted the noise assessment, I researched the following aspects related to aircraft and airport noise:

- Sounds generated from aircraft
- Measurement of sound
- How aircraft sound is measured and modeled using various sound units
- FAA, EPA and Caltrans regulations

3.11 Noise and Vibration

The DEIR describes the different types of noise metrics (i.e., SEL, SENEL, DNL, CNEL) used to evaluate cumulative noise impacts. The DEIR uses the CNEL as the noise metric from which significant impacts are determined since that is the metric used by both Caltrans and the FAA in their evaluations. A CNEL value of 60 dB is the upper limit of what is considered a “normally acceptable” for residential uses.

Although noise contour maps show that there would be no residences within the 65 CNEL contour under future project-based conditions, the methodology does not account for single event noise, night-time noise, resulting in sleep disturbance and interference in regular enjoyment of indoor and outdoor environments. The fallacy of using the CNEL noise level metric in noise assessments is that the CNEL represents the average noise level over a 24-hr period and I believe it's also averaged over a year; while the human ear cannot and does not average sound. That is, we don't experience averaged hearing and therefore any noise assessment that uses averaged values will not accurately represent the actual noise impact and the resulting disturbance incurred over the time it takes for the aircraft to fly over and away from where the person is located. While peak sound may be short in duration (seconds), the duration of the aircraft flyover can be taken into account (or averaged) over the short period (up to a few minutes). The noise metric called Sound Exposure Level (SEL) may be a more appropriate parameter to describe the “single-event” noise from aircraft flyovers. While the scientific and regulatory community embraces the DNL and CNEL metric, the general public does not relate to the statistical approach in noise assessment as the annoyance of sound from aircraft overhead tends to disturb and disrupt the person's surrounding environment. So while the DEIR discusses the level of noise due to the increased flights don't go beyond CNEL contours and other guidance values, it does not evaluate the increased frequency of noise and disturbance residences will have to endure.

For existing noise disturbances, the DEIR does not recognize or acknowledge current noise complaints via the CLASS organization or complaints registered directly with the airport or FAA. In fact there is no discussion or evaluation of the historic levels of complaints and how the Port of Oakland is working (or not working) with the local communities to resolve such issues.

42

Appendix D. No Action Analysis Summary

43

This Appendix discussed the No Action alternative covered in Chapter 4 of the DEIR. The Appendix D itself does not address existing environmental impacts or future environmental impacts related to the No Action alternatives.

At the beginning of the Appendix (page 1), the statement – “The analysis of the No-Action scenario demonstrates that it is physically and operationally feasible for OAK to accommodate forecast future activity for passengers and associated aircraft operations in existing facilities with minor improvements...”

Under the **Analysis of No-Action Scenario - Key Findings** (page 4), the analysis demonstrates that PAL2 activity can be accommodated at the existing facilities using contact gates and remote hardstands.

Both of these statements attest that the No-Action scenario is a viable alternative to the Proposed Project that would be able to accommodate the projected market-based passenger demand and avoid the identified significant air quality impacts and additional noise disturbances.

While the Appendix discusses on the use of hardstands and bussing that would be required if the No Action alternative is used, it fails to provide context of the current and historical utilization of hardstands and bussing (baseline 2019 and prior years), and it focuses only on PAL 2 (2038) being the highest activity and ignores PAL 1 (2028) and any differential between the different years.

The Appendix discusses the need to use up two or so gates to accommodate the bus loops and passenger flow from the hardstands. Perhaps an alternative to that would be to enter/exit through the north end of Terminal 1, or the CBP building or the two unnamed buildings adjacent to Terminal 1. Even a minor modification to the Terminal 1 would be acceptable as it would likely not introduce any long-term environmental impacts.

Section 4 of the DEIR discusses alternatives to the Proposed Project and introduces the Three Factor Screening concept.

Under the Factor 3 Screening, the DEIR identifies 6 resource areas. However, it fails to address Noise. While the section states that there may be other environmental resources, it only lists those that are subject to laws and regulations that have requirements for the avoidance and minimization of project-related impacts or are known to be present at the Airport. Certainly, noise is an important element that should have been evaluated in this Section of the DEIR.

Under Section 4.4.6 Relocation of Operations

It states that relocating operations to an existing airport and close alternative is hypothetical because the Port of Oakland does not have the ability to dictate to an airline the airport at which it operates. This argument is not clearly understood and would like the Port of Oakland explain the rational for this statement. First, please explain why the Port of Oakland or any authority at any airport does not have the ability to dictate to an airline the airport at which it operates. Also provide the laws, regulations that collaborate this statement. It would seem that airports do have some say as OAK or the Port of Oakland sign gate lease agreements/contracts with the airlines in order for them to use the airport

and facilities. Secondly, if OAK does close, then the situation would not be hypothetical as there would be no need to dictate to an airline where it can operate as it would be obvious that the airline can no longer land or take off at a closed OAK.

Section 4.5.1.1 Environmental Impacts

The statement under Air Quality:

The majority of emissions associated with operations would result from aircraft operations and GAVs, the level of which would occur with or without implementation of the Proposed Project. The No Project Alternative could result in an additional increase in aircraft emissions due to idling while waiting for a gate to become available. Therefore, as with the Proposed Project, under the No Project Alternative impacts to air quality are considered to be significant and unavoidable (see Section 3.3, Air Quality).

We do not agree with the first sentence of the above statement for the following reasons:

1. It is unlikely that without the implementation of the Proposed Project, which includes a new terminal with 16 new gates, and modernization and reconfiguration/replacement of the existing terminals and the nearly doubling the number of passengers from 2019 levels, that such a level would be sustainable under the No Project scenario.
2. Despite the claim that the airport could accommodate the projected market-based passenger demand, we believe the outcome is self-limiting due to the constraints identified in Appendix D with respect to hardstands and busing, delays due to gate availability etc. In addition, if the passenger experience is so diminished and becomes a turn-off, then both the airlines and passengers will likely avoid OAK and utilize the other Bay Area airports.
3. Without the implementation of the Proposed Project, we believe the actual number of enplanements and deplanements will be much lower than projected. Therefore, impacts to air quality will likely not be as significant and thereby avoidable.

4.6 Environmentally Superior Alternative

We agree with the second sentence under this section that the No Project Alternative is the environmentally superior alternative.

"The environmentally superior alternative is the No Project Alternative. It would have the fewest environmental impacts but would not meet any of the project objectives".

However, the following sentence does not make sense and do not agree with the conclusion:

"The CEQA Guidelines require that if the No Project Alternative is the environmentally superior alternative, another alternative must also be identified as the environmentally superior alternative..."

Therefore, the Proposed Project is considered to be the environmentally superior alternative because it meets the five objectives outlined in Chapter 2 with the least amount of environmental impact."

Additional Alternative Thoughts

We would like to see the Port of Oakland include an alternative scenario that offers a middle ground alternative. Perhaps an alternative scenario analysis could be conducted to include modernizing and reconfiguring existing terminals 1 and 2, addition of a third terminal with only 6 new gates and another with 9 new gates, and utilizing hardstands for the remainder of flight arrivals and departures.

Again, we thank you for the opportunity to comment. We look forward to your responses. If you have any questions, please contact us.

Response to Commenter P-1132

1. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
4. The commenter's statement about including the list of appendices in the table of contents is acknowledged.
5. As shown in **Section 2.4** of the EIR, the Port developed a forecast of future aviation activity at OAK, which includes commercial airline passenger activity, as well as cargo, business, military, and general aviation activity. This forecast of future activity is quantified in terms of the number of passengers who would be expected to use OAK, the weight of cargo that would be expected to be transported through OAK, and the number of aircraft operations that would be expected to occur at OAK. The forecast also documents the types of aircraft, or fleet mix, that would be expected to be used at OAK.

The activity forecast for OAK was developed by the Port to provide informed projections of what the multiple airline and cargo operators are likely to offer (supply) in response to where people want to fly or where goods need to be flown (market demand). The forecasting methodologies are consistent with industry practice, meet FAA requirements, and are reflective of regional dynamics.

The aviation activity projected in this forecast would occur in response to market demand. This forecast was approved by the FAA on December 29, 2022. See also Global Response A: Aviation Forecast.

6. The most recent regional study of forecast air traffic for the Bay Area was completed by the Bay Area Regional Airport Planning Committee (RAPC) in 2011. This study, which analyzed multiple scenarios (including analysis of the impact of High Speed Rail on the airport system), distributed air traffic among the Bay Area airports. The study showed that OAK's share of regional air traffic demand would be between 21 and 24 million annual passengers (MAP) by 2035 (as compared to the current forecast of 24.7 MAP by 2038). Therefore, the forecast provided in **Chapter 2** is consistent with the 2011 RAPC study and considered reasonable. See also Global Response A: Aviation Forecast.
7. See response to Comment #2 of this letter. See also Global Response G: Greenhouse Gas and Climate Change and Global Response H: Alternative Fuels.
8. See response to Comment #7 of this letter.
9. See response to Comment #2 of this letter.
10. The Final EIR will go to the Board of Port Commissioners for review and certification. If the Final EIR is certified, then the Board can make a decision to approve the Proposed Project or not.
11. The Port does recognize that the public perceives the noise as being disruptive to their community. For more than 50 years, the Port has developed programs to minimize noise impacts on surrounding communities. Long before the current sophisticated noise-monitoring system was installed, airport management met regularly with aircraft operators, the FAA, and community representatives to develop noise abatement procedures. Today the Port continues to meet with these groups in order to find ways to balance various concerns, such as noise and other environmental issues, while maintaining safety as its number one priority. In addition, pilot education continues to be an important part of the Port's noise abatement program. However, because the Proposed Project would not result in a significant impact related to aircraft noise, mitigation measures are not required or warranted. See also Global Response D: Noise.
12. The FAA indicated to the Port that NEPA documentation will be completed after the completion of the CEQA process. This decision was made by the FAA as the federal lead agency. The NEPA process will include additional public outreach and opportunities for public comment.
13. The commenter's statement about moving the location is acknowledged; however, no change to the EIR was warranted.
14. As stated in **Section 2.5.1** of the EIR, Terminal 1 does not meet current California Building Code with respect to structural design and earthquake loads. In addition, Terminal 1 does not meet current fire protection requirements. **Section 4.4.2** of the EIR provides an analysis of retaining Terminal 1 and why this alternative is not viable for implementation. See also Global Response I: Alternatives. **Section 2.5** of the

EIR documents the sources that the Port used to identify industry standard levels of service.

15. Any alternatives that contemplated fewer gates and corresponding holdrooms and passenger processing facilities than identified for the Proposed Project would not meet the level of service criteria because it would not provide OAK with industry standard levels of service and, therefore, were not considered for further evaluation in the EIR. The EIR includes a reasonable range of alternatives to the Proposed Project. Also see Global Response I: Alternatives.
16. Two study areas were developed for use in this EIR: a general study area (see **Figure 3-1**) for analysis of impacts that could extend beyond Airport property, and a detailed study area (see **Figure 3-2**) for impacts that would be more likely to occur within the direct footprint of the Proposed Project. The general study area (**Figure 3-1**) was developed by starting with the Airport's 65 decibel (dB) noise contours and extending the boundary out to International Boulevard to the north and east and CA-92 to the south.
17. **Appendix E** of the EIR presents the air quality emission calculations for human health risks, and **Appendix F** provides the Air Quality Protocol. The air quality assessment was conducted in accordance with FAA guidelines for assessing environmental impacts and BAAQMD 2017 CEQA Guidelines. Operational emissions from aircraft were estimated using the FAA AEDT model and are discussed in **Section 3.3.2.3** of the EIR and in the Air Quality Protocol in **Appendix F**. Mitigation measures for air quality are discussed in **Section 3.3.3** of the EIR. Construction and aircraft operational BMPs and mitigation measures to reduce emissions are discussed in **Section 3.3.3.3**. As discussed, no additional aircraft operational emissions are expected compared to the No Project Alternative. Any additional emissions associated with the No Build Alternative and the Proposed Project when compared to the existing conditions are based on forecast market demand and would occur regardless of the Proposed Project.
18. For a detailed description on the calculations used in the models, refer to "Appendix C, Emission Calculation Details for CalEEMod," available at https://www.caleemod.com/documents/user-guide/04_Appendix%20C.pdf and "Aviation Environmental Design Tool (AEDT) Version 3e Technical Manual," available at https://aedt.faa.gov/Documents/AEDT3e_TechManual.pdf.
19. See responses to Comments #17 and #18 of this letter.
20. CO₂ calculations are related to greenhouse gas emissions, so they are presented in **Section 3.7**.
21. Operational emissions detail sheets are provided following the construction emissions detailed sheets in **Appendix F**.
22. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and

aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Section 4.3 of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business.

Any alternatives that contemplated fewer gates and corresponding holdrooms and passenger processing facilities than identified for the Proposed Project would not meet the level of service criteria because it would not provide OAK with industry standard levels of service and, therefore, were not considered for further evaluation in the EIR. The EIR includes a reasonable range of alternatives to the Proposed Project. Also see Global Response I: Alternatives.

23. The commenter's statement about the determinations made in **Section 3.3** is acknowledged.
24. See response to Comment #2 of this letter. The Proposed Project would not preclude any initiatives identified in **Section 3.3**. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. See also Global Response G: Greenhouse Gas and Climate Change.
25. The Proposed Project would not preclude any initiatives identified in **Section 3.3**. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
26. The Proposed Project would not preclude any initiatives identified in **Section 3.3**. See also Global Response G: Greenhouse Gas and Climate Change.
27. The Proposed Project would not preclude any initiatives identified in **Section 3.3**. See also Global Response G: Greenhouse Gas and Climate Change.
28. The Proposed Project would not preclude any initiatives identified in **Section 3.3**. See also Global Response H: Alternative Fuels and Global Response G: Greenhouse Gas and Climate Change.

29. The Proposed Project would not preclude any initiatives identified in **Section 3.3**.

See also Global Response G: Greenhouse Gas and Climate Change.

30. The Proposed Project would not preclude any initiatives identified in **Section 3.3**.

See also Global Response G: Greenhouse Gas and Climate Change.

The HHRA, included as **Appendix E** of the EIR, is presented in a typical format for HRAs produced to support environmental documents, providing a brief introduction and description of the project being assessed (Page E-1), a summary of the general analysis approach and objective (Page E-2), a detailed methodology including references to the CalEPA, USEPA, and BAAQMD guidance for the evaluation of health risks from air emissions, TAC of concern selection criteria and rationale, descriptions of analyzed populations and exposure pathways, exposure parameters for each analyzed population, a robust description of toxicity parameters for all TAC of concern, and explanations of how the aforementioned parameters would be utilized to estimate individual exposures and maximum impacts (Pages E-3 through E-19). Only at the end of the methodology discussion (starting on page E-16) are risk thresholds discussed in the context of how individual exposure and maximum impacts would be assessed.

As referenced in the HHRA on page E-3, BAAQMD has established guidance for the evaluation of project-level project-individual and cumulative TAC exposure. This guidance includes quantitative risk thresholds for use in the context of CEQA, against which risk increments are compared in the HHRA. BAAQMD has included project-level TAC risk thresholds, including thresholds for carcinogenic risks, in their CEQA guidance since at least 1999.

The use of USEPA's AERMOD model for dispersion modeling for the development of local concentrations for the evaluation of health risk assessment is standard industry practice and is specified by CalEPA OEHHA guidance for the evaluation of human health risks.

31. The Proposed Project would not preclude any initiatives identified in **Section 3.3**.

See also Global Response G: Greenhouse Gas and Climate Change. Standard construction BMPs are also identified in **Sections 3.8 and 3.9** of the EIR.

32. The Proposed Project would not preclude any initiatives identified in **Section 3.3**.

See also Global Response G: Greenhouse Gas and Climate Change.

33. The Proposed Project would not preclude any initiatives identified in **Section 3.3**. As stated in **Section 3.13** of the EIR, the Proposed Project would not have a significant effect on vehicle miles traveled (VMT) and transportation demand management (TDM) programs are not included in the Proposed Project. OAK does provide infrastructure and encourage alternate modes of transportation such as bike paths leading to the airport, bike parking, and the BART connector. The Port will assess TDM strategies during design of the Proposed Project and incorporate measures as feasible.

34. The Proposed Project would not preclude any initiatives identified in **Section 3.3**.
See also Global Response G: Greenhouse Gas and Climate Change.
35. The Proposed Project would not preclude any initiatives identified in **Section 3.3**.
See also Global Response G: Greenhouse Gas and Climate Change and Global Response H: Alternative Fuels.
36. The Proposed Project would not preclude any initiatives identified in **Section 3.3**.
See also Global Response G: Greenhouse Gas and Climate Change and Global Response H: Alternative Fuels.
37. See **Appendix E** for additional detail related to the human health risk assessment.
The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. See also Global Response F: Human Health Risk Assessment.
38. See Global Response G: Greenhouse Gas and Climate Change for a discussion of GHG measures at the Airport.
39. None of the GHG measures were taken into account during the preparation of the EIR, thus overstating estimates of effects. See Global Response G: Greenhouse Gas and Climate Change for a discussion of GHG measures at the Airport.
40. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
41. As described in **Sections 3.11.1.1 and 3.11.1.2** of the EIR, the FAA requires the use of CNEL analysis for assessing noise impacts related to aviation noise. As described in **Section 3.11.1.4** of the EIR, the Aviation Environmental Design Tool (AEDT), which is the model approved by the Federal Aviation Administration (FAA), takes into account all aircraft operations arriving and departing out of OAK as well as the time of day the operation is occurring. The model utilizes aircraft profiles to calculate noise emissions throughout an aircraft's flight track. See Global Response D: Noise for more information.
42. The Port continues to comply with its obligations associated with the noise abatement program and will document the Port's continued commitment to the

program. For updated information describing how the Port implements and has supplemented its noise commitments, see Global Response D: Noise.

43. **Chapter 4** of the EIR provides a discussion of alternatives to the Proposed Project, including a No Project Alternative, which is considered to be an alternative to the Proposed Project in conformance with Section 15126(d) of the CEQA Guidelines. The EIR evaluates alternatives to accommodate the increase in enplanements and aircraft operations that would occur with or without the implementation of the Proposed Project. Each alternative is analyzed for the ability to meet most of the basic project objectives while avoiding or lessening significant environmental effects. Thus, the EIR identifies and analyzes the range of alternatives available to the Port. See also Global Response I: Alternatives.
44. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast.
45. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
46. The commenter claims that the EIR fails to identify an environmentally superior alternative because the Proposed Project, by definition, cannot be the environmentally superior alternative. This is incorrect. See *Save Our Access-San Gabriel Mountains v. Watershed Conserv. Authority*, 68 Cal. App. 5th 8, 18 (2021) (upholding an EIR that fully analyzed only the proposed project and the no-project alternative, and identified the proposed project as the environmentally superior alternative).

An EIR is required to assess a reasonable range of alternatives to a project as outlined in CEQA Guidelines Section 15126.6. The alternatives must potentially meet most of the project objectives and avoid or substantially lessen potentially significant environmental impacts associated with the project. CEQA also requires that an EIR assess the No Project Alternative, providing an assessment of what would reasonably be expected to occur if the project were not implemented. In compliance with these requirements, the EIR identified eight alternatives, including the No Project Alternative, and specifically identified that the No Project Alternative is the environmentally superior alternative. However, given CEQA's mandate in these circumstances to identify another alternative, the Proposed Project was identified as environmentally superior to the action alternatives evaluated in the EIR.

Notably, the Port, in considering these potential alternatives (described in **Section 4.4** of the EIR), ultimately dismissed each of them from further evaluation for one or more of the following reasons: (1) they would not sufficiently meet most of the project objectives; (2) they were determined to be infeasible; or (3) they would not avoid or substantially reduce one or more potentially significant impacts under the Proposed Project. The Port did not identify any other feasible alternatives that would meet most of the project objectives and avoid or substantially lessen potentially significant environmental impacts.

47. The Proposed Project would construct a new terminal that would include up to 25 aircraft gates in an approximately 830,000-square-foot building. The Proposed Project also includes the optimization of the aircraft gates in Terminals 1 and 2 so that each gate can operate independently. This would reduce the number of aircraft gates in Terminals 1 and 2 from 29 to 20. Thus, the Proposed Project would result in a net increase of 16 aircraft gates. The gate requirements represent the minimum number and size of gates needed to support the forecast. As stated in **Section 2.5** of the EIR, the Proposed Project is designed to accommodate the forecast market demand at industry standard levels of service. Thus, the Proposed Project is not growth-inducing because it is accommodating a demand that is forecast to occur. See also Global Response A: Aviation Forecast.

Commenter P-1133

Ron Weisberg

Flying is a prime contributor to greenhouse emissions and climate change. We must limit flying not expand it.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-1133

1. The commenter's statement regarding flying as a prime contributor to greenhouse gas emissions and climate change is acknowledged. The Port does not have the authority to require air travelers to use other modes of transportation.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1134**Alex Weiss haus**

All California communities need to replace dependence on Air Travel Industries with local, ecosustainable, vital solutions. Municipal boards in all fields must devote themselves to this goal to present the world with a model, whole solution to the human-driven Sixth Extinction. Thank you for your consideration of California's position as one of the exemplary cradles of Conservation and Wilderness Protection!

Commenter P-1135

Bella Weksler

As a student and frequent user of the OAK airport I do not support this expansion project. Flying is already a huge emitter of carbon and contributes to climate change. I do not encourage more flying. Especially when this project will result in environmental injustice to people underserved in the Oakland community.

1

2

Response to Commenter P-1135

1. The commenter’s statement regarding being a frequent user of OAK and regarding opposition to the Proposed Project is acknowledged.
2. The commenter’s statement regarding not encouraging more flying is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. For a discussion on

environmental justice, see Global Response E: Environmental Justice and Community Engagement.

Commenter P-1136

Elias Welsh

The community of East Oakland suffers from a massively Disproportionate amount of detrimental health factors stemming from environmental and economic racism- and as you know airports are never located very close to high income communities due to noise/other environmental factors. For these reasons, expanding Oakland airport is merely COMPOUNDING the indefensible damages and injustice already inflicted on that community-a community w a very high proportion of Families w children and that is extremely diverse (but w a relatively small % of white people vs more affluent communities nearby).?Coincidence?? Not even a little bit. But if Anybody Already Knows *Everything* above -as Port of Oakland Board of Commissioners- it's YOU! Your ACTIONS/Decisions on this matter will be as Eloquent and Candid a Reflection of the *Content of Your Actual Characters* as possible. We are extremely politically active and involved. If You put Profits Before People we will Curtail your careerism, Quickly?

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1137**Matt Wheeland**

I am strongly opposed to expanding the Oakland Airport - more flights mean more greenhouse gas emissions, which means more global warming, and as someone who lives about six feet above sea level, I am profoundly concerned with increases in planet-heating air travel.

1 2

In addition, increasing traffic into the airport by plane will bring more pollution from planes, from trucks delivering fuel and supplies to the airport, and from passenger vehicle traffic to the airport. The communities that surround the airport are already suffering from traffic-related health and economic crises and more air travel will only make that worse.

3

We need less flying, not more. Please do not expand Oakland Airport!

Response to Commenter P-1137

1. The commenter's opposition to the Proposed Project is acknowledged.
2. For a discussion on global warming, see Global Response G: Greenhouse Gas and Climate Change.
3. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

Commenter P-1138 **Matt Wheeland**

I am strongly opposed to the expansion of Oakland Airport. It will increase noise, traffic, and pollution in the communities surrounding the airport – including mine – and will greatly increase the greenhouse gas emissions in the region at a time when we desperately need to do less flying, not more.

1 2

Response to Commenter P-1138

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Section 3.3, 3.11, and 3.13** of the EIR discuss the air quality, noise, and traffic impacts. No significant air quality, noise, or traffic impacts would occur as a result of the implementation of the Proposed Project. For a discussion on greenhouse gases, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1139 **Carol White**

Save the environment

Commenter P-1143**Richard White**

We live in Alameda's Bay Farm section, close to the OAK Airport. At times, due to wind conditions, planes take off right over our home, and the noise is very loud and annoying. Sometimes this happens during the night, when we are trying to sleep. We are really against OAK expansion due to the noise and the harm to the environment that would result from the pollution.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

- Aviation is hard to decarbonize and biofuels are not the answer.

5

- It's too much noise. More Flights= More noise.

6

- Sea level rise threatens shoreline development.

7

- Labor rights are at stake.

8

- Inequity: flying is an elite privilege with high costs for everyone else.

9

- We have alternatives. Invest in Rail.

10

- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

11

Response to Commenter P-1143

1. The commenter's statement regarding noise from planes taking off over their home and regarding opposition to the Proposed Project is acknowledged. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical

infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port’s GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter’s concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter’s statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1144

Richard White

We live in Bay Farm in Alameda at 3008 Cerro Vista in the Casitas HOA development). At times when the wind is coming more from the north, big commercial jets take off at low altitude (only a few hundred feet) right over our house and since the planes take off every 10 minutes or so all day starting at 6:00 AM and continue until evening, the noise is intolerable. Normally when the wind is more out of the west, planes take off from a different runway and over the water of the Bay and the noise is not as bad. We are completely against OAK expansion because the noise pollution is so bad now that it adversely affects property values in Bay Farm.

1

Response to Commenter P-1144

1. The commenter’s statement regarding noise from commercial jets taking off over Bay Farm is acknowledged. For a discussion on aircraft noise, see Global Response D: Noise.

Under CEQA, potential effects from implementing a project, such as reductions in

property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

Commenter P-1145

Richard White

We live in Alameda's Bay Farm section, close to the OAK Airport. At times, due to wind conditions, planes take off right over our home, and the noise is very loud and annoying. Sometimes this happens during the night, when we are trying to sleep. We are really against OAK expansion due to the noise and the harm to the environment that would result from the pollution.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

Response to Commenter P-1147

1. The commenter's statement regarding living under the flight pattern and staying in the community despite the noise from aircraft is acknowledged.
2. The commenter's opposition to increasing the size of and air traffic at OAK is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at

OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.

3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

I live under the flight pattern. The last several years there has been increased airplane activity. I love this community so I stay here despite the noise from the airplanes which has

1

been disruptive to my sleep and sometimes peace of mind. Also I use Oakland airport when I can because it's less chaotic therefore less stressful than flying in and out of larger airports. Bigger is not always better I strongly recommend not increasing the size and air traffic through this airport because of its impact on the community. I live just in front of oakland airline departure lanes. On September 22 lanes that normally aren't used were put in use due to maintenance work on the regular lines. I was awakened at 6am from the sonic noise coming from a plane flying directly over my house. I have dual paned windows but the noise was still deafening. And the planes continued coming at frequent intervals. The noise was so loud at each fly over that I couldn't even hear the music I had put on to help me relax. I couldn't fall asleep again. Besides all the other side affects my objection is based on a deterioration of life if these plane lanes are used during an expansion. The planes are so close because of my proximity to take off and the noise is so loud and disruptive. My house should be my sanctuary and my ability to sleep in my house should be a given. The airplane noise has taken this away from me and my neighbors. Please deny the expansion due to the negative mental and physical effects it has on people.

13. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1149**Neil Wilson**

The DEIR is inadequate:

I want to point out two major deficiencies. The first concern is noise pollution. During the period starting on 9/22/2023 through 9/25/2023, I had airliner after airliner taking off directly over my home on Mecartney Road in the Garden Isle Home Owners' Association. I could not hold a conversation, either in person or on my phone, because of the noise. I also could not work nor enjoy music or television. That was my personal experience.

If you want scientific evidence, there is a sound monitoring microphone located at the Garden Isle Clubhouse at 1060 Melrose Ave. This information should be acquired during your investigation. This could be a preview of the future if these planes are allowed to use the North Field. Commercial aircraft should not be allowed to overfly residential areas during departures or arrivals.

The second concern is air pollution. The air monitoring sites referenced in the draft are not relevant. They are too far away. A site is needed on Bay Farm Island, adjacent to the airport, which would provide much more accurate data measuring airplane generated air pollution. My personal experience is that I can see the soot and smell the odor caused by jet exhaust. It's time to get the scientific data now before further jeopardizing our health and safety. The Oakland Terminal Modernization and Development Project should not be allowed to proceed until these issues are resolved.

Response to Commenter P-1149

1. The commenter's statement regarding not being able to hold a conversation, work, or enjoy music or television due to aircraft noise is acknowledged. For a discussion on aircraft noise, see Global Response D: Noise. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement regarding being able to see soot and smell the odor caused by jet exhaust is acknowledged. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

Commenter P-1150**Kristy Winn**

Response to Commenter P-1153

- The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
- For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
- Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
- For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
- For a discussion of aircraft noise, see Global Response D: Noise.

6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1154**Pete Woiwode**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.
- We have alternatives. Invest in Rail.
- We have alternatives like remote business and conferencing.
- We need to shift towards climate-just transportation.

We live by 9th and Haight in Alameda. There are times when planes fly slowly overhead mostly I believe when cloud cover is low. The problem is I believe they dump fuel due to the smell in the air. My wife and I both have had cancer, along with several neighbors. We like the airport nearby, but sound is not the only issue. There needs to be a stop of dumping fuel over inhabited areas. This is a public health issue.

1

Response to Commenter P-1156

1. The commenter's statement about dumping fuel is acknowledged.

Commenter P-1157**Dorothy Wonder**

Let us strongly support high speed rail and other alternatives,

Amy Wong

WHO:

The proposed expansion of Oakland Airport would greatly impact those who work or reside near the airport, particularly residents on Bay Farm Island and the East End of Main Island in Alameda.

1

WHAT:

Oakland Airport is in the planning process of modernizing and constructing a new terminal to increase the number of gates by 50%. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

2

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remains underexamined (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultraparticles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, pre-term births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

3

We are asking that:

4

-
-
- The Port of Oakland
- and the City of Alameda conduct technical, *localized*
- studies that are independently verified that include noise and air quality sensors on Bay Farm Island at $\frac{1}{4}$ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured
- and examined. This is entirely missing in the current DEIR. This will allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.
-
-

- The Port of Oakland
- explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.)

5

-
-
-
- The City of Alameda
- takes a stronger stance in opposition to the expansion. Their current response is disappointingly neutral and lacks the strong dissent of their citizens.
-

6

WHEN:

NOW is the time to act because the public review period for the Draft Environmental Impact Report (DEIR) ends on Monday, October 16th at 5PM PST.

Response to Commenter P-1158

1. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
2. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and

cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

4. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.

Commenter P-1159

Amy Wong

To the Attention of the Port of Oakland, Oakland Airport and City of Alameda,

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity.

With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at 1/4 mile increments from each of the existing OAK airport runways. For air

1

2

3

4

5

quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

6

7

Please extend the October 16 deadline until proper due diligence has been done and these Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

8

Response to Commenter P-1159

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and

cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

5. 6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-1160

Amy Wong

I live on Bay Farm Island, which is within 1 mile of the Oakland airport. The noise of the departing flight is constantly as loud as 70 to 75 dB. The leaves of the bushes and my garden on my backyard yard have layers of black and grey particles from the jet fuel. I don't want to increase the exposure of the harmful chemicals to my family and young children. More terminals and more flights including international aircrafts will cause more frequent and intensified noise disturbances and hazardous air that pose SERIOUS threat to the residents and children. Yes to the airport modernization, but NOOO to the expansion!!

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

3

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

4

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

5

3. Aviation is hard to decarbonize and biofuels are not the answer.

6

4. It's too much noise. More Flights= More noise.

7

5. Sea level rise threatens shoreline development.

8

6. Labor rights are at stake.

9

7. Inequity: flying is an elite privilege with high costs for everyone else.

10

8. We have alternatives. Invest in Rail.

11

9. We have alternatives like remote business and conferencing.
--

10. We need to shift towards climate-just transportation.

12

Response to Commenter P-1160

1. The commenter's statements regarding perceived impacts of the Proposed Project is acknowledged. **Table 3.11-12** of the EIR shows that no housing units are within the 65 dB CNEL noise contour associated with aircraft operations at OAK. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
2. The commenter's opposition to the Proposed Project is acknowledged.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1161**Helen Wong**

As someone living 2 miles from Oakland International Airport and directly under the airplanes flight plan, I oppose the OAK expansion. Over the last 5 years, there have been constant flight noise and pollution while OAK tells us they are being cognizant about their neighbors. Pilots fly as low as they want, day and night, without recourse. On hot days and night, we have to choose between open the windows to let cool air in and suffer airplane noise, or keep the windows close and the house stuffy so we can sleep. OAK needs to consider their neighbors, provide reassurance that flights will not go over Harbor Bay Isle, and do more to combat noise pollution and air pollution. There are literally layers of ash on our property when flights are too low to the ground. [Please do not support OAK expansion.]

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

Response to Commenter P-1161

1. The Port does not have authority to regulate flight paths and procedures. Federal regulations, enforced through the FAA and TSA, have authority over aspects of air travel including passenger safety and transportation security. Federal regulations require certification of airports, pilots, and aircraft. Operators are required to maintain safe premises and enforce security measures. However, airlines retain control over pricing, destinations or markets served, flight frequency, or types of aircraft flown.

The Port does recognize that the public perceives the noise as being disruptive to their community. For more than 50 years, the Port has developed programs to minimize noise impacts on surrounding communities. Long before the current sophisticated noise-monitoring system was installed, airport management met regularly with aircraft operators, the FAA, and community representatives to develop noise abatement procedures. Today the Port continues to meet with these groups in order to find ways to balance various concerns, such as noise and other environmental issues, while maintaining safety as its number one priority. In addition, pilot education continues to be an important part of the Port's noise abatement program.

30. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
31. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
32. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

35. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
36. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
37. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.

38. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

2. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1162

Joanne Wong

WHO:

The proposed expansion of Oakland Airport would greatly impact those who work or reside near the airport, particularly residents on Bay Farm Island and the East End of Main Island in Alameda.

1

WHAT:

Oakland Airport is in the planning process of modernizing and constructing a new terminal to increase the number of gates by 50%. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents. Neighborhoods closest to the South Field runway *already* experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

2

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remains underexamined (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultraparticles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, pre-term births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

3

We are asking that:

-
-
- The Port of Oakland and the City of Alameda conduct technical, *localized*

4

- studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured
- and examined. This is entirely missing in the current DEIR. This will allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

-
-
-

- The Port of Oakland explores ALL other potential options to mitigate noise and air pollution
- impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.)

5

-
-
-

- The City of Alameda takes a stronger stance in opposition to the expansion. Their current
- response is disappointingly neutral and lacks the strong dissent of their citizens.
-

6

WHEN:

NOW is the time to act because the public review period for the Draft Environmental Impact Report (DEIR) ends on Monday, October 16th at 5PM PST.

7

Response to Commenter P-1162

1. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
2. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social

and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
4. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-1163

Marvin Wong

I wish you who are the decision makers would be living here to experience the awful flight noise, not to mention the pollution. Why can't people who are in power to stop this expansion, decide in favor of people's welfare instead of profits? Grace over Greed?	1 2
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	3
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	4
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	5
3. Aviation is hard to decarbonize and biofuels are not the answer.	6
4. It's too much noise. More Flights= More noise.	7

5. Sea level rise threatens shoreline development.	8
6. Labor rights are at stake.	9
7. Inequity: flying is an elite privilege with high costs for everyone else.	10
8. We have alternatives. Invest in Rail.	11
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	12

Response to Commenter P-1163

1. The commenter's statement regarding wishing the decision makers to experience the awful flight noise and pollution is acknowledged.
2. The commenter's opposition to the Proposed Project is acknowledged.
3. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
5. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
6. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
7. For a discussion of aircraft noise, see Global Response D: Noise.
8. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
9. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
10. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
11. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the

Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1164

Rufina Wong

Expansion of Oakland airport will seriously harm our health, deteriorate our quality of life even more, cause even more pollution and can cause many other harmful impacts to the community!!

1

It is likely none of the decision makers who are in the position to vote yay or nay, or in the position to influence the expansion plan do not live in any of the communities near the Oakland Airport. Although you may not be affected negatively by this expansion plan. MANY OF US WILL!! PLEASE BE Considerate and listen to all the concerns raised by those who will be negatively impacted by the proposed Oakland Airport Expansion plan!!

2

PLEASE DO NOT move forward with this expansion plan!!!

Response to Commenter P-1164

1. The commenter's statements regarding perceived impacts of the Proposed Project is acknowledged. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.
2. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-1165

Cherlene Woodcock

We know it is the mining, transport, and burning of fossil fuels that drive the climate crisis. We know that jet fuel is extremely dirty and pollutes the upper atmosphere. It makes no sense at all to expand the Oakland airport and shows a disregard for future generations that is appalling.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakand Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.

6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the

Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1166

Charlene Woodcock

As a person long concerned with the major contribution to the climate crisis by the fossil fuel industry, and a 56-year resident of the SF Bay Area, I write to express my strong opposition to an expansion of the Oakland Airport.

1

It was once an appropriate size for this area, comfortable to use, and its contribution to Bay Area pollution thus limited. But it has already expanded beyond that size and its flights spread toxic pollution from leaded jet fuel over the poorest areas of the East Bay.

2

To further expand and further contribute to the pollution of this beautiful place we love is unjustifiable. It is based on financial speculation rather than need and it will contribute to the reduction of quality of life in the Bay Area by adding to the pollution of air and water, by adding to the noise pollution both around the airport and overhead.

We all need to do LESS, not more, flying if our children are to be spared the most damaging aspects of the climate crisis. There is no way to expand the airport without increasing its contribution to the climate crisis.

3

Response to Commenter P-1166

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
3. For a discussion on the climate crisis, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1167

Amy Woodridge

I understand that we chose to live near an airport. However, there is increased data showing the hazardous particles that pollute our air. There are several schools in the

1

immediate flight path in Alameda. Expanding the number of flights would be detrimental to the health of thousands of children.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 2

Commenter P-1168

Greg Woods

With the proposed 50% expansion, the increased occurrences of noise disturbance is one thing, the worse air quality is even more alarming. Take a look at the layers of black and grey particles on tree leaves. Breathing in 50% more jet fuel chemicals will be a SERIOUS health hazard. The Port of Oakland's Draft Environmental Impact Report fails to include any actual noise and air monitoring on Bay Farm Island. Please be responsible and conduct proper technical monitoring before proceeding with any expansion planning.

Commenter P-1169
Russell Worth

Do NOT expand the airport during a climate crisis. I will not make any flights to the Oakland Airport.

1

Response to Commenter P-1169

1. The commenter's opposition to the Proposed Project is acknowledged.

Commenter P-1170
Susan Wright

I strongly oppose the expansion of OAK. Contrary to the draft EIR, the expansion will lead to greatly higher demand and use of the Oakland airport (Induced Demand!) mostly for short-haul flights. It is disingenuous to claim that growth would occur anyway without the Project. Most of this traffic would be better served by high speed rail, eliminating almost all of the additional air and noise pollution of even more frequent flights across Oakland and Alameda. The California High Speed Rail and Brightline West networks can greatly improve the options for most travelers, and merit increased consideration and support by local politicians who are clamoring for the expansion of OAK.

1 2

3

In the interests of climate justice, do not allow even more particulate matter and excessive, stressful noise to pollute the low-income neighborhoods surrounding the airport as well as

4

other nearby communities. Please take these comments into consideration when reviewing the draft EIR. Thank you.

Response to Commenter P-1170

1. The commenter's opposition to the Proposed Project is acknowledged.
2. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
3. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
4. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on impacts to low-income neighborhoods, see Global Response E: Environmental Justice and Community Engagement.

Commenter P-1171

Susan Wright

This is the wrong direction for Oakland. We need more efficient use of the transit we already have, more alternatives to air travel, particularly for short flights, and much more innovation to reduce carbon emissions. The negative local effects of a busier airport greatly out way any gains in convenience or economic matters, and are a much heavier burden on communities that are least likely to gain any advantage at all ..

1

2

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

12. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1172**Susan Wright**

I strongly oppose the expansion. I have no problem with the sort of a beautification effort but adding more terminals would indeed lead to greater and higher demand and use of the Oakland airport in allowing principles of induced demand mostly for short haul flights which is what this airport is mostly used for.. So I think it's disingenuous to claim that growth would occur anyway without the project.· The increased capacity would encourage more passengers and airlines would greatly increase the number of flights daily causing ever more harm to surrounding communities that already suffer massive environmental injustice not just from the airport but from freeways and other aspects of our local landscape.. The increased noise pollution and small particle emissions will harm the health and well-being of families that are already coping with excessive traffic and Port-induced pollution to see an audience of a major consideration and other scenarios for meeting demand for travel especially for shorter haul distances including high-speed rail.

1 2

We have a climate crisis but we haven't yet convinced officials that we have to change our ways. Airports may not be able to control airlines but they do attract them and the more terminals, the more airlines, and the more planes will be flying.. So for that reason I would like to disagree with the idea that more terminals are necessary and strongly oppose the idea of adding terminals.. Thank you.

3

Yuan Xu

Your expansion is destroying the quiet neighborhood!	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7
6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-1173

1. **Section 3.11** of the EIR provides an analysis of noise impacts. No significant noise impacts would occur as a result of the implementation of the Proposed Project.

2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1174**We Ya**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

1

2

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	3
3. Aviation is hard to decarbonize and biofuels are not the answer.	4
4. It's too much noise. More Flights= More noise.	5
5. Sea level rise threatens shoreline development.	6
6. Labor rights are at stake.	7
7. Inequity: flying is an elite privilege with high costs for everyone else.	8
8. We have alternatives. Invest in Rail.	9
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	10

Commenter P-1178
Sue Yascolt

I really enjoy using OAK when possible. I wish we could win back American and United. Is updating the terminals the key? I was SO pleased to be able to take Delta to my family reunion in Michigan even though I had to change planes both coming and going. OAK is so much more convenient than SFO.

1

Also, please make sure the handicapped facilities are available. The BART connector to the airport isn't great. (Too far to walk to terminal)

2

Response to Commenter P-1178

1. The commenter's statement in regards to enjoying using OAK is acknowledged.
2. The commenter's statement regarding making sure handicapped facilities available is acknowledged.

Commenter P-1179
Anny Yee

I do not support the expansion of the Oakland Airport due to the significant impact of noise level on neighborhoods next to the airport. It doesn't matter what the tests say are tolerable levels. At current levels, the noise of airplanes taking off is loud to disrupt neighborhoods ability to have conversations or watch TV while the windows are open. I didn't buy a home on Ratto Road because it was crazy how bad the noise level when the

1

2

planes took off next to the Bay. With an expansion of the airport, more planes will take off making the noise level intolerable. Especially if runway 10 will be utilized - which flies right OVER the homes. Even with double paned windows, the windows rattle when the planes take off from the noise. The house shakes. We deal with this everytime the Blue Angles and other private jets fly off runway 10. Not everyone can afford double-paned windows to block the noise. However, what is most disruptive is during the summer when windows and sliding doors need to be opened to allow the bay breeze to ventilate and cool the homes. Almost all the homes on Bay Farm do not have air conditioning because of the natural air condition from the Bay. We want to be able to open the windows and sliding screen doors to get fresh cool breezes during summer. The cargo planes are especially bad noise-wise as they take off during early morning hours of 2am when we have our windows open. The level of expansion is too much for the neighborhoods nearby and will affect the quality of life adversely.

I recommend just renovating/modernizing the existing terminal and if needed, adding a parking structure in place of the flat lot. Oakland Airport is a wonderful accessible, airport that is easy to get in and out of ; people fly out in and out of it for the convenience. By building it into a larger airport Oakland will lose that charm.

3

Response to Commenter P-1179

1. The commenter's statement opposition to the Proposed Project is acknowledged.
2. The commenter's statement regarding aircraft noise disrupting conversations and televisions when the windows are open is acknowledged. For a discussion on aircraft noise, see Global Response D: Noise.
3. The commenter's statement recommending just renovating is acknowledged.

Response to Commenter P-1181

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented. For a discussion of flight paths, see Global Response B: Flight Paths and Procedures.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. 9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1182**Jan Young**

I have lived near the airport for over 20 years. In recent years the Port has become such a poor neighbor by failing to limit heavy cargo take offs in the middle of the night. Fed Ex and UPS have old fleets and the jets are so LOUD. Why can't old jets like their MD 11s be taken out of service or based where a community will not be awakened every night. The noise and jet fuel dust has gotten so much worse. Our fear is more cargo and passenger flights will not only ruin our bayside habitat but also ruin the quality of life on our island city.

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

Response to Commenter P-1186

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1187**Ping Yu**

To the Port of Oakland and the City of Alameda,

I'm writing to inform you about my significant concerns regarding the proposed Oakland Airport expansion and ask you to consider and act on several fronts.

1

Key Concerns:

- Increased Noise and Air Pollution: Expanded flight operations, especially the North Field runway usage, would expose Bay Farm Island and Main Island residents and schools to escalated noise levels and jet fuel emissions. Existing South Field runway proximate neighborhoods already endure an average sound level exceeding the FAA-regulated 65dB.

2

- Health and Environmental Risks: Scientific studies, such as those conducted in residential areas of Boston, MA, underline serious health impacts from aircraft emissions, including premature death, decreased lung function, and childhood leukemia. Moreover, concerns linger regarding property value depreciation, wildlife impact, and boosted vehicular traffic.

3

Immediate Requests:

- Comprehensive Local Studies: Implement technical, localized, and independently verified studies, incorporating noise and air quality sensors at ¼ mile intervals from all OAK airport runways. The analysis should encompass all gases and pollutant concentrations, reflecting on the potential impact on residents. This data is conspicuously absent from the current DEIR.

4

- Exploration of Alternative Mitigations: Please explore and implement alternatives to mitigate noise and pollution impacts, such as mandating all commercial jets to use specific runways and altering flight patterns. 5
- Assertive Opposition from the City of Alameda: I would like to urge the City of Alameda to take a definitive stance against the expansion, reflecting the strong disapproval of its citizens. 6
- Extension of Deadline: Extend the October 16 deadline to ensure thorough due diligence and appropriately address all noise and air pollution concerns, safeguarding against immediate and future health risks. 7

Your earnest attention to these pressing issues is anticipated and much appreciated.

Response to Commenter P-1887

1. The commenter's statement regarding informing the Port about their concerns relating to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. See also Global Response A: Aviation Forecast.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
4. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-1188**Vivien Yu**

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming 1
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution 2
- Aviation is hard to decarbonize and biofuels are not the answer. 3
- It's too much noise. More Flights= More noise. 4
- Sea level rise threatens shoreline development. 5
- Labor rights are at stake. 6
- Inequity: flying is an elite privilege with high costs for everyone else. 7
- We have alternatives. Invest in Rail. 8
- We have alternatives like remote business and conferencing. 9
- We need to shift towards climate-just transportation. 10

11

Response to Commenter P-1193

- The commenter's statement regarding being seniors and wanting to live in a quiet neighborhood is acknowledged. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
- The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.

Commenter P-1196

James Zhang

I am writing to express my deep concern and strong opposition to the proposed expansion of the Oakland Airport, specifically the increase in flights and the potential frequent use of the North runway. As a concerned resident of the Bay Farm neighborhood, I am alarmed by the potential extreme damages this expansion could cause to our community and the environment.

The expansion proposal, as outlined in the Draft Environmental Impact Report, raises significant issues that cannot be overlooked. While I understand the importance of economic development, it should not come at the cost of our health, environment, and quality of life. Here are a few reasons why I believe the proposed mitigating measures fall short:

Environmental Impact: The expansion's potential to exacerbate air and noise pollution is of utmost concern. The increased flights and frequent use of the North runway would lead to higher emissions and noise levels, which could have severe impacts on both human health and local wildlife.

Health Hazards: The heightened noise levels and increased air traffic have the potential to negatively impact the physical and mental health of residents. Studies have shown a clear

link between prolonged exposure to aircraft noise and various health issues, including stress, sleep disturbance, and cardiovascular problems.

Inadequate Mitigation Measures: The proposed mitigating measures mentioned in the report do not seem to adequately address the scale of the anticipated issues. Generic solutions, such as noise insulation for a limited number of homes, do not effectively address the broader community's concerns about air quality, noise pollution, and safety.

5

Community Disruption: The expansion could disrupt the tranquility and peacefulness of our neighborhood. An increase in flights, especially during late hours, could disturb the residential area and hinder the quality of life for both individuals and families.

6

Lack of Transparency: The Environmental Impact Report appears to be heavily dense and technical, making it difficult for community members to fully comprehend its implications. I strongly urge you to extend the comment submission deadline to allow more time for residents to study the report, understand its ramifications, and formulate informed comments.

7

In light of these concerns, I urge you to reconsider the expansion proposal and to prioritize the well-being of the Bay Farm neighborhood and its residents. Economic progress should not come at the expense of our environment and health. I respectfully request that the Port of Oakland engage in a more comprehensive dialogue with the community to find solutions that balance economic interests with our collective well-being.

8

Furthermore, I kindly ask that you extend the comment submission deadline to allow for a more thorough review of the Draft Environmental Impact Report by concerned residents. This would help ensure that the community's input is adequately considered in the decision-making process.

9

Thank you for your attention to this critical matter. Please keep us informed of any developments related to this issue.

10

Response to Commenter P-1196

1. The commenter's concern and opposition to the Proposed Project is acknowledged.
2. Existing initiatives being implemented by the Port and mitigation measures for potentially significant impacts are provided throughout **Chapter 3** of the EIR.
3. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the

acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.
7. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
8. **Chapter 6** of the EIR provides information regarding public outreach associated with the publication of the Draft EIR. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
9. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
10. The commenter's statement regarding thanks for the attention to their comment is acknowledged.

Commenter P-1197
Xun Zhang

I'm writing to inform you about my significant concerns regarding the proposed Oakland Airport expansion and ask you to consider and act on several fronts.

Key Concerns:

- Increased Noise and Air Pollution: Expanded flight operations, especially the North Field runway usage, would expose Bay Farm Island and Main Island residents and schools to escalated noise levels and jet fuel emissions. Existing South Field runway proximate neighborhoods already endure an average sound level exceeding the FAA-regulated 65dB.

- Health and Environmental Risks: Scientific studies, such as those conducted in residential areas of Boston, MA, underline serious health impacts from aircraft emissions, including premature death, decreased lung function, and childhood leukemia. Moreover, concerns linger regarding property value depreciation, wildlife impact, and boosted vehicular traffic.

3

Immediate Requests:

- Comprehensive Local Studies: Implement technical, localized, and independently verified studies, incorporating noise and air quality sensors at ¼ mile intervals from all OAK airport runways. The analysis should encompass all gases and pollutant concentrations, reflecting on the potential impact on residents. This data is conspicuously absent from the current DEIR.

4

- Exploration of Alternative Mitigations: Please explore and implement alternatives to mitigate noise and pollution impacts, such as mandating all commercial jets to use specific runways and altering flight patterns.

5

- Assertive Opposition from the City of Alameda: I would like to urge the City of Alameda to take a definitive stance against the expansion, reflecting the strong disapproval of its citizens.

6

- Extension of Deadline: Extend the October 16 deadline to ensure thorough due diligence and appropriately address all noise and air pollution concerns, safeguarding against immediate and future health risks.

7

Your earnest attention to these pressing issues is anticipated and much appreciated.

8

Response to Commenter P-1197

- The commenter's statement regarding their concern for the Proposed Project is acknowledged.
- Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
- As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential

and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

4. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
5. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
6. The commenter's statement regarding the City of Alameda is acknowledged.
7. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.
8. The commenter's statement regarding attention toward the issues they raised in the comment is acknowledged.

Commenter P-1198

Lian Zhang

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.
- We have alternatives. Invest in Rail.
- We have alternatives like remote business and conferencing.

- We need to shift towards climate-just transportation.

10

Response to Commenter P-1198

1. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
2. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
4. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
5. For a discussion of aircraft noise, see Global Response D: Noise.
6. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
7. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
8. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
9. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
10. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1199**Yiming Zhang**

The airport noise level has significantly increased to affect daily life and health throughout the day, including number Fedex midnight departure. Further expansion becomes a health and safety hazard.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1200**Jasmine Zhao**

I hope this letter finds you well. I am writing to express my deep concerns and seek clarification about the proposed expansion plans for the Oakland Airport, specifically focusing on the addition of another terminal and the anticipated increase in flight operations over the residential area. As a concerned resident of this community, I believe it is crucial to address potential issues and gaps in the expansion plan, particularly in regards to the environment, public health, and quality of life for our residents.

Recent experiences have underscored the pressing nature of this matter. My family and I recently welcomed a newborn baby into our lives, a momentous occasion that should ideally be accompanied by a peaceful and nurturing environment. Unfortunately, the prevailing noise from airplanes flying over our residential area has disrupted the tranquility that our baby deserves, leading to distress and sleep disruption for both our child and our family.

This situation highlights the critical need for a comprehensive examination of the potential noise impact and its implications for our community's well-being.

While I understand that the Port of Oakland has put forth mitigation measures to address concerns, there are several points that warrant further consideration and clarification:

2

Single-Event Noise Metrics: It has come to my attention that there is a lack of comprehensive data on single-event noise metrics, which are essential for accurately assessing the noise exposure and potential hazards for our community. Without precise measurements, it becomes difficult to accurately gauge the extent of the problem, making it challenging to adequately address residents' concerns and plan effective mitigation strategies.

Toxic Air Contaminants: The expansion plans and increased flight activity are likely to result in an increase in toxic air contaminants, posing potential health risks for residents. The long-term implications of exposure to these contaminants, especially on vulnerable populations such as children and the elderly, are a significant concern. It is imperative to have a detailed plan in place to monitor and mitigate the impact of these contaminants to ensure the safety and well-being of our community.

3

Effectiveness of Mitigation Measures: The mitigation measures proposed by the Port to address noise and environmental concerns need to be rigorously evaluated to determine their effectiveness. It is essential to ensure that these measures are not only adequate but also practical in significantly reducing the adverse impact on our community's quality of life.

4

In light of these issues, I respectfully request that the Port of Oakland's Environmental Programs and Planning Division comprehensively address these concerns and provide clear explanations regarding the steps that will be taken to address the potential challenges posed by the expansion. Our community's environment, health, and well-being hang in the balance, and it is essential that these matters are treated with the utmost seriousness.

5

I appreciate your attention to these concerns and look forward to a transparent and productive dialogue. Thank you for your time and consideration. I eagerly await your response and the opportunity to discuss these matters further.

Response to Commenter P-1200

1. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. OAK is subject to the regulatory authority of the FAA and TSA; however, the airlines retain authority regarding ticket prices, destinations, markets served, flight frequency, and aircraft types. See also Global Response A: Aviation Forecast. Because the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not, any increase in air pollutant emissions or any increase in aircraft noise would occur whether or not the Proposed Project is implemented.

The commenter's statement regarding their experience with aircraft noise while

raising their newborn baby is acknowledged. For a discussion on aircraft noise, see Global Response D: Noise.

2. The commenter's statement to rigorously test the noise mitigation measures is acknowledged.
3. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.

The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.

4. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
5. The commenter's statement requesting responses is acknowledged. Responses to comments are provided in **Appendix P**.

Commenter P-1201

Too much noise. Very difficult to sleep	1
Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:	2
1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming	3
2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution	4
3. Aviation is hard to decarbonize and biofuels are not the answer.	5
4. It's too much noise. More Flights= More noise.	6
5. Sea level rise threatens shoreline development.	7

6. Labor rights are at stake.	8
7. Inequity: flying is an elite privilege with high costs for everyone else.	9
8. We have alternatives. Invest in Rail.	10
9. We have alternatives like remote business and conferencing.	
10. We need to shift towards climate-just transportation.	11

Response to Commenter P-1201

1. The commenter's statement regarding there being too much noise, making it difficult to sleep, is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.
5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.

11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1202

Li Ping Zhou

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and schools in its vicinity.

1

2

With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic.

3

Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents.

4

I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion.

5

I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

6

7

Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

8

Response to Commenter P-1202

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: "an economic or social change by itself shall not be considered a significant effect on the environment" (14 CCR §§ 15131 & 15382); "effects analyzed under CEQA must be related to a physical change" (14 CCR § 15358(b)); and "social and economic impacts alone do not constitute a significant effect on the environment" (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.

7. The commenter's statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-1203**Margaret Zhou**

As an Oakland resident who lives 10 minutes away from the Oakland International Airport, I already experience noise pollution from airplanes landing and taking off throughout the night and day. It does make a significant impact on my and my neighbors' mental health. It also causes air pollution that affects our health. I appreciate having the airport nearby and have used it a lot myself. But I think the amount of flights we have to choose from now is enough, and any more than this would be a significant burden on the quality of life for everyone in the surrounding area. If we need more selection in terms of flights we can go to the San Francisco or San Jose airports.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

- We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming
- Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution
- Aviation is hard to decarbonize and biofuels are not the answer.
- It's too much noise. More Flights= More noise.
- Sea level rise threatens shoreline development.
- Labor rights are at stake.
- Inequity: flying is an elite privilege with high costs for everyone else.
- We have alternatives. Invest in Rail.
- We have alternatives like remote business and conferencing.
- We need to shift towards climate-just transportation.

6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.

Commenter P-1204
Yun Jun Zhuo

I share many concerns with my Bay Farm Island neighbors, who strongly oppose the proposed expansion of Oakland Airport. This project will greatly impact residents and

1

2

schools in its vicinity. With an increase of departing flights and increased usage of the North Field runway that directs aircrafts over all of Bay Farm Island and Main Island, this would mean louder, more frequent noise disturbances and jet fuel released directly over Alameda residents and schools. Neighborhoods closest to the South Field runway already experience an average sound level greater than the FAA regulated 65dB from aircrafts departing from Oakland Airport. Noise and air pollution are of utmost concern, but there are many indirect impacts like decreased property values, environmental/wildlife concerns, and increased vehicle traffic. Regarding the negative and serious health impacts of aircraft emissions in residential areas, various studies indicate that impacts of aviation emissions remain under examination (Hudda, Durant, Fruin, Durant, 2020). In a study that measured gases, particles, and ultra particles in a residential area in Boston, MA, concentration of all gases and pollutants at the residential area greatly exceeded those measured at regulatory monitored sites. Another systematic review of the impact of commercial aircraft activity identified dangerous and adverse health impacts, including increased rates of premature death, preterm births, decreased lung function, oxidative DNA damage and childhood leukemia. These results show the pressing need to understand the direct impact of air pollutants from the Oakland Airport on Alameda residents. I am asking that the Port of Oakland and the City of Alameda conduct technical, localized studies that are independently verified that include noise and air quality sensors on Bay Farm Island at ¼ mile increments from each of the existing OAK airport runways. For air quality impacts, concentrations of all gases and pollutants need to be measured and examined. This is entirely missing in the current DEIR and would allow for more accurate estimated noise and air pollution impacts on the residents most impacted by this expansion. I request that the Port of Oakland explores ALL other potential options to mitigate noise and air pollution impacts (require all commercial jets to use the North Field runway, change existing flight patterns, etc.). I also request the City of Alameda take a stronger stance in opposition to the expansion. The current response is disappointingly neutral and lacks the strong dissent of their citizens.

Please extend the October 16 deadline until proper due diligence has been done and these air and noise pollution concerns have been addressed to mitigate immediate and long-term health risks.

Response to Commenter P-1204

1. The commenter's opposition to the Proposed Project is acknowledged.
2. **Chapter 2** of the EIR presents a description of the Proposed Project. No change in runway use is included in the Proposed Project. The aviation activity projected in the forecast would occur in response to market demand. The Proposed Project is intended to better accommodate the increase in aircraft operations and enplanements at industry standard levels of service. Therefore, the increase in passenger enplanements at OAK is based on forecast market demand and is forecast to occur whether the Proposed Project is implemented or not. See also Global Response A: Aviation Forecast.
3. **Sections 3.4 and 3.13** of the EIR provide an analysis of the biological resource impacts and the traffic impacts, respectively, that would occur as a result of the implementation of the Proposed Project.

Under CEQA, potential effects from implementing a project, such as reductions in property values, that are solely economic in nature would not constitute an impact to the environment, and therefore are not subject to CEQA review. Stated another way, CEQA requires an analysis of physical impacts to the environment; it does not require analysis of social and economic impacts. Specifically, CEQA guidelines state the following: “an economic or social change by itself shall not be considered a significant effect on the environment” (14 CCR §§ 15131 & 15382); “effects analyzed under CEQA must be related to a physical change” (14 CCR § 15358(b)); and “social and economic impacts alone do not constitute a significant effect on the environment” (14 CCR §§ 15064(e), 15131 & 15382).

4. As part of the air quality analysis included in **Section 3.3** of the EIR, a human health risk assessment was completed (see **Appendix E**). The analysis shows that the acute non-cancer human health hazards would be less than significant at residential and off-airport worker locations but would be considered significant at on-Airport worker locations during incremental operations of the Proposed Project. While the air quality impacts are significant and unavoidable, the Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts.
5. The air quality analysis was conducted consistent with FAA and BAAQMD methodologies for assessing the existing conditions and using nearby BAAQMD ambient monitoring data for assessing existing pollutant concentrations in the area. The BAAQMD monitors chosen are the closest most representative of the general study area. The noise analysis noise analysis is also consistent with FAA methodologies. See also Global Response D: Noise.
6. **Sections 3.3 and 3.11** of the EIR discuss air quality and noise impacts, respectively. No significant air quality or noise impacts would occur as a result of the implementation of the Proposed Project. For a discussion on flight paths, see Global Response B: Flight Paths and Procedures.
7. The commenter’s statement regarding the City of Alameda is acknowledged.
8. The comment period of the Draft EIR was extended to October 16, 2023, resulting in a 90-day comment period, which is twice as long as the 45 days required by Section 21091 of CEQA.

Commenter P-1205
Sadaya Zimmerle

I noticed that although there is a recording of the August 15 meetings, there is no recording available on your website for the Aug. 30 meetings.

Would it be possible for you to post those on the website soon?

1

Response to Commenter P-1205

1. The recordings of the public meetings are available on the project website: <https://www.oaklandairport.com/terminaldevelopment/>.

Commenter P-1206**Dragana Zivanovic**

We already have too much noise and air pollution from cars, leaf blowers, planes and our youngest generation deserves clean air to breath, clean playgrounds and life without face masks.

1

Oakland Airport is planning an expansion to add 16 new gates putting the community and climate at risk. I urge the Port of Oakland to stop the planned Oakland Airport expansion for these ten reasons:

2

1. We are in a dire climate emergency and flying fries the planet. More Flights= More Global Warming

3

2. Environmental Justice: refinery to runway, aviation exposes frontline communities to air pollution and health risk. More Flights= More Pollution

4

3. Aviation is hard to decarbonize and biofuels are not the answer.

5

4. It's too much noise. More Flights= More noise.

6

5. Sea level rise threatens shoreline development.

7

6. Labor rights are at stake.

8

7. Inequity: flying is an elite privilege with high costs for everyone else.

9

8. We have alternatives. Invest in Rail.

10

9. We have alternatives like remote business and conferencing.

10. We need to shift towards climate-just transportation.

11

Response to Commenter P-1206

1. The commenter's statement regarding there being too much noise and air pollution from cars, leaf blower, and planes is acknowledged.
2. The commenter's statement urging the Port to stop the Proposed Project is acknowledged. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
3. For a discussion of climate change, see Global Response G: Greenhouse Gas and Climate Change.
4. Air quality impacts of the Proposed Project were analyzed in **Section 3.3** of the EIR. In addition, a human health risk assessment is included in **Appendix E** of the EIR. The Port would provide electrical infrastructure throughout the terminals and cargo areas for use by commercial and cargo airlines and would install this electrical infrastructure in the new terminal and relocated cargo area to reduce impacts. For a discussion of the Port's GHG-related efforts and initiatives, see Global Response G: Greenhouse Gas and Climate Change. Also see Global Response E: Environmental Justice and Community Engagement and Global Response F: Human Health Risk Assessment.

5. For a discussion of alternative fuels, see Global Response H: Alternative Fuels.
6. For a discussion of aircraft noise, see Global Response D: Noise.
7. For a discussion of sea level rise, see Global Response G: Greenhouse Gas and Climate Change.
8. Under CEQA, discussion of labor rights is not required and is outside the scope of the EIR. However, the Port will comply with all labor regulations and address labor concerns should the Proposed Project move forward.
9. The commenter's concern regarding perceived inequities associated with air travel is acknowledged.
10. **Section 4.3** of the EIR identified and evaluated alternatives that included terminal development area alternatives, reduced impact alternatives, off-Airport alternatives, and the No Project Alternative. Some of the alternatives suggested by commenters, such as high-speed rail, investment in electricity-based modes of transportation, and conferencing, include actions that are not under the control of the Port because the Port cannot require air travelers to shift to other modes of transportation instead of aircraft or dictate how individuals conduct business. For a discussion of alternatives to the Proposed Project, see Global Response I: Alternatives.
11. The commenter's statement regarding a shift to other modes of transportation is acknowledged.
